D. M. FERRY & CO'S Seed Annual

1930

Another Worm Turns

ONCE there was a joke-smith who knew all the sure-fire hits. He could tell good ones about the mother-in-law, the two Irishmen, and the Ford, but the joke he liked best was about the highly imaginative descriptions and wonderful pictures in seed catalogues.

Then one bright September day he went to Ferry's Experimental Garden.

Here he saw a man photographing a row of Marglobe tomatoes. (See page 58.) Another was measuring with calipers the thickness of flesh in a California Wonder pepper. In the flower garden still another man was writing the catalogue description for star-phlox, carefully noting the varietal characteristics and for his colors consulting a book which contained named plates of 1092 different shades.

"Why," said the joker to the note-taker, "You all act as if Ferry's catalogue had to be as accurate as an encyclopedia!"

The note-taker looked surprised. "Of course," he answered.

The joke-smith went away, sorrowful.

Our Terms are Strictly Cash with the Order

We do not send C. O. D., as the cost of collecting return charges is quite an unnecessary item of expense and the prices being given, we can conceive of no necessity to warrant goods being so sent.

How to Send Money

Remittances may be made at our risk by any of the following methods, viz.: **Postal Money Order, Draft on New York or Chicago, or Express Company's Money Order.**

The rates charged for Postal Money Orders and Express Money Orders are now so low that these are the best ways to remit. We will bear the expense of sending money in either of these ways, or of the cost of a New York or a Chicago Draft if no more expensive than a Postal Money Order. Deduct the cost of the order from amount sent.

When Money Orders cannot be obtained, letters containing money should always be registered. Money in ordinary letters is **unsafe**. If currency is sent by express, the charges should be prepaid.

Personal Checks

If personal checks are used they should be certified, otherwise shipment of your order may be delayed pending collection.

Name and Address Should Always Be Given

Frequently we receive unsigned letters. Sometimes they contain money and orders. Sometimes too, letters are received in which the name of the town is left out and the postmark is blurred. We cannot fill orders unless we know the name and address of the buyer. The easiest way for you is to use our order sheet, filling in the blanks.

☞ Where perishable or other goods are ordered to be sent by freight or express to such great distances that the cost of transportation will nearly or quite equal the value of the goods, we must decline to ship unless purchasers remit us, in addition to the price of goods, sufficient funds to prepay transportation charges. When this requirement is not complied with, we reserve the right of declining the order and returning money to the person ordering.

In common with some other seedsmen we have, for the convenience of our customers as well as ourselves, discontinued the use of the terms bushel, peck, quart and pint and now quote all seed listed in our catalogue by weight.

Where 100 pound prices are quoted, ten pound lots of Beans, Corn, Peas, Grass, Clover, and other seeds will be supplied at the 100 pound rate.

Hundred Pound Lots

When ordered at the 100 pound rate we deliver free at depot or express office in Detroit, Mich., the freight or express charges to be paid by the party ordering.

Free of Postage or Express Charges

Packets, Ounces, Two Ounces, Quarter Pounds or Pounds, ordered at list prices, will be sent free by mail or express.

Customers ordering enough for a freight shipment, 100 pounds or more, or desiring to pay their own express charges, may deduct 8 cents per pound from the pound prices which are quoted postpaid.

Seeds by Weight

We supply **half pound** and over at **pound rates**; less than **half pound** lots are charged at **ounce, two-ounce or quarter pound rates**. We do not, however, put up **half pounds of beans, corn or peas**.

Bags

To every order for 10 pounds and upwards, of a single item to the amount of 100 pounds, **50 cents** must be added for a bag in which to ship. These bags are not returnable for credit.

Non-Warranty

Sometimes, though not often, our seeds do not come up after planting. This may be due to one or more of several reasons, such as covering too deeply or not deeply enough, too much or too little water, too cold weather or a baking sun which forms a crust too hard for the tender shoots to penetrate. Sometimes insects destroy plants at the surface, before they are seen by the gardener. We cannot personally direct the use of our goods after they leave our hands; neither can we fully control anywhere or at any time the operation of natural law as it affects seeds; therefore, we give no warranty, express or implied, as to description, purity, productiveness, or any other matter of any seeds or bulbs we send out, and we will not be in any way responsible for the crop. If the purchaser does not accept the goods on these terms they are at once to be returned.

We are not bound for any definite time or quantity by the prices quoted in this catalogue, and they are subject to change without notice. We recommend that you order as early as possible.

D. M. Ferry & Co.

NOVELTIES AND SPECIALTIES

Spinach—Giant Thick Leaved (*Nobel*)

Unquestionably this new thick leaved variety is the best in its class. It combines the rapid growing habit of the early varieties with the long standing quality of such varieties as King of Denmark and Juliana. It produces the largest plants of any variety that has come under observation at our Experimental Garden. The leaves are halberd shaped, rounded at tip, slightly crumpled but not savoyed, and because of their rapid growth are especially succulent and tender. The plants are low growing but not open or spreading as the petioles are very short for such a large leaved sort. The color is medium green. On account of its high quality and great productiveness this is recommended for home and market garden use. Being smooth leaved and therefore much easier to clean, it has proven very desirable for canning.

The originators of this variety have produced a strain that is apparently free of early bolting plants. The stock we offer has a minimum of variation in size, color and habit and will prove highly satisfactory wherever grown. The accompanying illustration shows the uniformity and vigor of our stock. (See further description, page 55.) **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 25c; Lb. 60c.**

Spinach—Long Standing Bloomsdale

In appearance of plant this new strain is much like Savoy Leaved or Bloomsdale. It shows the erect habit of Savoy Leaved but the leaves are a little larger and thicker, more crumpled, more heavily savoyed, and curl downward a little more. The leaf stems are a little shorter, making the plant more compact. The color is an attractive medium dark green. The most important feature of this new strain is that it remains for a long time in condition for use before bolting to seed. In our trials this stood through a protracted spell of dry hot weather which quickly caused the other samples of Savoy Leaved to bolt. This is about a week later than Savoy Leaved and should prove a very desirable sort to plant for succession. (See further description, page 55.) **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 25c; Lb. 60c.**

EXAMINING AND RECORDING BEET TRIALS AT OUR EXPERIMENTAL GARDEN, 1929

Beet—Detroit Dark Red

The most convincing evidence of the high standing of our strain of this well-known variety is that it is taken as the standard of comparison with other growers' strains. In the more than twenty generations of the history of this variety we have exercised the utmost care in maintaining the excellent qualities that have, for so long, made this the leader of table beets. The roots are globe shaped with small tap roots and collars and are deep ox-blood red in exterior color. The tops are medium in size and upright in growth. The leaves are dark green, shaded with red. The interior color is deep vermilion red with only a suggestion of zoning of a lighter shade.

It is nearly as early as Crosby's Egyptian and is ideal for home garden growing. The small tap roots and globe shape make it a very desirable bunching beet for market growers and its uniform solid deep red interior color make it a distinct favorite with the canners. (See further description on page 23.) **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.50.**

TYPICAL ROOTS OF DETROIT DARK RED

Tomato—Marglobe

The superior facilities of our Oakview Farm enable us to keep our stock of Marglobe true to the type set by the United States Department of Agriculture when they originated this outstanding tomato. We have retained all the original wilt-resistance, good size, globe shape, attractive color and excellent quality. The fruits of Marglobe attain an ideal shipping size before starting to change color. Its thick side walls, solid "jelly," and firm skin have led many of the largest shippers to pronounce this the superior of any variety grown.

For home and market garden it is highly desirable as a second early or main crop variety, and has proved very satisfactory as a canning sort. Trials conducted at our Experimental Garden and elsewhere have shown that the stock we offer is unsurpassed. (See illustration and further description on page 58.) **Pkt. 10c; Oz. 85c; 2 Oz. \$1.35; ¼ Lb. \$2.25; Lb. \$8.00.**

Pepper—Hungarian Yellow Wax

This is a large fruited, early, hot pepper which is highly esteemed in some sections, especially for canning. The plants are strong growing with larger, lighter colored foliage than other varieties of hot peppers and have more the appearance of the sweet pepper type. They are very productive, bearing numerous fruits which are six to seven inches long, one and one-half to two inches in diameter at stem end, tapering to a point. They are somewhat crumpled and the point is usually hooked. The color of fruits is light greenish-yellow when young, changing to orange-yellow and then to cherry-red when ripe. They are much larger and the flesh is decidedly thicker than that of any of the other hot peppers. (*See further description on page 50.*) **Pkt. 10c; Oz. 85c; 2 Oz. \$1.30; ¼ Lb. \$2.25**

Pepper—Harris' Early Giant

A variety of recent introduction which has become deservedly popular for the home and market garden on account of its large size and earliness. The plants are vigorous and sturdy, usually eighteen to twenty-four inches tall, open in habit with medium dark green foliage. They are highly productive, bearing from six to ten fruits per plant. The fruits, which closely resemble Giant Crimson, are often three to three and one-half inches wide and four and one-half to five inches long. They are medium dark green when immature, turning to a bright red when ripe. The flesh is moderately thick and of excellent quality without a trace of pungency. Our trials have shown that this is not quite as early as some of the smaller fruited varieties but is only a few days later and is surprisingly early for so large a pepper. We have found that Harris' Early Giant produced a good crop in seasons when the yield of some of the later varieties was much below normal. It will be found especially desirable for growing in the North where the season is often too short and cool for many of the large fruited varieties. (*See further description on page 50.*) **Pkt. 10c; Oz. 65c; 2 Oz. \$1.15; ¼ Lb. \$2.00**

PEPPER, HARRIS' EARLY GIANT

Pepper—California Wonder

Our expectation that this variety would prove one of the most valuable of recent introduction has been fully realized the past two seasons. The intensive breeding and selecting work done at our Oakview Stock Seed Farms have resulted in making it more uniform and have added to its many excellent qualities.

The fruits are blocky or square-shaped, slightly broader at stem end than at nose, without distinct lobing or indentations, and especially free from roughness at blossom end.

Full grown fruits commonly have a breadth of four inches and a length of four and one-half inches, and it is not unusual to find specimens weighing a full pound. They present the smooth, attractive dark green color of the Pimiento when young, turning to bright crimson as they ripen.

The plants are slightly spreading, sturdy and productive, bearing from five to nine large fruits at a setting. Although not strictly an early variety, California Wonder will produce marketable sized fruits as early as the second-early sorts.

While this new pepper possesses so many points of excellence, its most outstanding feature is the thickness of flesh. In examining hundreds of fruits during our seeding operations, it has not been uncommon to find fruits showing flesh three-eighths of an inch thick. In addition to this thickness of flesh, it is of the finest quality, being sweet, crisp and tender and entirely free from pungency.

In addition to being a very desirable home and market garden sort this is especially adapted for shipping long distances. Shipments of California Wonder to the large eastern markets have usually commanded a substantial premium above the market price for other varieties. (*See further description on page 50.*) **Pkt. 10c; Oz. 85c; 2 Oz. \$1.35; ¼ Lb. \$2.25; Lb. \$8.00**

Peas—Little Marvel

For fine table quality we doubt if there is a better pea than this. It is a dwarf variety slightly later than Nott's Excel-sior and Premium Gem but more vigorous growing with larger pods and is very productive. The pods are blunt or square ended, fully three inches long, very plump and well filled with seven to eight closely crowded peas. They are smooth and of a darker shade of green than American Wonder and present an attractive appearance on the market. Being three or four days later than Laxtonian this makes an excellent variety to plant for succession as it remains in condition considerably longer. (See further description on page 48.) **Pkt. 10c; Lb. 40c; 2 Lbs. 70c, postpaid; 100 Lbs. \$25.00.**

Broccoli—Italian Green Sprouting

This very useful variety which was recently introduced from Europe is rapidly becoming popular in the United States. It is quite distinct from the white heading broccoli. The plants are rapid growing and produce a large head at center of plant in about ninety days from date of planting. The head is a compact cluster of tightly closed flower buds and resembles cauliflower only in shape or formation, as the color is dull bluish-green. It is used without blanching and is ready for use as soon as fully developed. After this central head is removed the plant produces many branches, each bearing smaller terminal and lateral heads which are fully as desirable as the first head produced. If these heads are gathered as soon as they become large enough for use, the plant will continue to produce for a period of eight to ten weeks. The long bearing period makes this a very economical vegetable to grow. The quality is fully equal to cauliflower and by some is considered superior. The secondary heads are borne on stems from four to six inches in length and these stems are fully as desirable for use as the heads. Served in the same way as asparagus they form a very tasty and nourishing dish.

It is adapted to growing in spring, summer or fall, and is certainly much more easily and successfully grown in the northern states than cauliflower or Brussels sprouts. (See further description, page 24.) **Pkt. 10c; Oz. \$1.00; 2 Oz. \$1.75; ¼ Lb. \$3.25.**

Pumpkin—Table Queen or Des Moines (Incorrectly Called Squash)

This is one of the most useful of the many varieties of *Cucurbita pepo*. The fact that we identify it as a variety of pumpkin does not make it any less desirable. Although closely related to the other varieties of *Cucurbita pepo*, many of which were formerly called Summer Squash, it combines the quality of the true Winter Squash with the earliness of the crookneck and bush varieties.

The vine is trailing like the winter varieties but the fruits are very distinct, being acorn-shaped, measuring from four to four and one-half inches wide by five and one-half to six inches long, deeply and sharply ridged or corrugated, with smooth dark green skin.

Despite the small size of the fruits, the vines are so prolific that in weight of fruits this will be found as productive as the larger sorts.

The flesh is much lighter in color than Hubbard or Delicious but is fine grained and possesses a good flavor. When baked it cooks right out to the shell, which is thin like that of pumpkin but much tougher. The small size of Des Moines is a distinct advantage as one fruit is just large enough to serve two persons. When baked these are ideal to serve in halves. (See further description page 51.) **Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 55c; Lb. \$1.75.**

PEAS, LITTLE MARVEL

Muskmelon—Daisy

The excellent quality and fine flavor of this melon make it the most desirable of the midseason sorts for the home garden and nearby markets. The fruits are as nearly round as any melon with which we are acquainted, very slightly ribbed, dark green with light, shallow netting. They are of ideal size, running from five to six inches in diameter and weigh from two and one-half to three pounds. The flesh is a rich deep salmon-yellow in color, smooth grained and the thickest of any in its class. The skin is much like that of the Osage and Emerald Gem but is a little harder and tougher and the melons stand handling a little better.

The flavor is distinct, being exceptionally sweet and satisfying. The combination of rich color, fine grain, thick flesh and delightful flavor, is equaled by few other melons and surpassed by none.

Daisy ripens five or six days later than Emerald Gem and Extra Early Osage and on that account is ideal to plant with the earlier varieties for succession. It is vigorous in growth and very productive. We have spent much time and effort in bringing our stock of Daisy to the point where it approaches perfection in uniformity of type and quality, and we are confident that it will make enthusiastic friends of all who plant it. (See further description on page 39.)
Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 60c; Lb. \$2.00

MUSKMELON, DAISY

Muskmelon—Gold Nugget

We know this melon is deserving of a high place in any gardener's list. In size and shape Gold Nugget is the same as Netted Gem or Rocky Ford. The netting is a little heavier and the outside color shows less green. The flesh is a rich deep salmon in color and is as thick as any melon grown, making it firm and very heavy for its size. We consider this one of the best of the salmon or orange fleshed melons, and we know of no better shipping sort. You will find this a medium early variety, of fine flavor, and a high yielding sort. (See illustration and further description page 40.)
Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 55c; Lb. \$1.75.

Watermelon—Stone Mountain

As a general rule large size is attained at the expense of quality or earliness but this recent addition to the

WATER MELON, STONE MOUNTAIN

Water Melon varieties has proven an exception in both cases. It is one of the largest of melons in cultivation and is earlier than many of the older established varieties. Under favorable conditions fruits weigh from 60 to 80 pounds and will ripen in 90 to 95 days from date of planting.

The fruits are almost round, being a little longer than wide, and are slightly flattened on the ends with shallow, longitudinal creases which give the fruits a slightly ribbed appearance. The exterior color is medium deep green, faintly marked with irregular, darker veining.

The flesh is brightly colored, exceptionally solid, with fewer seeds than most varieties and is of very good quality, being sweet tender and juicy. The rind is strong enough to stand considerable handling but this melon is not recommended for shipping to distant markets. As a home garden and nearby market variety this will prove very satisfactory where an extra large, round melon of fine quality is desired. Seed white. (See further description and illustration page 41.)
Oz. 20c; 2 Oz. 35c; ¼ Lb. 60c; Lb. \$2.00.

FOUR NEW FLOWER VARIETIES

Phlox Drummondii—Star Mixed

Long blooming season, easy culture, and bright, freshly colored flowers make Phlox Drummondii one of our best annuals. The new Star Phlox shares all these qualities and has the added attractiveness of deeply cut, star-shaped flowers, somewhat smaller than our strain of regular Phlox Drummondii but even more brightly colored. They are pink, violet, crimson, or purple with darker centers and narrow white margins. (See further description on page 82.) **Oz. 90c; Pkt. 10c.**

Pyrethrum Roseum—"Painted Daisy"

Though unfamiliar to most Americans this is not strictly a new variety, for the brilliant daisy-like flowers of Pyrethrum Roseum have long been conspicuous in European gardens. We are now offering a strain which has proved perfectly adapted to North American growing conditions, is of easy culture, and has large, very brightly colored flowers. We whole-heartedly recommend it. (See further description on page 84.) **Single Mixed—Pkt. 10c.**

Sweet Peas—Early Springsong

The flowers are large, waved, of good substance, and colored a warm rose pink faintly suffused with salmon. Early Springsong is the last word in early pink sweet peas and created a sensation when introduced as a high priced florists' novelty in 1928. We have secured a supply of seed grown from the original stock and are offering it at prices which make this magnificent variety available to everybody. (See further description on page 87.) **Oz. 90c; Pkt. 10c.**

Sweet Peas—Early White Harmony

A vigorous grower with flowers nearly as large as Harmony, well waved, of exceptionally good substance, and a clear, glistening white. Though black seeded the blooms show no tinge of blush pink or lavender except when considerably past their prime. We are very much impressed by this new sweet pea and consider it the best early flowering white variety, especially for growing indoors. (See further description on page 87.) **Oz. 75c; Pkt. 10c.**

COREOPSIS—LANCEOLATA GRANDIFLORA

white variety, especially for growing indoors. (See further description on page 87.) **Oz. 75c; Pkt. 10c.**

FOUR OLD ONES THAT ARE EXTRA GOOD

Coreopsis—Lanceolata Grandiflora

One of the most satisfying perennials grown. Its bright yellow flowers on long stems are excellent for cutting while its very easy culture and long blooming season make it one of the best of the tall bedding varieties. If you do not already know Coreopsis Lanceolata Grandiflora you should get acquainted with it this year. (See further description on page 71.) **Oz. 60c; Pkt. 10c.**

Petunia—Crimson King

Petunias make an effective display over a longer season than any other bedding variety we have tried, and of all petunias Crimson King is the most richly colored. The flowers are large and a deep but very brilliant royal crimson. If you want red flowers either for the border or for massed bedding you can do no better than choose Crimson King. (See further description on page 81.) $\frac{1}{4}$ **Oz. 60c; Pkt. 10c.**

Double Portulaca

You probably need no introduction to this variety for it is already a favorite. Growing only a few inches tall but with a wide spread and very plentiful flowers, it is sometimes called "Bed of Roses." Double Portulaca never runs quite true to type, some of the flowers always reverting to the single form, but for showiness and ease of culture this variety is unsurpassed. (See further description on page 83.) **Mixed—Pkt. 10c.**

Salpiglossis

A decade ago few people knew anything about this variety except that it had a funny name, but now Salpiglossis is becoming one of our most highly prized annuals. The flowers are superbly colored, of graceful lily-like shape, and set on long stems which make them ideal for cutting. It is easily grown and should be in every garden. (See further description on page 84.) **Extra Fine Mixed—Oz. 90c; Pkt. 10c.**

FLOWERS FOR YOUR SPECIAL NEEDS

If you have a general idea of your needs but are not sure what flowers would best fill them, you will find this table a time saver. Use it, consulting the regular descriptions of varieties for details and adding the sorts which are not included, but which you know to be especially suitable for your garden.

HEIGHT OF PLANT

LESS THAN ONE FOOT TALL

(For Borders, Low Bedding or Cutting)

Alyssum
Candytuft
Cockscomb
Forget-Me-Not
Godetia
Marigold, French
Mignonette
Nasturtium, Dwarf
Pansies
Pinks
Petunia, Dwarf
Poppy, American Legion
Texas Blue Bonnet
Verbena
Zinnia, Mexicana

ONE TO TWO FEET TALL

(For Bedding or Cutting)

Balsam
Calendula
Carnation
Centaurea
Chinese Forget-Me-Not
Coreopsis
Escholtzia (California Poppy)
Gaillardia
Love-in-a-Mist
Nasturtium, Trailing
Petunia, Hybrida
Phlox
Poppies (tall varieties)
Snapdragon, Semi-Dwarf
Stock
Sweet William*

TWO TO THREE FEET TALL

(For Bedding or Cutting)

Aster
Canterbury Bell*
Celosia, Feathered
Four O'Clock
Foxglove*
Gladiolus
Helichrysum
Larkspur
Marigold, African
Mourning Bride
Nicotiana
Salpiglossis
Salvia
Snapdragon, Tall
Zinnia, Double Giant

OVER THREE FEET TALL

(For Backgrounds)

Canna
Castor Beans
Cosmos
Hollyhock*
Kochia
Love Lies Bleeding
Sunflower
(**Climbers**)
Balloon Vine
Cobaea Scandens
Hyacinth Bean
Ipomoea
Moon Flower
Morning Glory
Scarlet Runner Beans
Sweet Peas

FLOWERING SEASON

LATE SPRING

(Before June 25) †

Anemone*
Canterbury Bell*
Columbine*
Coreopsis, Lanceolata Grandiflora*
Delphinium, Perennial*
Foxglove*
Gaillardia, Grandiflora*
Sweet Peas, Early Flowering*
Sweet William*

EARLY SUMMER

(June 25 to August 1) †

Alyssum
Clarkia
Gladiolus
Gypsophila
Hollyhock*
Pansy
Petunia
Pinks
Portulaca
Sweet Peas, Spencers
Sweet William*
Verbena

LATE SUMMER

(August 1 to September 21) †

Alyssum
Aster
Celosia
Four O'Clock
Marigold
Petunia
Phlox
Poppy
Portulaca
Salpiglossis
Sunflower
Zinnia

AUTUMN

(After September 21) †

Alyssum
Calendula
Carnation
Cosmos
Dahlia
Kochia
Nemesia
Pansy
Petunia
Phlox
Snapdragon

COLOR OF FLOWERS

WHITE

Alyssum
Candytuft, Rocket
Moon Flower
Shasta Daisy

Also the white named varieties of

Aster, Cosmos, Escholtzia, Gladiolus, Larkspur, Phlox and Sweet Peas

YELLOW OR ORANGE

Afghan Gilliflower
Calendula
Coreopsis
Marigold
Sunflower

Also the yellow and orange named varieties of

Celosia, Chrysanthemum, Gladiolus, Pansy, Portulaca and Zinnia.

BLUE

Blue Lace Flower
Chinese Forget-Me-Not
Forget-Me-Not
Love-in-a-Mist

Also the blue named varieties of

Bachelor's Button, Larkspur, Pansy and Sweet Peas.

RED

Salvia
Scarlet Runner Beans
Tritoma

Also the red named varieties of

Aster, Gladiolus, Petunia, Phlox, Poppy, Verbena, Sweet Peas and Zinnia.

ESPECIALLY SUITABLE FOR CUTTING:—Aster, Calendula, Carnation, Columbine*, Coreopsis, Foxglove*, Gladiolus, Gypsophila, Marigold, Mourning Bride, Salpiglossis, Sweet Peas, Zinnia.

FOR WINTER BOUQUETS:—Acroclinium, Cockscomb, Globe Amaranth, Gypsophila, Helichrysum, Job's Tears, Rhodanthe, Statice.

NEED LEAST CARE:—Chinese Forget-Me-Not, Coreopsis Lanceolata Grandiflora, Kochia, Love-in-a-Mist, Larkspur (Annual), Portulaca.

WITHSTAND DROUGHT WELL:—Alyssum Carpet of Snow, Arctotis, Dimorphoteca, Escholtzia (California Poppy), Four O'Clock, Petunia, Portulaca.

FOR SEMI-SHADY PLACES:—Anemone, Canterbury Bell, Clarkia, Columbine, Coreopsis Lanceolata Grandiflora, Daisy, Foxglove, Forget-Me-Not, Godetia, Larkspur, Matricaria, Pansy, Scarlet Flax, Schizanthus, Snapdragon.

* From seed sown the previous year.

† For the latitude of Detroit. In general, each hundred miles either north or south makes a difference of five days in date of bloom. However, if you live either on the Pacific coast or in the far south, this table of flowering seasons will be of little use to you.

Harvesting beet seed at Oakview 1929. It requires two seasons to produce beet seed. Much hand work is necessary in the production of a crop

Caring for a crop of carrot seed at the full bloom stage. This is another two-year crop. Clean culture is the law of Oakview

A Word to Housewives about Waterless Cooking

Do you sometimes tire of the monotony of preparing your daily meals? Waterless Cooking provides variety and offers opportunities to realize undreamed of possibilities in the way of new dishes from the same old familiar ingredients.

If you have not already adopted this new and easy means of cooking or if you have not sampled any of the countless number of tempting foods prepared by this method, there is a new and delightful experience awaiting you, your family and your guests.

Most of the familiar, old-fashioned recipes for cooking vegetables call for boiling a given length of time and then, "Drain thoroughly, season to taste and serve with drawn butter or your favorite sauce."

Waterless Cooking eliminates this most wasteful practice in cooking. Only sufficient water to form steam—not more than three or four spoonfuls—is all that is required and the food is cooked in a brew of its own juices. As none of the juices can escape they are used to form the basis of the sauce or gravy to serve with the meat or vegetable from which the juices came.

An old French proverb says: "Water is foe to all flavor." Water, clear and tasteless in itself, gets into the flesh of fruits, vegetables and meats, and makes their flavors also nearer clear and tasteless.

Make this little test. Cook carrots in the usual way in a quantity of water. Instead of draining remove the carrots and boil down the water. There will be a thick residue of true carrot sugar, some of the health value that usually is poured into the sink. Other vegetables will show a similar result. For the sake of our health and that of our children this harmful waste can not be checked too soon.

Waterless Cooking not only simplifies the problem of what to cook, it lightens the work of cooking and does away with the necessity of keeping a careful watch to see that dishes do not boil dry or boil over. There is an important saving in fuel as most of the cooking is done over a low fire. Since the utensils for Waterless Cooking are designed to hold all of the steam generated, there are no escaping odors. Highly nutritious foods, such as sauerkraut, which are often left out of the menu because of their unpleasant odor, can be served more often without danger of the odor reaching beyond the confines of the utensils in which they are cooked.

Why are we interested in Waterless Cooking? Because it enhances the value of vegetables by preserving all of their nutritional content and makes them much more appetizing by bringing out the best there is in them of quality and flavor. People who learn to expect the highest quality obtainable in vegetables will demand Ferry's Seeds.

How to increase the possibility of SUCCESS WITH YOUR GARDEN

Good Soil

A rich, sandy loam is the best, but a fair degree of success may be secured from any soil which can be made rich and friable. Vegetables of the best quality cannot be grown on barren sand, a cold, hard, lumpy clay, nor in the shade of orchard or other trees.

Liberal Manuring

Well decomposed stable manure where straw bedding has been used is the best; manure where sawdust has been used for bedding is not so good. Often wood ashes at the rate of one peck up to one bushel to the square rod will be of great benefit.

When good stable manure is not available, commercial fertilizers may be used at the rate of four to twelve pounds to the square rod and the more concentrated forms, such as Nitrate of Soda, Guano, Dried Blood and Potash Salts, at the rate of one to six pounds to the rod, the larger amounts preferably in three or four applications and at intervals of about ten days. A mass or lump of any of the commercial fertilizers, even if it is but a quarter of an inch in diameter, is liable to kill any seed or young plant which comes in contact with it, so it is very important if such fertilizers be used that they be thoroughly pulverized and mixed with the soil.

Thorough Preparation

Rich soil and liberal manuring will avail little without thorough preparation. The soil must be made friable by thorough and judicious working; if this is well done all that follows will be easy; if it is neglected, only partial success is possible and that at the cost of a great deal of hard work.

The garden should be well plowed or dug to a good depth, taking care, if it is a clay soil, that the work is not done when it is too wet. If a handful from the furrow moulds with slight pressure into a ball which cannot be easily crumbled into fine earth again, the soil is too wet and if stirred then will be hard to work all summer. The surface should be made as fine and smooth as possible with the harrow or rake. It is generally desirable to plow the whole garden at once and to do this in time for the earliest crops, but the part which is not planted for some weeks should be kept mellow by frequent cultivation.

Good Seeds Properly Planted

There is no more prolific source of disappointment and failure among amateur gardeners than hasty, careless or improper sowing of the seed. A dry seed may retain its vitality and remain unchanged for years, but after germination has commenced a check of a day or two in the process may be fatal. There is no time in the life of a plant when it is so susceptible of injury from the over-abundance or want of sufficient heat and moisture as at the period between the commencement of germination and the formation of the first true leaves. It is just then that the gardener should aid in securing favorable conditions. These are:

FIRST—A proper and constant degree of moisture. The soil should always be moist, never wet. To secure this cover the seed as soon as it is planted with well pulverized, freshly prepared earth pressing it firmly over the seed. This firming of the soil is very important as it brings the particles of earth into close contact with seeds and roots, prevents the drying out of the soil and facilitates quick growth. The best results are obtained in small gardens by laying a board on the row and then walking upon the board, or the back of the hoe may be used, but for truck farms and field crops a roller is equally satisfactory.

SECOND—A proper degree of heat, secured by sowing the seed when the temperature of the soil is that most favorable to the germination of the seed of that particular plant. Too high a temperature is often as detrimental as one too low. The proper temperature for each sort may be learned from a careful study of the following pages and the experience of the most successful gardeners in your vicinity.

THIRD—Covering the seed to such a depth that while a uniform degree of heat and moisture is preserved the necessary air can readily reach the germinating seed and the tiny stem push the forming leaves into the light and air. This depth will vary with different seeds and conditions of the soil and can be learned only from practical experience. In general, seeds of the size of the turnip should not be covered with more than half an inch of earth pressed down, while corn may be an inch, beans an inch to two inches and peas one to three inches deep.

FOURTH—Such a condition of soil that the ascending stem can easily penetrate it and the young roots speedily find suitable food. We can usually secure this by thorough preparation of the ground and taking care never to sow fine seeds when the ground is wet. Occasionally a heavy or long continued rain followed by a bright sun will so bake and crust the surface that it is impossible for the young plant to find its way through it, or a few days of strong wind will so dry the surface that the young plants will be killed. In such cases the only remedy is to plant again.

Judicious Cultivation

Not only should every weed be removed as soon as it appears, but the crust which forms after a rain should be broken up and the ground stirred as soon as it is dry enough to permit it. The more frequently and deeply the soil is stirred while the plants are young, the better, but as they develop and the roots occupy the ground, cultivation should be shallower until it becomes a mere stirring of the surface. The yield and quality of vegetables have often been decidedly lowered by injudiciously deep and close cultivation after the roots of the plants had fully occupied the ground. A very small garden, well cultivated and cared for, will give larger returns and be in every way more satisfactory than a much larger one poorly prepared and neglected.

Mulching

Most of the work outlined in the foregoing paragraph can be avoided and better results obtained by the use of Gator Hide Mulch paper. Read carefully page 12.

Starting Plants Indoors

Earlier crops of many kinds of vegetables may be obtained by planting the seeds early in boxes indoors and setting out the plants later after the weather has become warm and settled. Plants of such vegetables as tomato, pepper, egg plant, celery and often cucumber and melons are usually started in this way, also many flowering plants requiring a long season to bloom. Shallow wooden boxes three to four inches deep of a size convenient to handle are generally used for this purpose.

The boxes should be filled with good garden soil preferably a light sandy loam and the rows planted about two inches apart. The box should be placed in a window where it will have plenty of light. Care should be taken to keep the soil moist. When the seedlings are about an inch high they should be transplanted to other boxes setting them at least two inches apart each way. If the plants tend to become tall and spindling they should be moved to a cooler situation. Before being set in the open ground the plants should be gradually hardened off; to do this set the boxes outdoors on mild days covering them at night until they are able to stand the weather without damage.

How to Build and Manage Hotbeds

For early vegetables, some provision for starting certain plants earlier than can be done in the open air is desirable; for this purpose nothing is better than a good hotbed and its construction is so simple and the expense so slight that every garden should have one. A hotbed proper not only protects the plants from the cold, but supplies bottom heat. By this term the gardener means that the soil is constantly kept several degrees warmer than the air above, that being the condition so far as heat is concerned, which is most favorable for rapid and vigorous growth, and gardeners usually secure it by making a compact pile of some fermenting material and covering it with the earth in which the plants are to grow.

Heating Material

The best heating material that is easily available is fresh horse manure, containing a liberal quantity of straw bedding. What is wanted in the hotbed is a steady and moderate, but lasting heat. To secure this, the manure should be forked over, shaken apart and if dry, watered and allowed to stand a few days and then be forked over again, piled and allowed to heat a second time, the object being to get the whole mass into a uniform degree of fermentation and as soon as this is accomplished it is fit for use.

The increasing difficulty of obtaining heating material for hotbeds has compelled many market gardeners to adopt a method of using artificial heat. This is done by substituting hot water coils for the manure and installing a small heater. A properly installed heating plant for the hotbed will be found more efficient and satisfactory and it is permanent. A small heating plant can be installed and operated at moderate cost.

Sash

Some gardeners use sash made especially for hotbeds and glazed with small lights cut from odds and ends and so furnished at very low rates. Such sash can usually be procured in any of our large cities and costs much less than if made to order. For garden use, however, we much prefer a smaller sash that can be easily handled and the use of larger and better glass. We recommend that for home gardens the sash be about two and one-half by four or five feet and that the glass be not less than 10 x 14, laid with not more than one-quarter inch lap. In giving the order to one unaccustomed to the work, it would be well to state what they are to be used for, and that they need to be made like skylight sash.

Frame

This may be made of sound one-inch lumber, the back twelve to fourteen inches high, the front ten to twelve. It should be well fitted to the sash so as to leave as little opening as possible and yet allow the sash to be easily moved up and down, even when the frame is quite wet.

The Soil

This should be light, rich, friable. Any considerable amount of clay in it is very objectionable. If possible, it should be unfrozen when put into the bed; for this reason it is much better to prepare it the fall before and cover the pile with enough coarse manure or straw to keep out the frost.

Making the Bed

This requires careful attention as future success depends largely upon the manner in which this work is done. Having cleared away snow and ice, build a rectangular bed one foot larger each way than the frame to be used. Carefully shaking out and spreading each forkful of manure and repeatedly treading it down so as to make the bed as uniform as possible in solidity, composition and moisture. It is of the utmost importance that this shaking apart and evenly pressing down of the manure should be carefully and thoroughly done; unless it is, one portion will heat quicker than the other and the soil will settle unevenly, making it impossible to raise good plants.

The proper depth of the bed will vary with the climate, season and the kind of plants to be raised. A shallow bed will quickly give a high temperature which will soon subside; a deeper one, if well made, will heat more moderately, but continue much longer. For general purposes, a bed about two feet deep will be best.

The bed completed, the frame and sash may be put on and fresh manure carefully packed around the outside to the very top (if the weather is at all severe, this outside banking should be replenished as it settles). The bed should then be allowed to stand with the sash partially open for a day or two to allow the steam and rank heat to pass off.

The earth should then be evenly distributed over the surface of the bed and carefully leveled. The earth should not be shoveled or dumped in one or more places in the bed and then leveled; if this is done uneven settling of the bed invariably results. Care should be taken that the soil is dry and friable. If wet or frozen soil must be used, it should be placed in small piles until well dried out before spreading. The heat at first will be quite violent, frequently rising to 120 degrees, but it soon subsides and when it recedes to 90 degrees the seed may be planted. The importance of using dry soil and allowing the first rank heat to pass off is very great. Every season thousands of hotbeds fail of good results from these causes and seedsmen are blamed for failure resulting from overheat, or wet, soggy soil.

Management of the Bed

The essentials for success are a steady uniform degree of heat and moisture; keeping the soil at all times a few degrees warmer than the air and the careful "hardening off" (by exposure to the air and diminishing the supply of water) of the plants before transplanting into the open air. Simple as these may seem to be, there are many difficulties in the way of securing them, prominent among which is overheating the air under a bright sun.

Without experience one would scarcely believe how quickly the temperature inside of a well built hotbed will rise to 90 or 100 degrees upon a still, sunny day, even when the temperature outside is far below freezing, or how quickly the temperature will fall to that outside, if upon a windy, cloudy day the sash is left open ever so little. A rush of cold air driven over the plants is far more injurious than the same temperature when the air is still. Again, in cloudy weather, a bed will go several days without watering, but will dry up in an hour when open on a sunny day.

Cold-Frame

A cold frame is a simple construction of boards for wintering over young plants, Cabbage, Lettuce, Cauliflower, etc., and is also useful to protect and harden off plants from the greenhouse or hotbed before fully exposing them in the open air.

Select a dry, southern exposure, form a frame from four to six feet wide and as long as required. The back should be fourteen to eighteen inches high and the front eight to twelve, with a cross-tie every three feet. The frame may be covered with sash or cloth. Seeds of the vegetables to be wintered, sown in open border early in September, will be ready to plant in cold frames about the last of October. The soil should be well prepared and smoothly raked before planting. Admit air freely on pleasant days, but keep close in severe weather.

These frames are particularly useful in the south and may be covered more cheaply with cloth shades than by sash. The shades are made as follows: Make light but strong wooden frames to fit over the bed and of a width to receive some common brand of cotton cloth. The cloth may be unbleached and should be stretched over and securely tacked to the frames. We have found that Plant Bed Cloth, which we have for sale, is superior to any ordinary cloth for this purpose.

Transplanting

In transplanting, the main points to be regarded are: Care in taking up the plants so as to avoid injury to the roots, setting out as soon as possible to prevent the air coming in contact with the roots, setting firmly so as to enable the plant to take a secure hold of the soil and shading to prevent the hot sun from withering and blighting the leaves. Where a rank or soft growth of tops has been made in hotbed it is frequently desirable to trim off some of the larger leaves before taking up to transplant; this will retard too rapid evaporation of moisture from the plant and usually will prevent wilting.

In transplanting from a hotbed, harden the plants by letting them get quite dry a day or two before, but give an abundance of water a few hours before they are taken out. It is most apt to be successful if done just at evening, or immediately before or during the first part of a rain, about the worst time being just after a rain, when the ground being wet it is impossible to sufficiently press it about the plant without its baking hard. If water is used at all it should be used freely and the wet surface immediately covered with dry soil.

Watering

The best time to water plants is early in the morning or in the evening. Water may be given to the roots at any time, but should never be sprinkled over the leaves while they are exposed to bright sunshine. If watering a plant has been commenced, continue to supply it as it is needed, or more injury than good will result from what has been given. One copious watering is better than many scanty sprinklings. The ground should always be stirred with a hoe or rake before it becomes so very dry as to cake or crack.

ILLUSTRATED AND DESCRIPTIVE CATALOGUE OF VEGETABLE SEEDS

WITH GENERAL DIRECTIONS FOR CULTIVATION

The varieties in each class (for example, Wax Podded Beans) are usually arranged in their order of earliness. It should always be remembered that many vegetables are much affected in their habit of growth of plant and size, form and quality of the fruits by conditions of soil, climate, location and mode of culture which are often beyond our control, and our descriptions are for what may be expected under conditions that are approximately normal and favorable for good development.

The cultural directions in this catalogue are necessarily limited but they are as complete as space permits. For additional cultural information see list of books on the inside of back cover of this Seed Annual.

ARTICHOKE

The seed we offer is that of the true artichoke which is an extensively used vegetable in Europe. In it the edible portion is the thickened scales at the base of the flower-heads or buds. The plant is very different from what is known in America as Artichoke or Jerusalem Artichoke, in which the edible portion is the tuber.

In February or March sow and transplant in hotbed so as to give plenty of room until danger of frost is over. Then set in very rich, well drained soil in rows four feet apart and two feet apart in the row. The plants can be raised in seed beds out of doors, but in that case will not be likely to produce heads the first year. Late in the fall cut off the old tops and thoroughly protect the crowns with leaves or straw to prevent severe freezing.

The second year thin the starting shoots to three of the best, which will commence to form heads about July 1st. The plants may also be blanched like cardoons. This is done by cutting back the stems close to the ground in July, the rapidly growing shoots which then start up may be tied and blanched like celery. As artichoke plants do not yield satisfactorily after three or four years, it is best to start a new plantation as often as once in three years.

Green Globe The plant of this variety is of medium height with rather deep green leaves. The buds or flower-heads are green, nearly round or somewhat elongated. The scales are rather narrow and spiny, and are moderately fleshy at the base. **Pkt. 10c; Oz. \$1.00; 2 Oz. \$1.60; ¼ Lb. \$2.75; Lb. \$10.00**

ASPARAGUS

This is one of the earliest and most delicious of spring vegetables. We strongly urge all those having enough available space to put in a bed for their own use, following carefully the cultural directions given below.

Beds are usually formed by setting roots which can be procured of us. If you wish to grow plants from the seed yourself, pour warm water on the seed and allow it to stand until cool; pour it off and repeat two or three times with fresh warm water. Sow in spring in drills about eighteen inches apart and two inches deep in light, rich soil, planting fifteen to twenty seeds to each foot of row. When the plants are well up, thin to about one inch apart and give frequent and thorough cultivation during the summer. If this has been well done, the plants will be fit to set the next spring.

The permanent beds should be prepared by deep plowing or spading and thoroughly enriching the ground with stable manure or other fertilizer; a moist, sandy soil is best. If the subsoil is not naturally loose and friable, it should be made so by thoroughly stirring with a subsoil plow or spade. Set the plants about four inches deep and one to two feet apart in rows four to six feet apart. After the plants are well started, give frequent and thorough cultivation. Early the next spring spade in a heavy dressing of manure and about one quart of salt and double the quantity of fresh wood ashes to each square rod and cultivate well as long as the size of plants will permit, or until they begin to die down. The next season the bed may be cut over two or three times, but if this is done, all the shoots, no matter how small, should be cut. After the final cutting, give a good dressing of manure, ashes and salt. Cultivate frequently until the plants meet in the rows.

In autumn after the tops are fully ripe and yellow, they should be cut and burned. A bed fifteen by fifty feet, requiring about one hundred plants, if well cultivated and manured, should give the following season an abundant supply for an ordinary family and continue productive for eight or ten years.

Palmetto A very early maturing and prolific variety, producing an abundance of very large, deep green shoots of the best quality.

SEED—Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 30c; Lb. \$1.00

ROOTS—Postpaid, \$1.50 per 100

By freight, express or parcel post, not prepaid, \$1.25 per 100; \$9.00 per 1000

Martha Washington A vigorous growing and very productive variety which has been bred to resist the disease known as "Asparagus Rust." The most uniform in type of any of the so-called rust resistant varieties. The shoots are of large size, excellent quality and of rich deep green color tinted somewhat with purple at tips.

SEED—Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 60c; Lb. \$2.00

ROOTS—Postpaid, \$1.75 per 100

By freight, express or parcel post, not prepaid, \$1.50 per 100; \$10.00 per 1000

Mary Washington A selection from Martha Washington, being earlier and a little more vigorous. Stalks slightly oval in shape and of fine quality.

SEED—Pkt. 10c; Oz. 25c; 2 Oz. 40c; ¼ Lb. 75c; Lb. \$2.50

ROOTS—Postpaid, \$2.00 per 100

By freight, express or parcel post, not prepaid, \$1.75 per 100; \$12.00 per 1000

PALMETTO

Not less than 25 roots at the 100 rate. We do not offer two year old roots, as experienced growers have found that better results are obtained with the one year old roots.

BEANS

No crop responds more readily than Beans to good soil and cultivation. A light, rich, well drained loam which was manured for the previous crop is the most desirable. If too rank manure is used it is apt to make the plant run too much to vine.

Beans are very sensitive to both cold and wet and it is useless to plant them before the ground has become dry and warm. The largest returns will result from planting in drills from two to three feet apart. Cover the seed one and one-half to two inches deep and thin the young plants three to six inches apart in the row. If planted in hills, make the hills about two feet apart each way. For succession, plant at intervals of one to two weeks till midsummer. The plants up to the time of blossoming should have frequent shallow cultivation, but any mutilation of the roots by cultivation after the plants come into bloom is likely to cause the blossoms to blast and so cut off the crop. Cultivation should always be very shallow and it is useless to expect a crop from a field so poorly prepared as to need deep stirring after planting.

We give careful attention to selecting and improving the different varieties and keeping them pure and we invite the most critical comparison of our stocks with those of any other grower.

The varieties of garden beans we offer have been separated for convenience into five groups: Wax Podded Dwarf or Bush sorts, Green Podded Dwarf or Bush sorts, Dwarf Limas, Pole or Running sorts and Pole Limas. Nearly all of these sorts, except the Limas, are suitable when young for use as snaps, which in some localities are called "snapshots." The low growing sorts are called Bunch beans in some sections. In northern latitudes the term "butter-beans" is often applied to low growing wax podded sorts. In the south, however, the term "butter-beans" is usually applied to limas.

DWARF OR BUSH—WAX PODDED SORTS

Challenge Black Wax Continued experience has satisfied us of the great merit of this variety as the earliest wax podded bean. In all our many comparisons of this bean with other extra early sorts, we have found it the first to give a full picking of pods which were of very excellent quality. The plants, although small, are compact and erect, bearing pods well up from the ground. The pods are an attractive medium yellow in color, medium sized, about four and one-fourth inches long, roundish oval, considerably curved, fleshy, crisp, tender and stringless. Seed jet black, longer and more curved than Prolific Wax. We consider this the best first early wax bean for the home or market garden. **Pkt. 10c; Lb. 45c; 2 Lbs. 80c. postpaid; 100 Lbs. \$28.00**

Ferry's Golden Wax This is one of the earliest and best dwarf sorts for the home market and private gardens. The plants are erect, compact, and very productive. The pods are of medium length, four and one-half to five inches, nearly straight, broad, flat, golden yellow, very fleshy and wax-like. The variety cooks quickly as snaps, shelling well when green, and is of superior quality used in either way. Seed medium sized, oval, white, more or less covered with two shades of purplish red. The amount and shade of color on this and all parti-colored beans will be affected greatly by conditions of soil and ripening. This very extensively used sort was introduced by us in 1876. We are convinced by many careful tests that none of the so-called improved strains is equal to the seed we offer of this standard variety. **Pkt. 10c; Lb. 50c; 2 Lbs. 90c. postpaid; 100 Lbs. \$30.00**

Michigan White Wax This splendid variety is one of the earliest dwarf snap beans. It is a white-seeded Golden Wax bean of the original Golden Wax quality. It is a vigorous and very productive garden variety. The pods are abundantly produced and are uniform in size and color which is a very attractive light golden yellow. They are four and one-half to five inches long, comparatively broad, meaty and of the same superior quality as our Golden Wax. Seed medium sized, oval, clear white. It is a most desirable home garden, market and canning sort. **Pkt. 10c; Lb. 45c; 2 Lbs. 80c. postpaid; 100 Lbs. \$28.00**

Grenell Rust Proof Wax The plants are a little more up-right and hardier than our Golden Wax. The handsome deep yellow pods are about five inches long, are broader and flatter than our Golden Wax but are slightly inferior in quality. This variety is sometimes called an Improved Golden Wax and is popular with some gardeners. **Pkt. 10c; Lb. 45c; 2 Lbs. 80c. postpaid; 100 Lbs. \$28.00**

Refugee Wax The stock we offer is very productive, early and of superior quality. The plants are very vigorous and branching. The pods are four to five inches long, thick, fleshy, round, stringless and wax-like, being of a clear, light yellow color. Seed medium sized, cylindrical, rounded at ends, yellowish drab, heavily splashed with a bluish black. **Pkt. 10c; Lb. 40c; 2 Lbs. 70c. postpaid; 100 Lbs. \$25.00**

Prolific Black Wax The improved strain of Black Wax we offer under this name is exceptionally productive, very hardy, reliable and of the best quality. It is very extensively used for snaps for the home garden and market. The plants are medium sized, erect in growth, with small foliage, very vigorous, early intermediate in season with longer bearing period than most sorts. The pods are of medium length, four and one-fourth to four and one-half inches, borne well up from the ground, curved, cylindrical and fleshy. They are of a clear, light golden yellow color and remain a long time in condition for use as snaps. Seed small, oblong, jet black. **Pkt. 10c; Lb. 40c; 2 Lbs. 70c. postpaid; 100 Lbs. \$25.00**

Pencil Pod Wax This very handsome black wax sort is medium early, fairly hardy and productive. It is one of the very best sorts for home use and for near markets where highest quality is desired. The plants are strong growing with roughened leaves. The pods are long, five and one-half to six inches, straight, round, fleshy and of a bright yellow color. They are tender, absolutely stringless and are produced through a long season. Seed long, round, medium sized, solid black. **Pkt. 10c; Lb. 40c; 2 Lbs. 70c. postpaid; 100 Lbs. \$25.00**

MICHIGAN WHITE WAX

Not less than 10 pounds at the 100 pound rate. One hundred pound prices do not include transportation: if ordered shipped prepaid add 8c. per pound to the 100 pound price. We do not put up half pounds of beans.

BEANS—DWARF OR BUSH

WAX PODDED SORTS—Continued

Currie's Rust Proof Wax It has been claimed that this variety, usually midseason but sometimes earlier maturing, is absolutely rust proof and we have found it as nearly rust proof as any wax podded bean. The plants are very vigorous, hardy and productive. The pods are light yellow, similar in shape to Golden Wax but longer, about five and one-half to six inches in length. Seed long, oval, rounded at ends, medium sized, purplish black. This is a well known market gardening and truckers' sort in some sections. **Pkt. 10c; Lb. 45c; 2 Lbs. 80c postpaid; 100 Lbs. \$28.00**

Sure Crop Wax A vigorous growing, very productive variety, similar in general appearance of plant and seed to Currie's Rust Proof Wax; the pods, however, are more fleshy, of decidedly better quality and are stringless at practically all stages of growth. Pods about six inches long, nearly round, attractive in color and remain a long time in condition for snaps. Seed long, oval, rounded at ends, medium sized, purplish black. A desirable variety for either the home or market garden. **Pkt. 10c; Lb. 50c; 2 Lbs. 90c postpaid; 100 Lbs. \$30.00**

Unrivald Wax The pods of this dwarf variety are longer than Golden Wax and a little lighter in color, are rather narrow and somewhat flattened but fleshy. This variety usually matures soon after our Golden Wax and is sometimes as early. The plants are large and vigorous with leaves similar to Golden Wax in color and shape but are a little larger. The plants when well grown are borne in abundance well up from the ground. Seed small, flat, slightly kidney shaped; color ochre-brown. This sort is suitable for market gardeners and is also used for the home garden. **Pkt. 10c; Lb. 50c; 2 Lbs. 90c postpaid; 100 Lbs. \$30.00**

Wardwell's Kidney Wax This standard variety maturing a little later than Golden Wax, yields a large crop of long, nearly straight, broad, light golden yellow, handsome pods. These are of large size, about six inches long, and are of good quality. They always command a ready sale, making the variety one of the most profitable for the market gardener as well as shipper. This is also very extensively used for snaps for the home garden. The plants are strong growing and bear their long pods well up from the ground. The leaves are large, broad and slightly roughened. Seed large flattened, kidney shaped, white with dark markings about the eye. **Pkt. 10c; Lb. 50c; 2 Lbs. 90c postpaid; 100 Lbs. \$32.00**

Stringless Kidney Wax This variety is also known as New Kidney Wax. Plants of erect bushy habit, eighteen to twenty inches high, robust in growth and very prolific. Pods rich creamy white, six to seven inches long, somewhat flattened but very thick and fleshy; stringless and of excellent quality. Pods in general appearance are about half way between Wardwell's Kidney Wax and Round Pod Kidney Wax and combine the good qualities of both these varieties. Seed medium large, slightly flattened, white with dark marking about eye. **Pkt. 10c; Lb. 55c; 2 Lbs. \$1.00 postpaid; 100 Lbs. \$37.00**

Davis Wax This is also called Davis White Kidney Wax. It is a well known market sort, much used for shipping. The plants are very hardy and productive and the variety is very desirable where a handsome wax-podded, white seeded intermediate sort is wanted. The plants are very vigorous. The pods are remarkably long, about six inches, sometimes longer. They are handsome, light yellow, straight, very attractive and when young are crisp and tender. The dry beans are excellent for baking. Seed medium large, kidney shaped, clear white. **Pkts. only 10c.**

Round Pod Kidney Wax A very handsome midseason variety, especially desirable for snaps for the home garden. The plants are of strong growth, spreading and very productive. The leaves are large, broad and roughened. The pods are long and round, five and one-half to six inches, slightly curved, light yellow, wax-like, stringless and of the very best quality. Seed long, cylindrical, medium sized, nearly white with a little dark marking about the eye. **Pkt. 10c; Lb. 50c; 2 Lbs. 90c postpaid; 100 Lbs. \$32.00**

Violet Flageolet Wax This sort is known also as Perfection Wax. The pods are very large, and are very similar to those of Scarlet Flageolet Wax. When well grown this is one of the most showy wax varieties. Seed large, flat, dark violet. **Pkt. 10c; Lb. 40c; 2 Lbs. 70c; 10 Lbs. \$25.00**

Hodson Wax The plants of this late maturing variety are exceedingly vigorous, hardy and productive. It is rust resistant and is becoming popular with shippers. This variety is very well adapted for market gardening purposes on account of its vigor of growth, productiveness, handsome pods and freedom from bean diseases. The pods are handsome, clear creamy white, very long, about six to seven inches, straight or slightly curved, flat but fleshy and of good quality. They are crisp and tender if picked when quite young. Seed long, cylindrical, uniform in shape; color dull purplish red splashed with pale buff. **Pkt. 10c; Lb. 50c; 2 Lbs. 90c postpaid; 100 Lbs. \$30.00**

ROUND POD KIDNEY WAX

BEANS—DWARF OR BUSH

GREEN PODDED SORTS

The green podded dwarf sorts are perhaps the most important class of garden beans and are probably more extensively used for snaps than the wax podded varieties, although the latter are considered by many as the more attractive in appearance. The green podded sorts are as a rule the more productive, being less sensitive to unfavorable conditions of soil and climate and of late years have been less susceptible to bean diseases.

Early Refugee An extremely early, green podded sort furnishing round, fleshy, light green pods which are slightly curved, of medium size, about five inches long and of fine quality. The plants are a little smaller, more upright, and the leaves a little larger than those of the late Refugee, and the seed much the same in shape and color. Our stock is uniform, the vines ripening pods well together and long before those of the Refugee or Thousand to One. Seed long, cylindrical, rounded at ends, drab, nearly covered with dark purple blotches. This is an excellent snap bean for early markets and stands shipment well. **Pkt. 10c; Lb. 45c; 2 Lbs. 80c postpaid; 100 Lbs. \$28.00**

Bountiful This excellent dwarf, green podded sort is similar in appearance to Early Yellow Kidney Six Weeks but is of much better quality. The vines are vigorous and inches, straight, broad, flat, light green, of handsome appearance and absolutely stringless for snaps. They are tender and brittle, much longer than most sorts. The pods are longer, broader and have much longer tips than those of Long Yellow Six Weeks. Seed medium sized, kidney shaped, light yellow with brownish circle about eye. Bountiful is a most desirable early sort for snaps for the home garden. **Pkt. 10c; Lb. 50c; 2 Lbs. 90c postpaid; 100 Lbs. \$30.00**

Full Measure A green podded variety which has proven very satisfactory in some sections both for the market and home garden. The pods somewhat resemble those of Stringless Green Pod but are a trifle longer and more slender. Pods round, about five inches long, firm but tender, entirely stringless, and of excellent quality. Seed medium size, brown mottled with light yellowish drab. **Pkt. 10c; Lb. 55c; 2 Lbs. \$1.00 postpaid; 100 Lbs. \$35.00**

Red Valentine For snaps there is nothing superior to this variety among the dwarf green podded sorts both for the home and market garden and many prefer it to the wax varieties. The plants are of medium size, erect with dark green leaves. The pods are of medium length, about four and one-half inches, medium green color, curved, cylindrical, with crease in back, very fleshy, crisp and tender. Where the young plants have to contend with adverse conditions, no other dwarf bean is more certain than the Valentines are to set pods. Seed long, of medium size and unsymmetrical in shape, purplish pink splashed with pale buff. We know of no stock of Red Valentine which can be compared with that we offer in uniformly high quality of pod. Our strain combines in high degree all the good qualities of the sort. **Pkt. 10c; Lb. 50c; 2 Lbs. 90c postpaid; 100 Lbs. \$30.00**

Black Valentine A very hardy and productive green podded sort with strong, vigorous vines. The pods are nearly round or slightly flattened, medium size, of dark green color and about six inches long. The pods hold their attractive appearance on the market better than any other sort; the toughness of the fibre which makes this possible however, also causes the pods to be of the poorest quality for table use. Not recommended for a home garden variety. Seed small to medium sized, black, oblong, slightly flattened. **Pkt. 10c; Lb. 45c; 2 Lbs. 80c postpaid; 100 Lbs. \$28.00**

Tennessee Green Pod This early intermediate snap bean is very popular in some sections of the south and where known in other parts of the country is considered of exceptional merit. It is the longest podded dwarf sort. The plants are large, somewhat spreading and prolific. The foliage is dark green, with leaves large and crumpled. The pods are very long, often six to seven inches, flat, irregular in shape, bright but rather dark green and of exceptionally fine flavor. The green shell pods are much depressed between seeds. Seed of medium size, oval, flat, yellowish brown in color. **Pkt. 10c; Lb. 50c; 2 Lbs. 90c postpaid; 100 Lbs. \$30.00**

Stringless Green Pod A very desirable dwarf green podded snap sort for the home garden and largely grown for the market. The plants are large, spreading and productive. The pods are medium green, five to six inches long, cylindrical, larger than those of Red Valentine but are quite as fleshy, of equally high quality and remain crisp and tender longer. They mature a little later. Seed of medium size and length, yellowish brown. **Pkt. 10c; Lb. 55c; 2 Lbs. \$1.00 postpaid; 100 Lbs. \$35.00**

Giant Stringless Green Pod An exceedingly productive and very handsome sort. The plants are large, vigorous and spreading. The pods are large and nearly round, and of medium green color. They mature a few days later than those of Stringless Green Pod, average about one-fourth inch longer and more nearly straight. The quality is very good for snaps for home use. The variety is suitable also for the market. Seed long, slender, yellow. **Pkt. 10c; Lb. 55c; 2 Lbs. \$1.00 postpaid; 100 Lbs. \$35.00**

Giant Stringless Green Pod

Not less than 10 pounds at the 100 pound rate. One hundred pound prices do not include transportation; if ordered shipped prepaid add 8c per pound to the 100-pound price. We do not put up half pounds of beans.

BEANS—DWARF OR BUSH

GREEN PODDED SORTS—Continued

Dwarf Horticultural One of the best dwarf sorts for green shell beans for the home garden and market and can be used early as a green podded snap bean. The plants are very productive, compact and upright, with large leaves. The mature pods are about five to five and one-half inches in length, broad and thick, curved, with splashes of bright red on a yellowish ground. They become fit for use as green shelled beans early and in this condition the beans are very large, easily shelled and are about equal to the Lima in quality. Seed large, oval, plump, pale buff splashed with deep red. **Pkt. 10c; Lb. 50c; 2 Lbs. 90c postpaid; 100 Lbs. \$30.00**

Refugee or Thousand to One A standard very productive sort, highly esteemed for late planting for snaps and very extensively used for shipping, canning and pickling. Sometimes called Late Refugee, Round Pod Refugee and Improved Refugee. The plants are very large, spreading, exceedingly hardy, with many small, smooth light green leaves. The mature pods are about five and one-fourth inches long, cylindrical, slightly curved, medium green when in condition for use as snaps but as they mature becoming light yellow, sometimes splashed with purple. Seed long, cylindrical, light drab, thickly dotted and splashed with purple. **Pkt. 10c; Lb. 50c; 2 Lbs. 90c postpaid; 100 Lbs. \$30.00**

Rogers' Stringless Refugee This variety is very similar in its general characteristics to Refugee or Thousand to One except that it is a trifle later maturing. The pods are absolutely stringless and in this respect are a decided improvement over the Refugee or Thousand to One. Pods are round, cylindrical, slightly curved and of medium green color when in condition for use as snaps. Seed long, cylindrical, drab splashed with purple. Recommended as an excellent variety for canners, also as a late maturing sort for the home or market garden. **Pkt. 10c; Lb. 60c; 2 Lbs. \$1.10 postpaid; 100 Lbs. \$38.00**

The following three Dwarf or Bush sorts are extensively planted as field beans.

Early Marrow Pea or White Navy This sort is a sure cropper and not only more prolific than the common white bean but is also of better quality. The plants are large and spreading, with small, thin leaves and occasional runners, ripening their crop comparatively early. The pods are light green, straight, short, about three and three-fourths inches, but usually containing six beans. The beans are small, oval, white, handsome and of superior quality for use as dry beans. **Pkt. 10c; Lb. 35c; 2 Lbs. 60c postpaid; 100 Lbs. \$18.00**

Large White Marrow or Mountain The plants of this very prolific sort are large, slender, spreading, with short runners and small leaves. The pods are broad, about five and one-half inches long, medium green, changing to yellow. A choice family sort both for green shells and dry beans. Seed large, ovoid, clear white, cooking very dry and mealy. **Pkt. 10c; Lb. 35c; 2 Lbs. 60c postpaid; 100 Lbs. \$20.00**

White Kidney The plants of this late variety, also called Royal Dwarf Kidney, are upright, very large, branching, with large, broad leaves. The pods are coarse, dark green and about six inches long. Seed large, white, kidney shaped, slightly flattened and of excellent quality, for family use either green shelled or dry. **Pkt. 10c; Lb. 40c; 2 Lbs. 70c postpaid; 100 Lbs. \$22.00**

DWARF LIMAS

The dwarf lima class cannot be recommended too highly. The beans can be grown and gathered much more easily than the pole limas as the vines require no support. They can also be grown closer together than those of any pole variety. Dwarf limas are fully equal in quality to pole limas and as a rule are earlier maturing.

Limas require a longer season for maturing than other garden beans. Do not plant till the ground is dry, weather warm and danger of frost is over. If possible select rich, light soil. Plant in drills two to three feet apart, dropping the beans three to four inches apart and covering one and one-half to two inches deep. If planted in hills, make the hills two to three feet apart one way and two to two and one-half feet the other and plant four to six beans in a hill. Hoe often but only when the leaves are dry.

Henderson's Bush Lima A dwarf form of the Small White Lima, valuable on that account, and because of its extreme earliness, hardness and productiveness. The plants are without runners but continue to grow and set pods until stopped by frost. The leaves are small and very dark green; flowers small, yellowish-white, borne in clusters and often above the foliage. The pods are medium dark green, short, about two and three-fourths inches, flat and contain two to four beans which are of excellent quality either green-shelled or dry. This is much used by canners, as well as for home and market garden use. Seed small, flat and white with slight tinge of yellow. **Pkt. 10c; Lb. 45c; 2 Lbs. 80c postpaid; 100 Lbs. \$28.00**

Burpee's Improved Bush Lima This is a little the earliest maturing of the large seeded limas. The plants are vigorous and productive. The pods are medium green, very large, about five inches long, thick and usually contain four beans, which are unusually thick, of largest size and of excellent quality. Seed very large, thick and usually shows a greenish white tinge which is generally considered an indication of superior quality. One of the best and most extensively used bush limas for the market as well as home garden. **Pkt. 10c; Lb. 50c; 2 Lbs. 90c postpaid; 100 Lbs. \$30.00**

Dwarf Large White Lima A bush form of the true Large White Lima and of equally good quality. The plants are uniformly dwarf but very productive. The pods are medium green, are as broad and very nearly as long as those of the pole variety of Large White Lima and are a little more curved. They contain from three to five very large, flat beans of very good quality for home garden or market. Seed very large, flat, white with slight greenish tinge. **Pkt. 10c; Lb. 45c; 2 Lbs. 80c postpaid; 100 Lbs. \$26.00**

Fordhook Bush Lima An improved dwarf lima of the Kumerle type. It is sometimes called Potato Bush Lima. The plants are vigorous and erect, bearing well above the ground. The pods, which are produced in large clusters, are medium green, about four and three-fourths inches long and each contains three to five large beans of exceptionally fine quality. It is much more productive than Kumerle and matures earlier. Seed large, irregularly oval in shape, very thick, white with greenish tinge. This sort is popular for home and market use, especially in the east. **Pkt. 10c; Lb. 55c; 2 Lbs. \$1.00 postpaid; 100 Lbs. \$37.00**

Not less than 10 pounds at the 100 pound rate. One hundred pound prices do not include transportation; if ordered shipped prepaid add 8c per pound to the 100 pound price. We do not put up half pounds of beans.

FORDHOOK BUSH LIMA

BEANS—POLE OR RUNNING

Although pole beans require considerable care and labor, they are when properly grown usually of longer bearing period than the dwarf sorts and are generally more productive.

Pole beans are even more sensitive to cold and wet, as well as to drought and hot winds, than the dwarf varieties, but are of superior quality and productiveness. After settled warm weather, set poles four to eight feet long in rows four feet apart and extending north and south, the poles being three feet apart in the row. Let the poles slant slightly toward the north. Set in this way the vines climb better, and the pods are straighter and more easily seen. Around each stake plant five to eight beans one and one-half to two inches deep. When well started thin to four plants, and see that they all climb around the pole in the same way, for they will not grow if tied up in the opposite direction.

Another plan is to plant in rows thickly enough so that there will be one plant to eight or ten inches. Set posts five feet high firmly at each end of the rows and drive stakes made of two by two lumber at intervals of about sixteen feet along the rows. Stretch a wire, size number 10 or 12, between the posts along each row, and fasten it to the tops of the stakes with wire staples. Run a lighter wire or twine along the bottom about six inches from the ground and fasten to the posts and stakes with wire staples. Between these two stretch a wire or twine wherever there is a plant. The vines will run up these until they reach the top wire, when they will care for themselves. Another way is to omit the bottom wire and stick small stakes two to six inches in the soil and fasten to top wire.

White Creaseback This green podded, white seeded creaseback variety is valuable for its extreme earliness and its habit of perfecting all of its pods within a short time. The vines are medium sized, vigorous and in good soil wonderfully productive, bearing round, fleshy pods in clusters of from four to twelve. The pods are of medium length, usually about five inches, comparatively straight and of attractive light green color. They are of the best quality as snaps for home use and stand shipping better than most sorts. Seed small, oval, white. The beans are too small to be of much value when shelled green, but are considered by many to be of very superior quality for baking. **Pkt. 10c; Lb. 40c; 2 Lbs. 70c postpaid; 100 Lbs. \$25.00**

McCaslan Pole A white seeded pole bean of recent introduction which has quickly gained wide popularity in the southern states. It is a vigorous and productive variety and a little earlier than Kentucky Wonder.

The pods are about 8 inches in length, slightly flattened, fleshy and of good quality.

This is not only a highly desirable variety for green-snap beans, but if allowed to ripen, produces a heavy crop of clear white beans which are of fine quality for winter use in cooking. **Pkt. 10c; Lb. 40c; 2 Lbs. 70c postpaid; 100 Lbs. \$25.00**

Kentucky Wonder Also known as Old Homestead. We believe this variety is the most practically useful of the green podded pole beans suitable for use as snaps. It is an early, very prolific sort, with showy pods which are of most excellent quality. The vines are vigorous, climbing well and very productive, bearing pods in large clusters. The pods are medium light green, very long, often reaching nine or ten inches, curved and twisted, nearly round and very crisp when young, becoming very irregular and spongy as the beans ripen. Seed long, oval, slightly flattened, dun colored. One of the very best early pole snap beans for the home garden or market. The quality of our stock is unsurpassed. **Pkt. 10c; Lb. 40c; 2 Lbs. 70c postpaid; 100 Lbs. \$25.00**

Nancy D. A new green podded variety that is unsurpassed in quality for use as green shelled beans. In season it matures with Kentucky Wonder and the vines are exceptionally vigorous and productive. The pods are nearly as long as those of Kentucky Wonder but are broader and flatter and somewhat lighter in color. When in condition for use as snaps the pods are nearly stringless and are of excellent quality. Seed medium size, flattened kidney shaped, buff or putty colored splashed with brown. **Pkt. 10c; Lb. 40c; 2 Lbs. 70c postpaid; 100 Lbs. \$25.00**

St. Louis Perfection White An early maturing, green podded, white seeded pole sort desirable for snaps and unsurpassed in its class as green shell beans. The vines are vigorous and very productive. The pods are round, very long, often eight to nine inches, irregular in shape and quite stringless. The beans when shelled green are large, very tender and white, a very desirable feature when comparison is made with the colored beans of other varieties of this class. Seed medium long, oval or well rounded, solid white. **Pkt. 10c; Lb. 40c; 2 Lbs. 70c postpaid; 100 Lbs. \$25.00**

CORN FIELD VARIETIES

Red Speckled Cut Short This extensively cultivated, green podded climbing sort, with red speckled, oval seed, is used largely in the south for planting among corn. It will give a good crop without the use of poles. The vines are medium sized, but vigorous, twining loosely with dark colored leaves. The snap pods are short, three to three and one-half inches, straight, flat to oval, fleshy and of good quality. The pods as they mature become light yellow tinged with red, the beans showing distinctly through the pod. Seed nearly oblong, cut off diagonally at the ends, light grayish white, covered about the eye and at one end with reddish or purplish brown, and irregularly dusted over most of the surface. **Pkt. 10c; Lb. 40c; 2 Lbs. 70c postpaid; 100 Lbs. \$24.00**

Scotia or Striped Creaseback A hardy and very productive green podded cornfield bean. The vines are sturdy and of good climbing habit, with small-medium deep, green leaves. The pods are long, about six inches, very cylindrical or completely rounded and distinctly crease-backed. The color when in condition for use as snaps is light silvery green, becoming tinged with purple as the pods mature. Seed small-medium, kidney shaped, mottled putty color with dark striping. This is especially suitable for growing on corn for snaps. **Pkt. 10c; Lb. 40c; 2 Lbs. 70c postpaid; 100 Lbs. \$25.00**

KENTUCKY WONDER

Not less than 10 pounds at the 100 pound rate. One hundred pound prices do not include transportation: if ordered shipped prepaid add 8c per pound to the 100 pound price. We do not put up half pounds of beans.

BEANS—POLE OR RUNNING—Continued

Kentucky Wonder Wax This vigorous wax podded pole bean is very similar to the green podded Kentucky Wonder but the pods are a little broader. They are very fleshy and stringless as snaps and are of excellent quality. The pods are very long, handsome light yellow, often eight to nine inches in length. Seed medium sized, oval, flattened, very irregular, usually somewhat shriveled, dark brown. Its earliness and hardness commend this as a pole bean well adapted even for northern latitudes. **Pkt. 10c; Lb. 45c; 2 Lbs. 80c postpaid; 100 Lbs. \$26.00**

Golden Cluster Wax A well known early and very attractive sort. It is one of the best wax-podded snap pole beans. The vines are large, strong growing, vigorous and hardy, with large, light green, crimped leaves. The pods are six to eight inches long, borne in abundant clusters, each containing from three to six pods varying in color from golden yellow to creamy white. The pods are very broad, thick and fleshy. They are of very good quality and stay in condition for use a long time. Seed medium sized, flattened, oval, dull white. **Pkt. 10c; Lb. 45c; 2 Lbs. 80c postpaid; 100 Lbs. \$26.00**

Improved London Horticultural This improved strain is earlier and has much longer and more attractive pods than other strains of pole Horticultural beans. The vines are vigorous and productive. The pods are six to seven inches long, striped or splashed with deep brilliant carmine. The green shelled beans are of large size and of the highest quality for table use. This is the earliest and most attractive of the Horticultural class. **Pkt. 10c; Lb. 45c; 2 Lbs. 80c postpaid; 100 Lbs. \$26.00**

London Horticultural or Speckled Cranberry One of the best of the Horticultural varieties as a general purpose late green shell bean for home or market. The vines are moderately vigorous with large, light colored leaves. The pods are medium length, four and one-half to five and one-half inches, pale green when young, becoming as they mature yellowish green striped or splashed with red. The beans are large, ovate, flesh colored, splashed and spotted with wine-red and of the highest quality, either green or dry. Many like this sort better than limas. This well known horticultural pole bean is sold also as Wren's Egg. **Pkt. 10c; Lb. 45c; 2 Lbs. 80c postpaid; 100 Lbs. \$25.00**

Lazy Wife One of the best of the later green podded pole beans for snaps or green shell use. The medium green pods, borne in large clusters, are five and one-half to six and one-half inches long, broad, thick, fleshy and entirely stringless. When young they have a rich, buttery flavor which is retained until they are nearly ripe. The dry beans are excellent for winter use. The seed is white, medium size, slightly oval or nearly round. **Pkt. 10c; Lb. 45c; 2 Lbs. 80c postpaid; 100 Lbs. \$26.00**

POLE LIMAS

Of all the pole beans, limas are considered to have the greatest economic value. The culture is the same as for other pole beans except that being more tender, the seed is usually planted one to two weeks later. In firm soils it will be found of advantage to place the beans on edge with the eye down as when planted in this manner they germinate and come up more readily.

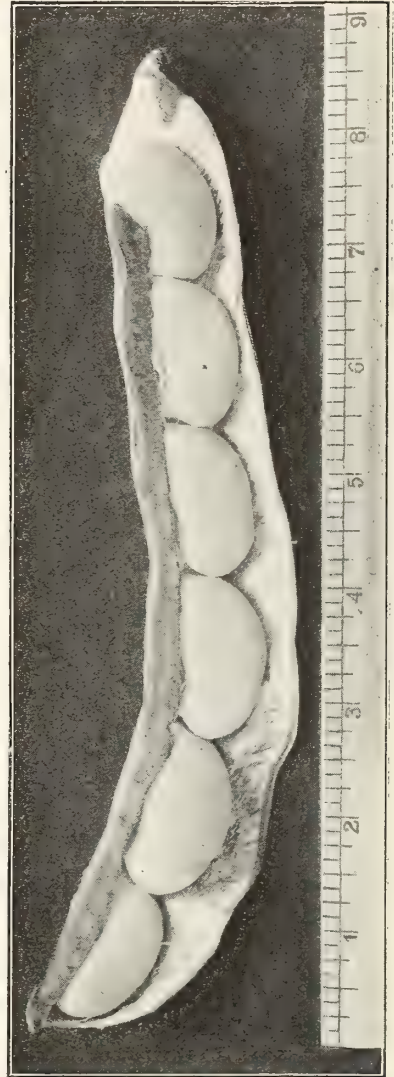

Seibert's Early Lima In earliness, ease of shelling, size, beauty and quality of the green beans, this variety leads all other early limas for either the home garden or market. The vines are vigorous and remarkably productive. The pods are medium green, large, flat, about five inches long, moderately curved. The green shell beans are very large, very tender and of finest quality. This standard early pole lima was introduced by us in 1895. Seed ovoid, flat with slight greenish tinge. **Pkt. 10c; Lb. 45c; 2 Lbs. 80c postpaid; 100 Lbs. \$26.00**

Small White Lima, Carolina or Sieva This very early and reliable small seeded pole lima is especially adapted for planting in the south. The vines are vigorous, with many short branches. The leaves are small, smooth, stiff, glossy dark green. The pods are dark green, short, about three inches, curved, flat. Seed small, flat, white with slight tinge of yellow. This is sometimes called Sewee. It is the most generally known "butter bean" of the south. **Pkt. 10c; Lb. 45c; 2 Lbs. 80c postpaid; 100 Lbs. \$26.00**

King of the Garden Lima The vines of this standard pole lima are very vigorous and productive. The pods are medium dark green, very large, five to six inches long, broad, flat, filled with four or five very large white beans of finest quality. On account of its large pods it is a favorite with market gardeners. It will come into bearing earlier and make larger pods if not more than two vines are left to grow on a pole. Seed very large, ovoid, flat, white, with slight greenish tinge. **Pkt. 10c; Lb. 45c; 2 Lbs. 80c postpaid; 100 Lbs. \$26.00**

Detroit Mammoth Lima This new variety which we offered in 1917 for the first time is the largest podded of any lima yet introduced. The mammoth pods are nine to eleven inches long, rather broad, medium dark green in color and contain five to seven beans of the most excellent quality. It comes into bearing medium early and the vines, which are vigorous and strong growing, are exceptionally productive. Seed large, ovoid, rather flat, white slightly tinged with green. **Pkt. 10c; Lb. 45c; 2 Lbs. 80c postpaid; 100 Lbs. \$28.00**

Large White Lima This well known large pole lima variety is too late for the extreme north and is being supplanted in some sections by Seibert's Early Lima. The vines are tall and vigorous but slender, with medium sized, smooth, medium green leaves. The pods are borne in clusters and are five and one-half inches long, broad, very thin and are of medium green color. Seed very large, ovoid, flat, white with slight tinge of green. **Pkt. 10c; Lb. 45c; 2 Lbs. 80c postpaid; 100 Lbs. \$26.00**

DETROIT MAMMOTH LIMA

Not less than 10 pounds at the 100 pound rate. One hundred pound prices do not include transportation; if ordered shipped prepaid add 8c per pound to the 100 pound price. We do not put up half pounds of beans.

BEET

The best results are obtained on a deep, rich, sandy loam. If wanted very early, sow such sorts as Crosby's Egyptian and Detroit Dark Red in hotbeds and transplant, cutting off the outer leaves. For general crop sow in freshly prepared soil as soon as the ground will permit, in rows eighteen inches apart, covering about an inch deep and pressing the soil firmly over the seed. When the plants are well established thin four to six inches apart in the row.

For winter use the turnip varieties may be sown in June or July so as to mature late in the season. The roots are stored in a cellar and covered with sand to prevent wilting, or they may be kept outdoors in pits such as are used for apples and potatoes.

Extra Early Egyptian Blood Turnip This is the best variety for forcing. It is also excellent for first early crop outdoors, being very early, with small tops. The leaves are dark green, shaded and veined with dark red. The roots are very dark red, moderately thick, a little rounded on top, distinctly flat on the bottom, and about two inches in diameter when mature. The flesh is dark purplish red, zoned lighter shade; firm, crisp and tender. A popular market garden sort, but not as desirable for the home garden as some of the later maturing varieties. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 30c; Lb. \$1.00**

Crosby's Egyptian This very desirable table beet does not closely resemble the original Egyptian except in its extreme earliness. The tops are small. The roots are flattened, globe shaped and very smooth. The exterior color of the root is bright red. The flesh of our strain is bright vermilion-red, zoned with a lighter shade, very sweet, tender and of excellent quality. This is one of the best for early planting outdoors and is much used for bunching. It becomes fit for use earlier than any other variety but it is not so well suited as Extra Early Egyptian Blood Turnip for forcing in hot beds or for transplanting. Our stock is exceptionally uniform in shape and color, and is earlier than the older strains which are similar in shape but show the purplish red color. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25**

CROSBY'S EGYPTIAN

Early Wonder A very early dark red beet similar to Crosby's Egyptian in shape. Its earliness and deep color make it a favorite with the market gardeners in many sections of the country. It is sweet and tender and a good variety for the home garden. The tap roots are small and the roots are of a desirable shape for bunching. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25**

Detroit Dark Red We believe this is the best beet for the market and home garden, and on account of its uniformly deep rich color the most desirable for canning. The tops are small and upright in growth. The leaves are dark green, shaded with red. The roots are medium sized, globular or nearly round, very smooth and of dark blood red color. The flesh is deep vermilion red, zoned with a lighter shade of the same color. The variety is very desirable for bunching. (See further description and illustration on page 4.) **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.50**

Early Eclipse An early beet especially desirable for the home garden and used for bunching. The tops are small. The roots are bright deep red, smooth, round or slightly top shaped with a small tap and small collar. The flesh is bright red, zoned with pinkish white, very sweet, crisp and tender, especially when young. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 30c; Lb. \$1.00**

Edmand's Early Blood Turnip A desirable second early market beet, suitable also for the home garden. Tops short, rather spreading; ribs and leaf stalks dark red; blade of leaf bright green, often with wavy edge. Roots nearly round or slightly flattened; exterior color dark red, interior color purplish red with little zoning; crisp, tender, sweet and an excellent keeper. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 30c; Lb. \$1.00**

Early Blood Turnip (Improved) An extra selected stock of Blood Turnip having larger, coarser tops and root than Detroit Dark Red and requiring a longer time to mature. The roots are dark red and nearly round or slightly flattened. The flesh is deep red, zoned with lighter shade, sweet, crisp and tender. This is an excellent market and home garden sort for summer and autumn use. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 30c; Lb. \$1.00**

Ferry's Half Long Blood A half long, deep red beet by far the best variety for winter and spring use. It is excellent to slice for pickles. The tops are very upright with exceptionally smooth leaves. The roots are deep red, half long, smooth and uniform in shape. The flesh is very deep, rich red, sweet and tender. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25**

Long Dark Blood A standard long late variety of very good quality which keeps well through the winter. The roots are smooth, rather slender, growing largely underground, with few or no side roots and when mature about eight or ten inches in length, sometimes longer, when grown in deep, well-dug and well-manured soil. The exterior color of the roots is very dark purple, almost black. Flesh is dark red, tender and sweet. It is an excellent sort for pickles. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 30c; Lb. \$1.00**

SWISS CHARD (Sea Kale Beet) This kind of beet is grown exclusively for use as greens. It produces numerous fleshy, tender leaves and leaf stems which are superior to those of other beets. If only the outer leaves are picked, leaving the center of plant untouched, a short row in the garden will furnish an abundance of greens for the average family throughout the season. The leaf stems may be served separately like asparagus. Swiss Chard is well worthy of a place in the home garden as well as for market use. It is sometimes called Leaf Beet, Spinach Beet and Silver Beet.

Silver Leaf Has large, broad, undulated leaves of attractive yellowish green color and very large, broad white stalks and midribs. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 30c; Lb. \$1.00**

Lucullus The leaves of this variety are crumpled and savoyed, and not quite as rounding as Silver Leaf. The color is a deeper green or more nearly the color of spinach. The plant is a little more erect in habit and the leaf stems are thicker though not as broad as Silver Leaf. Favored by many on account of its darker green color. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 30c; Lb. \$1.00**

BEET—Continued

MANGEL WURZEL

The Mangel Wurzel, also called Mangel, Cattle Beet and Field Beet, may be grown in almost any soil, but deep loams are necessary for heavy yields of the long varieties. When well grown the roots give an immense yield of very valuable food for stock. Plant early in spring in drills two to two and one-half feet apart, and about one inch apart in the row, covering with about one and one-half inches of fine soil firmly pressed down. Cultivate frequently. When about three inches high begin thinning and continue at intervals until the roots stand about ten inches apart.

Giant Feeding Sugar Beet or Half Sugar Mangel Desirable for stock feeding, affording not only a very large crop much easier to harvest than other sorts but also having higher nutritive value, being especially rich in sugar. The roots are light bronze green above ground, grayish white below, with white flesh. On account of growing partly out of the ground and the long ovoid shape the crop can be harvested and stored easily and at less expense than any other root crop. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 25c; Lb. 75c.**

Mammoth Long Red The roots are very large, uniformly straight and well formed and comparatively thicker than the common sort. The flesh is white tinged with rose. This strain under careful culture is enormously productive. Our stock will produce the largest and finest roots which can be grown for feeding stock and is vastly superior to many strains offered under other names, such as Norbitan Giant, Colossal, Monarch, etc. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 25c; Lb. 75c.**

Yellow Leviathan The roots of this exceedingly productive sort grow about one-half out of the ground and are very easily harvested. In shape they are long fusiform, or spindle shaped tapering from the middle to each end, and have a small collar. The color is light gray tinged with brown above ground, yellow below. The flesh is white, sometimes slightly tinged with yellow. The tops are green and comparatively small. The roots have less tendency to become woody than most sorts. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 25c; Lb. 75c.**

Golden Tankard The tops are comparatively small, with the leaf stalks and veins distinctly tinged with yellow. The neck is small. The roots are large, ovoid, but with bottom usually of larger diameter than top, light gray above ground, deep orange below. The flesh is yellow, zoned with white. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 30c; Lb. 90c.**

SUGAR BEET

The Sugar Beets are desirable not only for sugar making but are valuable for stock feeding and when small may be used for the table. The best soil is a rich, friable sandy, or clayey loam. Rich, mucky soils will often give an immense yield of roots which, though excellent for feed, are of little value for sugar making.

Plant early in spring in drills two to two and one-half feet apart, and about one inch apart in the row, covering with about one and one-half inches of fine soil firmly pressed down. Cultivate frequently. When about three inches high begin thinning and continue at intervals until the roots stand about ten inches apart.

FOR SUGAR MAKING

Klein Wanzleben The roots are a little larger than Vilmorin's Improved and a little harder and easier grown. The tops are rather large and the leaves slightly waved. This sort often yields under careful culture from twelve to eighteen tons per acre. It is probably the best sort for the experimenter to use. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 25c; Lb. 60c.**

BROCCOLI The heads resemble somewhat a coarse cauliflower and the culture is the same in all essentials as for that vegetable. Broccoli is well adapted only to those sections where the season is long, cool and rather moist. One of the most valuable features is that it withstands greater extremes of temperature than cauliflower.

Early Large White French This is considered the best of the white heading sorts for most sections. The plants are very hardy, vigorous and easily grown. The heads are white, compact, hard and of good quality. **Pkt. 10c; Oz. 80c; 2 Oz. \$1.30; ¼ Lb. \$2.25; Lb. \$7.50**

Italian Green Sprouting An all seasons variety that comes into use about ninety days after planting. If started in hot bed April first, will be ready for use the first week in July. It is much less susceptible to weather changes than cauliflower and will produce heads in hot weather which would cause failure in cauliflower. By successive plantings a supply can be had from July first until hard freezing weather. Culture the same as for cabbage. (See illustration and further description on page 6.) **Pkt. 10c; Oz \$1.00; 2 Oz. \$1.75; ¼ Lb. \$3.25.**

BRUSSELS SPROUTS Used in the fall and early winter and by some considered more tender and delicious than any cabbage. Plant resembles the cabbage, the edible part being the numerous very small heads or sprouts an inch or two in diameter formed on the stalk at each leaf joint. The culture is the same in all essentials as for cabbage, except the leaves should be broken down in the fall to give the little heads more room to grow.

Long Island Improved We have found this strain very desirable in that it will produce sprouts under less favorable conditions than any variety we have ever tried. The plants are of dwarf habit but furnish a large yield of sprouts of excellent quality. **Pkt. 10c; Oz. 35c; 2 Oz. 60c; ¼ Lb. \$1.00; Lb. \$3.50**

BRUSSELS SPROUTS, LONG ISLAND IMPROVED

CABBAGE

For many years cabbage seed has been a leading specialty with us. Our cabbage seeds are all grown from approved stock seeds which are largely of our own development on our Oakview Stock Seed Farm; they are all grown under our personal inspection and supervision. We believe there is no seed that is more reliable, nor any that can be more implicitly depended upon to give planters uniformly satisfactory results.

The requisites for complete success with cabbage are: First, good seed. In this crop the quality of the seed used is of the greatest importance. No satisfactory results can possibly be obtained when poor seed is planted. Second, rich, well prepared ground. A heavy, moist and rich loam is most suitable. Third, frequent and thorough cultivation. The ground should be highly manured and worked deep. Cabbage is grown all over the country and specific directions regarding the time and methods of planting applicable to all localities cannot be given. In general, north of the 40th parallel the early sorts should be sown very early in hotheds, hardened off by gradually exposing them to the night air and transplanted as early as the ground is in good condition, setting eighteen to thirty-six inches apart, according to size of variety. South of the 40th parallel sow about the middle of September, or later according to latitude, transplanting into cold-frames if necessary to keep through winter and setting in open ground as early as possible in the spring.

The late autumn and winter varieties may be sown from the middle to the last of spring and transplanted when four to six inches high. If the weather and soil are dry the late sowings should be shaded and watered in order to hasten germination, but it is important that the plants should not be shaded or crowded in the seed-bed, or they will run up weak and slender and will not endure transplanting well. Cabbages should be hoed every week and the ground stirred as they advance in growth, drawing up a little earth to the plants each time until they begin to head, when they should be thoroughly cultivated and left to mature. Loosening the roots will sometimes retard the bursting of full grown heads.

Of late years many crops of early cabbages have been destroyed by maggots at the roots. An effective remedy seems to be to remove the earth carefully from around the stem so as to form a funnel-shaped cup and apply Zenoleum, Sanax Dip, or some similar preparation, diluted at the rate of one part to eighty parts of water. Apply one pint to a plant. A well known remedy is to apply an emulsion of kerosene which may be made as follows: Add one quart of kerosene oil to two quarts of boiling fish oil soap (whale oil soap), soft soap or any cheap soap which has been thinned to the consistency of cream. Stir the oil thoroughly by churning or other method until it has united with the soap and forms a cream-like substance. Then dilute with five times as much water and apply once a week. A preventive for maggots is to spray on forcibly a carbolic acid emulsion diluted with thirty parts of water, applied the day after the cabbage plants are transplanted, and repeated several times at intervals of a week.

The cabbage worms which destroy the leaves and heads later may be killed by dusting with pyrethrum powder, Slug Shot or Paris green. The last two are poisonous and should not be used in large quantities, or late in the season; however should their use be necessary, care should be taken to remove the outside leaves before the heads are used. If the disease called club-root should get a foothold, do not plant the land with any of the cabbage family for a year or two. This is usually an effective remedy.

FIRST EARLY SORTS

Early Jersey Wakefield This most excellent variety is the earliest and surest heading of first early cabbages for the market and home garden. Most gardeners depend upon it for the bulk of their extra early crop. The plants are exceedingly hardy, not only in resisting cold but other unfavorable conditions. They are compact and erect or very slightly spreading, with few outer leaves, which are smooth, thick, nearly oval and deep green. The stem is short. The heads are of medium size, very solid, uniformly pointed and of excellent quality. **Pkt. 10c; Oz. 35c; 2 Oz. 60c; ¼ Lb. \$1.00; Lb. \$3.50**

Golden Acre This strain of Copenhagen Market has been selected to produce an earlier and somewhat smaller head and more compact plant than the parent type. Where extreme earliness is the prime consideration this characteristic will commend it particularly to the market grower and shipper. The heads are round, solid and of excellent quality. The plants are compact with few outer leaves. The leaves are thick and smooth and of medium light green color.

Our strain of this variety is of superior quality in earliness and uniformity of size, shape, and time of maturity. **Pkt. 10c; Oz. 85c; 2 Oz. \$1.35; ¼ Lb. \$2.25; Lb. \$8.00**

Copenhagen Market The earliest large round-headed cabbage yet introduced. The heads are exceptionally large for so early a variety, very solid and of most excellent quality. The plants are vigorous but compact, with short stem and few outer leaves which are of rather upright growth. The leaves are medium light green, nearly round, comparatively thick and smooth. This is a most excellent sort, both for the home garden and market gardening trade. Our strain produces the characteristic large, round heads that for solidity and excellent quality make this variety so valuable. **Pkt. 10c; Oz. 75c; 2 Oz. \$1.25; ¼ Lb. \$2.00; Lb. \$7.00**

Charleston or Large Wakefield A strain in which the plant is larger and a little later than Early Jersey Wakefield, the head being fully as solid but less pointed and considerably larger. The leaves are rather large, smooth and comparatively thick. Its exceeding hardiness, earliness and size of head have made it with market gardeners and shippers a popular sort to follow Jersey Wakefield. The plants are medium sized, very vigorous and slightly spreading. The heads are blunt pointed but very broad at the base. Our stock can be depended upon to produce uniformly fine, marketable heads. **Pkt. 10c; Oz. 30c; 2 Oz. 55c; ¼ Lb. 90c; Lb. \$3.00**

COPENHAGEN MARKET

CABBAGE—SECOND EARLY AND INTERMEDIATE SORTS

ISOLATION CAGES IN ONE OF OUR GREENHOUSES AT OAKVIEW, FOR THE PROTECTION AND HAND POLLINATION OF SELECTED CABBAGE PLANTS

hard sharply pointed head and a very sure cropper. Owing to its compact and upright habit of growth and peculiar texture of its rather short and thick, dark green leaves, the variety resists cold, wet and insect pests exceptionally well. The heads are of medium size, very closely and convolutely wrapped, sharply conical, of good quality and keep very well. The leaves are dark bluish green with much bloom. The variety is very extensively used for the home garden. It is sometimes planted late and then makes a desirable winter cabbage. **Pkt. 10c; Oz. 30c; 2 Oz. 50c; ¼ Lb. 90c; Lb. \$2.75**

Succession A sure heading sort, intermediate or second early in season and adapted for autumn as well as late summer use. The plants are vigorous and strong growing, with a short stem and have numerous, rather short, outer leaves which are somewhat frilled. The heads are large, deep, very firm and of excellent quality. The seed we offer is from carefully grown selected stock. **Pkt. 10c; Oz. 30c; 2 Oz. 55c; ¼ Lb. 90c; Lb. \$3.00**

All Seasons A very desirable large cabbage of intermediate season, adapted for autumn as well as late summer use, and considered one of the most desirable for kraut. The plants are very vigorous and sure heading, with few outer leaves which are large and fairly smooth or slightly waved. The heads are nearly round or somewhat flattened, very solid and of excellent quality. It is remarkable for its ability to stand the hot sun and dry weather, remaining an exceptionally long time in condition for use. Sometimes sold as Vandergaw. **Pkt. 10c; Oz. 30c; 2 Oz. 55c; ¼ Lb. 90c; Lb. \$3.00**

Wisconsin All Seasons A new strain developed at the Wisconsin Experiment Station. It has proven very successful in resisting cabbage yellows in districts where large plantings are made for kraut. It is a shade darker in color than other strains of All Seasons but is the same in shape and size of head, type of leaf and habit of plant. It matures a little slower than other All Seasons. The seed we offer is from proven stock and is of the true disease resistant strain. **Pkt. 10c; Oz. 50c; 2 Oz. 85c; ¼ Lb. \$1.40; Lb. \$5.00**

Volga A main crop sort, very desirable where large, uniformly round heads with short stem and plants of compact growth are wanted. This sort matures very early for a variety furnishing such large heads of excellent shape. The outer leaves are thick, long oval and rather smooth. The variety is hardy, usually very solid and a good keeper. **Pkt. 10c; Oz. 25c; 2 Oz. 40c; ¼ Lb. 75c; Lb. \$2.50**

Surehead One of the most reliable main crop or late cabbages for northern latitudes, being very hardy and exceptionally sure heading. In some sections this is used largely as a late home market cabbage and for shipping. The plants are rather upright, with many outer leaves which are waved, thin edged, crimped and distinctly frilled; stem rather short. The heads are large and broad, thick, somewhat flattened, compact, very solid and of excellent quality. **Pkt. 10c; Oz. 25c; 2 Oz. 40c; ¼ Lb. 75c; Lb. \$2.50**

Early Dwarf Flat Dutch The plants of this valuable second early sort are short stemmed, compact and upright with comparatively few and short leaves. The outer leaves are slightly waved and serrate at the edges. The heads are large for size of plant, are nearly round or somewhat flattened, close, firm and very solid. They mature a little earlier than Early Summer. This variety is extensively used for the home garden and market. The seed we offer is of first quality. **Pkt. 10c; Oz. 30c; 2 Oz. 50c; ¼ Lb. 90c; Lb. \$2.75**

Glory of Enkhuizen This second early variety is very sure heading and of excellent quality. The plants are of vigorous growth, with large, rather spreading outer leaves which are noticeably curved and frilled. The heads are globular or very nearly round, very solid and of large size for so early a variety. **Pkt. 10c; Oz. 40c; 2 Oz. 75c; ¼ Lb. \$1.10; Lb. \$4.00**

Allhead Early This excellent second early market sort produces heads that are very large for so early a cabbage and of very good quality. It is desirable not only for general spring planting but by planting late it can be used as a fall and early winter cabbage. The variety is well adapted for kraut. The plants are compact, with few outer leaves which are comparatively smooth and rather thick, being nearly entire at edges and only slightly waved. The stem is short. The heads are solid and flat but very deep. Our strain is of special value. **Pkt. 10c; Oz. 35c; 2 Oz. 60c; ¼ Lb. \$1.00; Lb. \$3.50**

Midseason Market This variety which we previously listed as Dwarf White Summer is a second early variety of distinctive merit. Heads medium to large, round or nearly so, very solid and heavy. Interior color of head remarkably white and of fine flavor and texture. Plants vigorous growing but very uniform in type and are quite short stemmed. Leaves light green in color, comparatively short and broad. An excellent sort for the home garden as it is a sure header and stays in condition for use a long time. Also recommended as a valuable addition to the list of kraut varieties. **Pkt. 10c; Oz. 30c; 2 Oz. 55c; ¼ Lb. 90c; Lb. \$3.00**

Early Winnigstadt One of the best of the second early or medium early sorts, very hardy, with a very upright habit of growth and peculiar texture of its rather short and thick, dark green leaves, the variety resists cold, wet and insect pests exceptionally well. The heads are of medium size, very closely and convolutely wrapped, sharply conical, of good quality and keep very well. The leaves are dark bluish green with much bloom. The variety is very extensively used for the home garden. It is sometimes planted late and then makes a desirable winter cabbage. **Pkt. 10c; Oz. 30c; 2 Oz. 50c; ¼ Lb. 90c; Lb. \$2.75**

CABBAGE—LATE OR AUTUMN AND WINTER SORTS

Ferry's Premium Late Flat Dutch This strain is the result of much care on our part to develop and maintain the good qualities which have made this sort so popular. The plants are very hardy, comparatively slow growing but very sure heading; stem rather short. The plants are exceptionally vigorous, with very large, broad, spreading outer leaves which are moderately smooth or very slightly waved and slightly blistered. The heads are uniformly large, often very large, flat but deep, distinctly flattened on the top, solid and of excellent quality. This is considered by many as the standard, very large late cabbage for home garden and market. It is an excellent keeper. Pkt. 10c; Oz. 25c; 2 Oz. 40c; ¼ Lb. 75c; Lb. \$2.50

Wisconsin No. 8 A "yellows" resistant strain of cabbage developed out of our stock of Hollander under the direction of Dr. L. R. Jones of the University of Wisconsin. At Racine, Wisconsin, where for several years many of the commercial crops of cabbage were badly infected or entirely destroyed by the disease called the yellows this strain has proven to be practically immune from attack. The disease resistant properties of this variety, however, apply only to that known as the "yellows" and no claim is made that it is less susceptible to other forms of disease such as Black Rot, Black Leg or Club Root than other sorts. Although showing considerable variation in type the plants resemble Hollander but are larger and more leafy and spreading. The heads are round or somewhat flattened and retain to a remarkable degree the solidity and excellent keeping qualities of the Hollander. For localities where Cabbage plants are affected by the yellows we earnestly recommend a planting of this new strain. Pkt. 10c; Oz. 50c; 2 Oz. 85c; ¼ Lb. \$1.40; Lb. \$5.00

Ferry's Hollander Very hardy, sure heading, very solid, of good quality and as one of the very best keepers this is particularly desirable for distant markets or for late spring use. The plants are vigorous and compact, with short stems. They are exceedingly hardy in resisting cold and stand dry weather well. The leaves are distinctly upright in growth, few but rather large, long and narrow, thick, smooth, bluish green covered with whitish bloom. The heads are medium sized, round, exceptionally solid and stand shipment better than any other late sort. We offer seed of our own growing which, judging from our trials, will produce more uniformly typical heads than can be grown from stock obtainable elsewhere. Pkt. 10c; Oz. \$1.00; 2 Oz. \$1.75; ¼ Lb. \$3.25; Lb. \$12.00

Danish Ball Head In general appearance and character this strain is similar to Ferry's Hollander. It produces round or slightly flattened, solid heads of fine keeping quality. The plants are short stemmed, compact, fairly erect and have few outer leaves. Although not as uniformly even or quite as hard heading as Ferry's Hollander, this stock will usually give excellent satisfaction to market growers or home gardeners where long keeping quality is not the prime consideration. Pkt. 10c; Oz. 50c; 2 Oz. 85c; ¼ Lb. \$1.40; Lb. \$5.00

Mammoth Rock Red The largest and surest heading red cabbage. The plants are large and vigorous with medium length stem and spreading outer leaves which are dark green with red veining. The heads are late maturing, large, round, very solid and of very attractive deep red color. The variety is much used for cole slaw and pickling. Pkt. 10c; Oz. 35c; 2 Oz. 60c; ¼ Lb. \$1.00; Lb. \$3.50

Improved American Savoy The best of the main crop and late Savoys for home use or market. The plants are vigorous, of medium size, with rather short stem, and are very sure heading. The outer leaves are medium large, thick, fleshy and densely and uniformly crumpled. The heads are large, nearly round, fairly solid, sweet and tender. The quality is superior to sorts that have been offered as Perfection, Green Globe or Drumhead Savoy. Pkt. 10c; Oz. 30c; 2 Oz. 55c; ¼ Lb. 90c; Lb. \$3.00

FERRY'S HOLLANDER

DANISH BALL HEAD

CHINESE CABBAGE

Pe-Tsai This is not a true cabbage. Although related to the American varieties of cabbage being a Brassica, it is a different species botanically and is classified as Brassica pekinensis. It is often called Celery Cabbage on the market. The leaves when young are crimped, of light green color and appear like smooth leaved mustard but with much broader and heavier midribs. The plant as it matures becomes more upright and forms heads much like Cos Lettuce. The inner leaves blanch an attractive light yellow or creamy white with very white midribs. It is of distinctive flavor, very mild and pleasant. It is served as a salad like lettuce or cooked like asparagus. Sow in this latitude after July 1st at the same time as turnips. Early plantings of Pe-Tsai run quickly to seed in hot weather. Sow in drills fourteen to twenty inches apart and thin two or three times; or if grown for the market start in boxes and transplant like late cabbage. Pkt. 10c; Oz. 25c; 2 Oz. 40c; ¼ Lb. 75c; Lb. \$2.50

CARROT

CARENTAN

and tender. Although a medium early sort the roots are suitable for use nearly as early as any. The variety is extensively used for bunching. Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.50

Guerande or Ox Heart Especially desirable for soil so hard and stiff that longer rooted sorts would not thrive in it. The tops are comparatively small. The mature roots are four and one-half to five inches long, very thick, ending abruptly in a small tap root. The flesh is bright orange, fine grained and sweet. When young the roots are desirable for table use as a medium early carrot and when mature they are equally good for stock feeding. Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.50

Danvers A half long orange carrot, grown largely on account of its great productiveness and adaptability to all classes of soil. It is a desirable second early carrot for the home garden and is also suitable for field culture. The tops are of medium size. The mature roots are of medium length, six to eight inches long, tapering uniformly to a blunt point. The flesh is deep orange, tender and of good quality. Although the roots of this variety at maturity are comparatively short they often produce as large a bulk as the longer fields sorts and are more easily harvested. Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.50

Improved Long Orange The roots of the improved strain of this variety we offer are very deep orange, long and comparatively thick, often twelve inches in length and three inches in diameter at the crown, tapering regularly to a point. The tops are rather large. This intermediate to late maturing sort is suitable for table use as well as stock feeding, combining great productiveness with uniform shape where grown in light, deep, rich soil. When of size suitable for the table, the roots are tender and of good quality. Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.50

While a sandy loam made rich by manuring the previous year is the best soil for the carrot, any good land if thoroughly and deeply worked will produce satisfactory crops. It is advisable to sow as early in the spring as the ground is fit to work, though good crops may be grown from sowings as late as June 15. For table use sow the smaller kinds early in rows sixteen to eighteen inches apart. For field culture sow in drills eighteen to twenty-four inches apart, using from one and one-half to three pounds of seed to the acre. Cover one-half to one inch deep and see to it that the soil is pressed firmly above the seed. As soon as the plants appear, use the cultivator or wheel hoe. Thin two to six inches apart in the row, according to the size of the variety.

French Forcing (*Earliest Short Horn*) One of the earliest varieties in cultivation and very desirable for forcing. The tops are very small. The roots are reddish orange and are nearly round when forced quickly in very rich, well prepared soil, but are somewhat longer when grown out doors. When fully matured the roots are about two to two and one-half inches long, but they should be used before fully grown while young and tender. Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 55c; Lb. \$1.75

Early Scarlet Horn This variety is excellent for early planting out of doors. The roots are orange-red, about three inches long, top shaped but tapering abruptly to a small tap. Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 55c; Lb. \$1.75

Carentan (*Early Half Long Scarlet*) The tops of this early half long frame sort are very small and seed may be sown very thickly as the variety is well adapted for forcing. The roots are of medium size, slender, cylindrical with remarkably small neck, handsome deep orange color, coreless, tender throughout and of the best quality. They are usually four and one-half to five inches in length, but sometimes grow considerably longer. Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 55c; Lb. \$1.75

Nantes (*Half Long Scarlet, Stump Rooted*) This extensively used, half long early variety has small tops and is excellent for the market or home garden. The roots are cylindrical, smooth and of a bright orange color. The flesh is orange, becoming yellow in the centre but very tender throughout. This variety is of the finest quality and is one of the most symmetrical and handsome of the medium sized sorts. The mature roots are usually five to six inches long. Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 55c; Lb. \$1.75

Chantenay A most excellent, medium early, half long variety. It is one of the best in quality for the market and home garden, while its great productiveness and the ease with which it can be harvested make it desirable as a field sort. The tops are medium sized with small neck. The mature roots are thick, five and one-half to six inches in length, uniformly half long or stump rooted but tapering slightly, smooth, deep orange-red in color. The flesh is very crisp.

CAULIFLOWER

Cauliflower, although one of the most delicious vegetables, is but little grown except by professional gardeners because of the erroneous notion that it is so difficult to grow that only skilled gardeners can produce it. Any one will be reasonably sure of success with this most desirable vegetable if the cultural directions given below are carefully followed.

For spring and early summer crop, sow in March or early in April in hotbed. If soil is not too wet, seed should be thoroughly pressed into the ground after sowing. This insures quick germination. Cover seed with one-half inch of fine soil firmly pressed down. Transplant to cold-frame when sufficiently large to handle. As soon as danger of hard freezing is over set in the open ground in rows two and one-half to three feet apart and eighteen inches apart in the row. The plants will endure a light frost. The soil for cauliflower should be like that for cabbage, but it is better if made richer than is ordinarily used for that crop. Plenty of good manure must be well incorporated with the soil and the latter be brought into the highest state of tilth. No application, however, can be more necessary or more useful than that of cultivator and hoe.

For late crop, sow at same time as for late cabbage and treat in the same manner. It should be borne in mind that cauliflower will not head up well in hot, dry weather and hence the sowings need to be so timed as to bring the heads to maturity either before the hot summer weather sets in or not until the cooler weather of the fall. If it receive at this time a liberal supply of water, the size and quality of the heads will be greatly improved. After the head begins to form, draw the leaves over and tie them together to protect it from the sun and to keep it white. The heads should be cut for use while the "curd" is compact and hard, as they soon become much impaired in quality and appearance after they open and separate into branches.

Of the enemies of the crop, none is more formidable than the cabbage root maggot. This seems to have a special liking for the cauliflower. Probably the best and most surely effective protective measure is enveloping each plant with a tight fitting collar of tarred felt. Plant lice are also serious pests of this crop. Effective remedies are dusting with fine tobacco dust, or spraying with strong tobacco tea or kerosene emulsion.

Our cauliflower trials for several years included samples of seeds from some of the most skillful American growers and while their stocks produced hardy, vigorous plants the heads formed were uniformly more open in the curd and matured a little later than those grown from the best imported seed. All the cauliflower seed we offer is produced by the most experienced growers in Europe, in such localities as are best suited to its proper development and the greatest care is taken to save seed from perfectly developed plants only.

Early Snowball Unquestionably the earliest maturing strain of the true short leaved Snowball type of cauliflower. It is admirably adapted for forcing or wintering over for early crop and is the most popular sort for these purposes, also one of the best sorts for late summer and fall crop. Early Snowball is, moreover, a most desirable sort for the home garden. The plants are compact, with few short, outside leaves and are well-suited for close planting. The heads are of medium to large size, solid, compact, round, very white and curd-like and are developed earlier than those of any other sort. In our many comparative trials of samples from the best known growers and prominent seedsmen in Europe and America our stocks of Early Snowball have been unsurpassed by any in earliness. They also gave the highest percentage of well formed heads. After a careful inspection of the fields of the most expert Danish and other European growers we know we are in position to supply the most critical trade with seed which can be depended upon as the very best. **Pkt. 10c; ¼ Oz. 75c; Oz. \$2.50; 2 Oz. \$4.50; ¼ Lb. \$8.00**

EARLY SNOWBALL

Extra Early Dwarf Erfurt A remarkably sure heading early cauliflower. It is of dwarf habit with short outside leaves and is similar in most respects to Early Snowball, and nearly as early. The heads when ready for market are of medium to large size. The curd is white, exceptionally deep and of finest quality. It will give excellent results either in the home garden or for market use and is superior to most seed sold at higher prices. Where extreme earliness is not the greatest consideration we recommend this strain after having proven it superior to many stocks offered as Snowball. **Pkt. 10c; ¼ Oz. 75c; Oz. \$2.50; 2 Oz. \$4.50; ¼ Lb. \$8.00**

Danish Giant, Dry Weather An excellent second early variety especially adapted for growing in the open ground. Recommended for localities subject to long dry seasons as it will often produce heads of fine quality under these conditions while other sorts are total failures. Heads of medium to large size, very solid, pure white and of fine quality. **Pkt. 10c; ¼ Oz. 75c; Oz. \$2.50; 2 Oz. \$4.50; ¼ Lb. \$8.00**

Large Algiers A valuable late sort, sure to head, of excellent quality and popular with market gardeners. The plant is large but of upright growth, the leaves protecting the heads so that they will endure uninjured a frost that would ruin most other sorts. This is one of the very best of the late varieties. **Pkt. 10c; Oz. \$1.00; 2 Oz. \$1.70; ¼ Lb. \$3.00**

Veitch's Autumn Giant A distinct and valuable late variety with long stems and dark green leaves. The heads are very large, white, firm and compact and being well protected by foliage, remain a long time fit for use. The plants should be started and transplanted early in the season to insure their full development. **Pkt. 10c; Oz. 65c; 2 Oz. \$1.15; ¼ Lb. \$2.00**

CELERY

Sow the seed (which is slow to germinate) from about February 20 to April 20 in shallow boxes indoors or sow in a finely prepared seed bed out of doors in April in straight rows so that the small plants may be kept free from weeds. See to it that the seed is not covered too deep and that the bed is kept moist, almost wet, until the seeds germinate, as plenty of moisture is essential to get a satisfactory growth. The seed will not germinate well if planted in a hotbed or where subjected to a temperature above 60° F. When the plants are one to two inches high, thin out and transplant so that they may stand two or three inches apart each way. When they are four inches high, cut off the tops, which will cause the plants to grow stocky. Plants are usually set out when about five inches high. It is well to cut off the lower half of the roots before transplanting.

The crop is usually made to succeed some earlier one, but in order to grow good celery the soil must be made as rich as possible, the essentials to success being very rich soil and plenty of water. If good plants are used, they may be set out as late as the middle of August, but the best results are usually obtained from setting about the middle of June or first of July. The most desirable time will depend upon local climate and is that which will bring the plants to maturity during cool, moist weather. In setting, prepare broad trenches about six inches deep and four to six feet apart, in which the plants should be set six inches apart, cutting off the outer leaves and pressing the soil firmly about the roots. The compacting of the soil excludes the air from the roots until new rootlets are started. The only care now necessary for about six weeks is to keep the plants free from weeds by frequent cultivation.

When the plants are nearly full grown they should be "handled," which is done by gathering the leaves together while the earth is drawn about the plant to one-third its height, taking care that none of it falls between the leaves, as it would be likely to cause them to rust or rot. After a few days draw more earth about them and repeat the process every few days until only the tops of the leaves are visible. Or it may be blanched by pressing the leaves together with two wide boards held in place by stakes or by wire hooks at the top. This is the method commonly used by market gardeners and the rows need to be only about three feet apart, but celery so blanched is not so good in quality and is more likely to become pithy than that blanched with earth. Care should be taken that the plants are not disturbed while they are wet or the ground is damp; to do so increases the liability to injury from rust. A part of the crop may be simply "handled" and then at the approach of severe freezing weather taken up and set out compactly in a dark cellar or an unused cold-frame, where the temperature can be kept just above the freezing point and it will then gradually bleach so that it may be used throughout the winter. Should the plants begin to wilt, water the roots without wetting the stalks or leaves and they will revive again.

Golden Yellow Self Blanching This is the standard celery for early use. It is in condition as early in the fall as any and we have yet to find a strain better in quality and appearance than our stock of Golden Yellow Self Blanching. Critical gardeners generally depend upon our stock to produce their finest early celery. It is excellent for the home garden. The plants are of medium size, compact and stocky, with yellowish green foliage. As they mature the inner stems and leaves turn beautiful golden yellow so that blanching is effected at a minimum expenditure of time and labor. Its handsome color, crispness, tenderness, freedom from stringiness, and fine nutty flavor have established it as a superior first early sort. Pkt. 10c; ½ Oz. 60c; Oz. \$1.00; 2 Oz. \$1.75; ¼ Lb. \$3.25; Lb. \$12.00

Wonderful This variety is similar in many respects to Golden Yellow Self Blanching. It matures fully as early as that variety and in many localities has been found to be more resistant to attacks of blight and rust. The plants are semi-dwarf, stocky and vigorous growing with very full heart which bleaches quickly to a rich golden yellow color. Of very attractive appearance, superior quality and fine nutty flavor. Recommended as a very profitable variety for growers for either the home or distant markets and also as a desirable sort for the home garden. Pkt. 10c; ½ Oz. 60c; Oz. \$1.00; 2 Oz. \$1.75; ¼ Lb. \$3.25; Lb. \$12.00

White Plume A handsome, very early variety. The leaves are light, bright green at base, shading nearly white at tips. As the plants mature, the inner stems and leaves turn white and require to be earthed up but a short time before they are in condition for use. Although very attractive, we do not think that it compares favorably with the Golden Yellow Self Blanching either in flavor or solidity, or that it will remain in condition for use as long. White Plume has been much in demand as a market sort on account of its very attractive appearance and requiring a very short time for blanching. It is suitable also for the home garden. Pkt. 10c; Oz. 35c; 2 Oz. 60c; ¼ Lb. \$1.00; Lb. \$3.50

Easy Blanching A comparatively new early variety recommended for both the home and market garden. The plants make a rapid and vigorous growth producing rather thick, solid stalks of excellent quality and rich nutty flavor. Although one of the earliest varieties to blanch it is also an excellent keeper and if stored when green will be found to be as satisfactory in this respect as many of the late maturing sorts. Pkt. 10c; Oz. \$1.00; 2 Oz. \$1.60; ¼ Lb. \$2.75; Lb. \$10.00

Columbia An early maturing sort of most excellent shape and quality for the home market and private garden. It is extensively grown for shipment. The plant is of medium height but very stocky and heavy. The stalks are thick, almost round, resembling in shape those of Giant Pascal. The outer foliage of the plant when growing is rather light green with tinge of yellow, becoming when blanched yellow with tinge of green. The heart when properly blanched changes from yellow with tinge of green to a light golden yellow. In season it follows in close succession Golden Yellow Self Blanching. We consider it unsurpassed in its rich nutty flavor. Pkt. 10c; Oz. 50c; 2 Oz. 85c; ¼ Lb. \$1.40; Lb. \$5.00

Giant Pascal This is a green leaved variety developed from the Golden Yellow Self Blanching and we recommend it as being of the very best quality for fall and early winter use for the home garden and market. It blanches to a beautiful yellowish white color, is very solid and crisp, and of a fine nutty flavor. The stalks are of medium height, very thick, the upper portion nearly round but broadening and flattening toward the base. With high culture this variety will give splendid satisfaction as a large growing sort for fall and winter use. In the south it is prized more than almost any other kind. Pkt. 10c; Oz. 40c; 2 Oz. 75c; ¼ Lb. \$1.10; Lb. \$4.00

GOLDEN YELLOW SELF BLANCHING

CELERY—Continued

Winter Reliance This is considered the most attractive in color and the best in quality of any of the late keeping sorts. The plants are moderately dwarf, erect and compact, with solid heart. The habit of growth is very well adapted for late keeping. When ready for the late market the stalks are a very attractive light creamy yellow. The quality is unsurpassed by any variety of its class and is decidedly superior to most of the older, long keeping sorts. We recommend it as the best variety for the late market. **Pkt. 10c; Oz. 40c; 2 Oz. 75c; ¼ Lb. \$1.10; Lb. \$3.75**

French's Success A late maturing variety which keeps the best of any celery yet introduced. The growth is compact and short in stem so that the plants may be well earthed up for blanching while growing close together. The foliage is dark green. The heart is large, solid and is formed early. The stalks become when blanched almost white or very light creamy yellow, thick, yet brittle, without stringiness and of good quality. It requires more time to mature than some sorts but remains firm, solid and in fine condition until late in the spring. **Pkt. 10c; Oz. 40c; 2 Oz. 75c; ¼ Lb. \$1.10; Lb. \$3.75**

Soup or Cutting Celery This is not suitable for blanching but the seed is sown thickly in rows. The tops grow very rapidly and furnish a succession of cuttings throughout the season. The stalks are cut when three or four inches high for use as flavoring for soups or stews. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25**

CELERY SEED FOR FLAVORING. Oz. 10c; 2 Oz. 15c; ¼ Lb. 20c; Lb. 50c

CELERIAC or Turnip Rooted Celery

In this kind of celery, the roots and not the leaf-stalks have been developed by cultivation. The roots, which are the edible portion, keep well for winter use and are excellent for soups and stews. They are also cooked and sliced as a salad.

Sow seed at the same season and give the same treatment as common celery. Transplant to moist, rich soil, in rows two feet apart and six inches apart in row. Give thorough culture. It is not necessary to earth up or "handle" the plants. After the roots have attained a diameter of two inches, they are fit for use.

To keep through the winter pack in damp earth or sand and put in the cellar or leave out of doors, covering with earth and straw like beets and carrots.

Large Smooth Prague An improved variety of turnip rooted celery producing large roots of nearly globular shape and comparatively smooth surface. **Pkt. 10c; Oz. 30c; 2 Oz. 55c; ¼ Lb. 90c; Lb. \$3.00**

CHERVIL

A hardy annual with aromatic leaves somewhat resembling parsley and by many considered superior to it in flavor. The young leaves are used in soups and for flavoring and garnishing meats and vegetables.

Sow in early spring in rich, well prepared soil. The seed is slow to germinate, sometimes remaining in the earth four or five weeks before the plants appear. When the plants are about two inches high, transplant or thin to about one foot apart. They are ready for use in six to ten weeks from sowing.

Curled This very finely curled, double sort is much superior to the plain variety, being early maturing, handsomer and having fully as fine fragrance and flavor. **Pkt. 10c; Oz. 25c; 2 Oz. 40c; ¼ Lb. 75c; Lb. \$2.50**

CHICORY

Large Rooted or Coffee The dried and prepared roots are much used as a substitute for coffee, and the young leaves may be used as a spring salad. Our stock is the improved type, with very much larger, smoother, whiter and proportionately shorter roots than the old kind.

Sow seed as early in spring as the ground can be prepared, in rather light, moderately rich soil, in drills two to two and one-half feet apart for either garden or field culture. When the plants are sufficiently large, thin to six inches apart in the row and cultivate well. **Pkt. 10c; Oz. 25c; 2 Oz. 40c; ¼ Lb. 75c; Lb. \$2.25**

Small Rooted or Radichetta The tops of this variety are very desirable for use as a salad. The leaves are long, narrow, entire or slightly toothed and blanch readily when the plants are grown close together. The roots are long and slender, averaging about one-half inch in diameter and from six to eight inches long.

Sow seed as early in spring as possible, preferably in wide strips or blocks. Deep, rich, loomy soil which has been manured the previous year is essential for the best results. Keep clear from weeds and thin sparingly. Where climate permits seed may be sown about mid-winter. **Pkt. 10c; Oz. 25c; 2 Oz. 40c; ¼ Lb. 75c; Lb. \$2.50**

Witloof (*French Endive*) The leaves and leaf-stems of this variety are blanched and used as a salad like Endive or Cos Lettuce.

Sow seed about one inch deep in the open ground in May or June in rows about eighteen inches apart. Thin plants to six inches apart in the row. In the fall the roots should be lifted, the leaves trimmed to within one and one-half inches of the crown, the side roots broken off and the roots shortened to a uniform length of about nine inches. The roots are then placed upright in a trench about eighteen inches deep, setting the roots about two inches apart and the crowns at a depth of about nine inches below the level of the top of the trench. Fill in the trench with fine rich soil. If more rapid growth is desired cover the rows with a mulch of manure about one and one-half feet deep. The new tops will attain the proper size in from four to six weeks. **Pkt. 10c; Oz. 30c; 2 Oz. 55c; ¼ Lb. 90c; Lb. \$3.00**

CHIVES—Allium Schoenoprasum An onion-like plant used as a salad and for flavoring soups. It also makes an excellent ornamental garden bed edging which may frequently be cut, a new growth of leaves appearing soon after each cutting. The plants grow about ten inches high. One sowing will answer for about three years. **Pkt. 10c; Oz. \$1.00; 2 Oz. \$1.70; ¼ Lb. \$3.00**

COLLARDS

This is a tall, loose leaved cabbage-like or kale-like plant grown throughout the south and known in different sections as "Cole," "Colewort," or simply "Greens." It is extensively used for the table as well as for stock feeding in the south where it continues in growth and is usable throughout the entire winter. Collards usually succeed in locations where cabbage cannot be grown to perfection.

Sow the seed thickly in drills, in rich ground, transplanting when about four inches high; or sow in drills where the plants are to remain and when well started thin to two or three feet apart in the row. In the south, seed may be sown from January to May and from August to October.

Georgia, Southern or Creole This is the white or green stemmed variety, growing two to three feet high and forming a large, loose, open head or cluster of leaves with a rather long stem. A frost, if not too severe, will improve rather than injure the quality of the leaves. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 30c; Lb. \$1.00**

CHARLEVOIX

CORN

SWEET OR TABLE VARIETIES

A rich, warm, alluvial soil is the best, but excellent sweet corn can be raised on any good, ordinary soil, if it is deeply and thoroughly worked before planting. In the north sweet corn may be planted as early as can be done without risking great loss from frosts or from rotting of the seed in the soil, but with the main crop varieties especially, it is well to wait until the ground has become warm as the sweeter varieties are more sensitive to cold and wet than field corn or varieties of inferior quality.

If planted in rows, make the rows three to four feet apart, according to the vigor of growth of the variety, and place the seed twelve to sixteen inches apart in the row, covering one inch deep with fine soil firmly pressed down.

If planted in hills, make the hills for the early varieties three feet apart each way and plant four to six kernels to the hill. For the later sorts the hills should be three and one-half to four feet apart each way. Hoe frequently and when six inches high thin so as to leave three or four plants in the hill. Give frequent and thorough but shallow cultivation until the tassels appear.

Alpha The earliest sweet corn. Matures a week to ten days ahead of Mammoth White Cory. The ears average six to seven inches long, are uniformly eight rowed, fully equal in quality to Mammoth White Cory with skin a trifle more tender. The stalks are very uniform in height averaging about four feet. Ears are set low and close to the stalks. For the market grower who reaps an extra profit by getting his produce on the market ahead of his competitors this will be a money-maker; for the home gardener it will produce desirable ears for the table a week ahead of the next earliest variety. (See further description on page 6.) Pkt. 10c; Lb. 40c; 2 Lbs. 70c postpaid; 100 Lbs. \$25.00

Mammoth White Cory We consider this one of the best extra early varieties for the market and home garden. The ears are very large for so early a variety. The stalks are about four feet high, each generally bearing two large, finely shaped ears which become fit for use very early. They are twelve rowed, six to seven inches long, very symmetrical and handsome, seldom with any opening between the rows at the base. The grain is large, broad, very white and of remarkably good quality for such an early sort. Pkt. 10c; Lb. 35c; 2 Lbs. 60c postpaid; 100 Lbs. \$20.00

Golden Bantam This is an early sweet corn with golden yellow grain, very tender and of excellent quality. The ears are eight rowed, six to seven inches long and of the medium size found most suitable for the table. The flavor is exceptionally rich and delicious. The stalks are four to five feet high. Our stock of this splendid home garden and market variety has been very carefully selected and is decidedly superior to much that is offered. Pkt. 10c; Lb. 35c; 2 Lbs. 60c postpaid; 100 Lbs. \$20.00

Crosby's Early A most excellent early variety of fine quality. The ears are five and one-half to six and one-half inches long, fourteen rowed or more, with short nearly square grains which are very white, sweet and tender. The stalks are about four and one-half feet high. This variety is desirable for the home garden and market. It is a sort largely grown in Maine for canning. Pkt. 10c; Lb. 35c; 2 Lbs. 60c postpaid; 100 Lbs. \$20.00

Charlevoix An early or intermediate, yellow grained sweet corn of distinctive merit. Ears about seven inches long, usually twelve rowed and when in condition for use are light creamy yellow in color. The grain is rather short, very sweet and tender and is unsurpassed in quality. In season it is a few days later than Golden Bantam, but remains in condition much longer than that variety. An excellent sort both for the home and the market garden. Pkt. 10c; Lb. 40c; 2 Lbs. 70c postpaid; 100 Lbs. \$22.00

Early Minnesota This deservedly popular variety is one of the best second early sorts for the market and the home garden. The stalks are about six feet high bearing one or two ears well covered with husks. The ears are about eight inches long, eight rowed; kernels very broad, white, sweet and tender, not shrinking much in drying. Pkt. 10c; Lb. 35c; 2 Lbs. 60c postpaid; 100 Lbs. \$20.00

Kendel's Early Giant Remarkably large in ear for a second early sort and extensively grown in some localities for the market. The stalks are about five and one-half feet high. The ears are about eight to ten inches long, twelve rowed. The grain is white, rather broad and shallow, and the quality very good. Pkt. 10c; Lb. 35c; 2 Lbs. 60c postpaid; 100 Lbs. \$18.00

Early Sweet or Sugar The ears of this second early table corn are very long, about nine inches, slender, eight rowed, and the grain is white, tender and sugary. The stalks are about six feet high, hardy and productive. Our stock is distinct and true and not such a mixture of all sorts of early sweet or sugar corn as has been often offered under this name. Pkt. 10c; Lb. 35c; 2 Lbs. 60c postpaid; 100 Lbs. \$18.00

Black Mexican This corn, when very young, cooks remarkably white, but the ripe grain is bluish black. For home use we consider it the best second early sort where tenderness and sweetness are the qualities most desired. It does especially well as a second early variety in the south. The stalks are about six and one-half feet high. The ears are about eight inches long and are usually eight rowed. Pkt. 10c; Lb. 35c; 2 Lbs. 60c postpaid; 100 Lbs. \$18.00

Not less than 10 pounds at the 100 pound rate. One hundred pound prices do not include transportation; if ordered shipped prepaid add 8c per pound to the 100 pound price. We do not put up half pounds of corn.

CORN

SWEET OR TABLE VARIETIES—Continued

Ferry's Early Evergreen This excellent sort, introduced by us in 1898, has proven its merit as the best evergreen strain that is distinctly earlier than Stowell's. The strain we offer has to a remarkable degree, all the qualities that have made Stowell's Evergreen the leading main crop sweet corn for so long a time. The ears of Ferry's Early Evergreen are about seven to seven and one-half inches long, with fourteen to twenty more or less irregular rows with very deep, white grain of the very best quality. Stalks about six and one-half to seven feet high. A very desirable main crop variety for home garden and market, and well adapted for canning. Pkt. 10c; Lb. 35c; 2 Lbs. 60c. postpaid; 100 Lbs. \$18.00

Stowell's Evergreen The standard main crop variety, much used for the home garden, market and canning. It is hardy and productive, very tender and sugary, remaining a long time in condition suitable for boiling. Our stock has been carefully grown and selected to avoid the tendency to a shorter grain and deterioration in the evergreen character of this best known of all late sorts. The ears about seven to eight inches long, fourteen to twenty rowed, with very white grain. The stalks are about seven and one-half feet high. Pkt. 10c; Lb. 35c; 2 Lbs. 60c. postpaid; 100 Lbs. \$18.00

Country Gentleman This variety has a small, white cob, densely covered with irregular rows of very long slender, white grains of excellent quality. The ears are seven to nine inches long. The stalks are from six and one-half to seven feet high. It is well adapted for canning as well as the home garden and market, and many consider it as the best of the late varieties. Pkt. 10c; Lb. 35c; 2 Lbs. 60c. postpaid; 100 Lbs. \$20.00

Mammoth This variety, also called Late Mammoth, produces the largest ears of any sweet corn. It is noted for the immense size of the ears, which are often twelve inches long, but the grain is very white, sweet, tender and delicious. They are sixteen or eighteen rowed. The stalks are very large, about eight feet high. Pkt. 10c; Lb. 35c; 2 Lbs. 60c. postpaid; 100 Lbs. \$20.00

FIELD VARIETIES

Extra Early Adams Very early and used extensively for a first early table corn in the south. The stalks are about four feet high, with small tassel, very few leaves, and without suckers. The ears are short, very full, twelve or fourteen rowed, often nearly as thick as they are long and are well covered with coarse husks. The kernels are white and smooth. This is an extremely hardy variety which can be grown closer together than most sorts. Pkt. 10c; Lb. 30c; 2 Lbs. 50c. postpaid; 100 Lbs. \$15.00

Early Adams or Burlington An excellent early field variety and often used for table, particularly in the south. The ears are about eight inches long, twelve or fourteen rowed. The kernels are white, rounded, somewhat deeper than broad and indented at the outer end which is whiter and less transparent than the inner. The stalks are about six feet high. Pkt. 10c; Lb. 30c; 2 Lbs. 50c. postpaid; 100 Lbs. \$15.00.

POP CORN

Black Beauty We believe this is not only the earliest maturing variety in cultivation but it is ready for popping earlier than any other sort. It pops very large and exceptionally white. The kernels are black but this color is not noticeable after popping, when this sort is the largest and most tender of all. The ears are about six inches long, twelve rowed. The kernels are smooth, shallow and are nearly square. Pkt. 10c; Lb. 35c; 2 Lbs. 60c. (shelled) postpaid; 100 Lbs. \$18.00

Japanese Hulless Also known as Australian Hulless, Tom Thumb, etc. A dwarf growing variety producing a heavy yield of short but very thick ears, averaging three and one-half to four inches long and about two inches in diameter. The kernels are similar to those of White Rice, but are longer and more slender. When properly cured will produce a larger proportion of popped kernels than any other variety. Tender and delicious when popped and free from any hull or shell. Pkt. 10c; Lb. 35c; 2 Lbs. 60c. (shelled) postpaid; 100 Lbs. \$20.00

Golden Hulless This new pop corn is the same in size and shape of ear and kernel as Japanese Hulless, but is a rich golden yellow in color. It pops almost perfectly when properly cured and the golden color adds to its attractiveness. We have tried this out thoroughly and find it a very desirable addition to the list of pop corns. Pkt. 10c; Lb. 35c; 2 Lbs. 60c. (shelled) postpaid; 100 Lbs. \$18.00

White Rice A very handsome and prolific white variety. The ears are five to seven inches long. The kernels are long, pointed and somewhat resemble rice. This excellent rather late maturing variety yields heavily and is considered the best pop corn for parching. Pkt. 10c; Lb. 30c; 2 Lbs. 50c. (shelled) postpaid; 100 Lbs. \$15.00

Not less than 10 pounds at the 100 pound rate. One hundred pound prices do not include transportation; if ordered shipped prepaid add 8c per pound to the 100 pound price. We do not put up half pounds of corn.

COUNTRY GENTLEMAN

CORN SALAD—Fetticus or Lamb's Lettuce

This is a small, quick growing salad plant for late fall, winter and spring use. The leaves are used as a substitute for lettuce and spinach.

During August and September sow the seed in shallow drills about one foot apart, covering with about one-fourth inch of fine soil firmly pressed down. On the approach of severe cold weather, cover with straw or coarse litter. The plants will also do well if the seed is sown very early in spring and like most salad plants, are greatly improved if sown on very rich soil. The seed we offer is extra cleaned. Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.50

CUCUMBER

This is one of the vegetables that can be grown to perfection by any one who can control a few square yards of reasonably good soil that is fully exposed to the sun. Every family should be supplied from its own garden, since the fruit is so much better when gathered fresh from the vines as desired for use than it is in the more or less wilted condition in which it is found on the market.

In order to obtain the largest yield of cucumbers, the soil should be well enriched with well-rotted manure, but an abundance of good fruit can be raised on any rich garden soil. Plant the seed not over an inch deep in hills four to six feet apart each way, dropping fifteen to twenty seeds in a hill. After the plants begin to crowd and danger from the striped beetle is pretty well over, thin to three plants to the hill. Give frequent but shallow cultivation until the plants make runners so long that this is impracticable.

In field culture, plow furrows four feet apart and similar ones at right angles to the first. At each intersection drop a shovelful or more of well-rotted manure which should be well mixed with the soil. Many growers omit every sixth or eighth row, thus forming paths for the distribution of manure and gathering the fruit.

In many sections, where earliness is very important, market gardeners start plants in boxes made like the ordinary berry box, but without the raised bottom. The boxes are set in hot-beds or cold-frames, filled with rich, friable soil and the seed planted. When danger of frost is over, the plants are set in the open ground, the boxes being cut away, so that the roots are not disturbed at all.

The striped cucumber beetle is often very destructive to young plants. These beetles, when not very numerous, are usually kept from doing serious damage by dusting the plants with fine road earth. Tobacco dust and plaster may be used with impunity. Lime and ashes are more effective but will injure the plants if used too freely. We spray our fields, at intervals of ten days through the season, with Bordeaux mixture to which has been added Paris green, which is a poison for biting insects and a preventive of blight. The best protection against injury is a vigorous and rapid growth of the young plants.

Pick the fruit as soon as it is large enough and before it begins to ripen, as the vines will cease setting fruit as soon as any seed begins to mature. In gathering for pickles, cut the stem instead of pulling the fruit off and be careful not to mar the fruit in any way, for if the skin be broken the pickles will not keep so well.

We pay particular attention to growing and selecting the various strains so as to keep them pure and true to name.

Early Cluster An early and very productive variety. The vines are hardy and very vigorous, bearing fruits in clusters of two or three. The fruits are short, thick, bright green, shading lighter at blossom end, crisp and tender. This sort is planted in many sections for the home garden. It is extensively used for a pickling cucumber as well as for slicing. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25**

Early Short Green This variety is known also as Early Frame. It is an early, bright green cucumber of medium size, very extensively used for slicing and pickling. The vines are very vigorous and productive. The fruits are straight, a little smaller at the ends, bright green in color, shading lighter at the blossom end. The flesh is crisp and tender. The variety is extensively used for the home garden. Our stock is very superior. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25**

Snow's Pickling An early maturing, very small, dark green cucumber, cylindrical, square ended, and very popular with growers for small pickles. We have been growing this variety ourselves for several years, giving special attention to purity and uniformity of type and we believe the seed we offer meets in all respects the requirements of those who want an ideal bottle pickle. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25**

Chicago Pickling The fruits of this very desirable sort are of medium length, tapering at each end, with very large and prominent spines. The color is deep green. This is a very prolific variety and one of the best for those who want crisp, coarsely spined pickles. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25**

Boston Pickling This is a very productive variety that is extensively grown for pickles. The vines are vigorous. The fruits are bright green of medium size, very smooth and symmetrical. The flesh is crisp and tender. Our seed is decidedly superior to much that is offered. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25**

Jersey Pickling This variety is between the Long and the Short Green, forming a long, slender, cylindrical deep green pickle which is very crisp and tender. The vines are very vigorous and productive. The mature fruits are usually about eight to nine inches in length. This sort is desirable for slicing as well as for pickling. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25**

Early White Spine One of the best sorts for table use. The vines are vigorous, fruiting early and abundantly. The fruits are uniformly straight, dark green, fairly well covered with white spines and when mature are usually about seven inches in length. The flesh is crisp, tender and of excellent quality. The variety is much used for the home garden and market. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25**

Klondike A medium early, white spined cucumber of handsome, very dark green color and of excellent quality for slicing. The vines are very hardy and productive. The mature fruits when grown under favorable conditions are often about eight inches in length, and are uniform in size and shape. The color is very dark green, slightly striped at the ends. The dark green color is retained much longer and is affected less by the hot sun than any other sort with which we are familiar. Its uniform size and shape and splendid color are making this variety very popular as a shipping sort. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25**

Kirby's Stays Green This is a dark green, medium sized cucumber of the white spine class. The fruits are seven to eight inches long, cylindrical in shape, and a fine glossy green in color. They retain their fine color for a remarkably long time and on that account are very well adapted for shipping. The young fruits are desirable for small pickles and the mature fruits are very satisfactory in shape and size for packing. The variety is becoming popular with commercial growers and is proving a good home garden sort. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.50**

Early Fortune An excellent shipping variety producing very attractive white spined fruits of rich dark green color. The fruits average uniformly about nine inches long, cylindrical or slightly tapered at ends. The seed cavity is small and the flesh thick, crisp and tender. Plants vigorous growing and productive. Recommended as one of the best shipping sorts yet introduced. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.50**

Davis Perfect Fruits very deep green in color, rather long, averaging ten inches or more in length, white spined, quite slender, symmetrical, tapering slightly at both ends. Flesh is crisp, tender and of good quality. The seed cavity is small. The vines are very vigorous growing and quite productive. Recommended as one of the best sorts for shipping as it retains its attractive dark color for a long time after pickling. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.50**

KLONDIKE

CUCUMBER—Continued

Evergreen White Spine The fruits of this very desirable table sort are long, cylindrical, very dark green, with very white, crisp and tender flesh. The vines are vigorous and productive and come into full bearing somewhat later than Early White Spine. The mature fruits are about eight to ten inches in length. This variety is adapted also for forcing. **Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 55c; Lb. \$1.75**

Improved Long Green The stock we offer under this name is in a class by itself. The vines are very vigorous and productive. The fruits are very long, often twelve to fifteen inches when mature. They are uniformly slender and of beautiful dark green color. The large warts and spines are well distributed over the surface instead of being clustered at one end as in inferior stocks. The variety furnishes some fruits early but matures the bulk of its crop rather late. It is a standard sort for slicing and is very largely used for pickles. The fruits are often used for making sweet pickles. This is probably the most extensively used cucumber for the home garden and market. We have given this variety especial attention for many years and we believe the stock we offer has no equal. **Pkt. 10c; Oz. 25c; 2 Oz. 40c; ¼ Lb. 75c; Lb. \$2.50**

Lemon A very productive variety with round or slightly oval fruits of light creamy yellow color; of distinctive flavor and desirable quality either for slicing or pickling. The fruits are ready for slicing when just starting to turn yellow. For pickling they may be used either green or ripe. **Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 55c; Lb. \$1.75**

Small Gherkin (For Pickles) This is a very small, oval, prickly fruited sort quite distinct from all others and grown exclusively for pickles. It is the smallest of all the varieties and should always be picked when young and tender. The seed is distinctly smaller than that of other cucumbers and is slow to germinate, requiring usually from two to three weeks. **Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 60c; Lb. \$2.00**

CRESS As early in spring as the ground can be worked sow the seed in rich, well prepared soil, in shallow drills about sixteen inches apart, covering with about one-half inch of fine soil firmly pressed down. When the young plants are well started thin four to six inches apart in the row. For succession plant every two weeks, thinning out as required for use. Keep off insects by dusting with Pyrethrum powder.

Curled or Pepper Grass The leaves of this small salad are much frilled or curled, and are used for garnishing. It is also desirable with lettuce, to the flavor of which its warm, pungent taste makes a most agreeable addition. The plant is of rapid growth, about one foot high. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 30c; Lb. \$1.00**

True Water This is a distinct variety of cress with small, oval leaves. It thrives best when its roots and stems are submerged in water. A fair growth may be obtained in soil which is kept wet but does best when grown along moist banks or in tubs in water-covered soil. It is one of the most delicious of small salads and should be planted wherever a suitable place can be found. The seed is usually sown and lightly covered in gravelly, mucky lands along the borders of small, rapid streams. The plants will need no subsequent culture, as under favorable conditions they increase very rapidly by self-sown seed and extension of the roots. When gathered for the market the shoots should be cut, not broken off. In summer it is best to cut them closely, the oftener the better. **Pkt. 10c; Oz. 45c; 2 Oz. 80c; ¼ Lb. \$1.25; Lb. \$4.50**

DANDELION Sow early in spring, in very warm, rich soil, in drills eighteen inches apart; thin to five inches apart and cultivate well; they will be fit for cutting the next spring. When grown for the roots, sow in September and cultivate well during the fall and the following summer; the roots will be fit to dig in October.

Cultivated or French Common A decided improvement on the wild dandelion. It is very early and vigorous. **Pkt. 10c; Oz. 35c; 2 Oz. 60c; ¼ Lb. \$1.00; Lb. \$3.50**

Improved Thick Leaved Unsurpassed in thickness of leaf and deep green color. It is compact and forms an upright regular tuft at the center. This cabbaging sort is much superior to the common or uncultivated dandelion. **Pkt. 10c; Oz. \$1.00; 2 Oz. \$1.60; ¼ Lb. \$2.75; Lb. \$10.00**

EGG PLANT

Seed germinates slowly and should be started in hotbed, for in this, as in all semi-tropical plants, it is important to secure a rapid and continuous growth from the first, the plants never recovering from a check received when young. When plants have two rough leaves transplant three or four inches apart. When the ground is warm and all danger not only from frosts but from cold nights is past, harden off by gradual exposure to the sun and air and decreasing the supply of water, then carefully transplant to open ground, setting two and one-half feet apart.

It is desirable to shade the young plants from very hot sun and to protect them from the potato bug which otherwise often destroys them. Some seasons egg plants will fail to set fruit or will not begin bearing until too late to mature, no matter how faithfully they may have been cared for. This is especially likely to happen if the summer is cool and rather moist. We know of no certain remedy for it, although it is a good practice to pinch off the ends of the branches after the plants begin to bloom, so that only two or three fruits will set.

Black Beauty The fruits are rich dark purple, large and symmetrical, maturing a little earlier than our Improved Large Purple but usually not quite as large. A very desirable sort for the market as the fruit holds its color a long time. **Pkt. 10c; Oz. 60c; 2 Oz. \$1.00; ¼ Lb. \$1.75; Lb. \$6.00**

Ferry's Improved Large Purple (SPINELESS) This variety is a general favorite both for market and home garden. The plant is spineless, large and spreading with light green foliage. It usually produces four to six large, oval fruits of a splendid dark purple color. The vigor and productiveness of the plants and the large size, earliness and fine quality of its fruits make it a most profitable variety for market gardeners. **Pkt. 10c; Oz. 50c; 2 Oz. 85c; ¼ Lb. \$1.40; Lb. \$5.00**

IMPROVED LONG GREEN

ENDIVE

One of the best salads for fall and winter use. Endive is not only much used for salads and garnishing but is also desirable for greens and for flavoring soups and stews.

Plants may be grown at any season of the year but are more generally used late in the fall. For early use sow about April 15th; for later supply sow in June or July in drills fourteen to twenty inches apart and when well started thin the plants to one foot apart. When nearly full grown tie the outer leaves together over the center in order to blanch the heart of the plant. By covering fresh plants every few days a succession may be kept up.

Endive for winter use may be had by making two or three successive plantings at intervals of a week or ten days during July.

Just before killing frosts are due in the fall dig the plants, using a spade or spading fork with long enough blade to insure taking plenty of soil with the roots. Store in cellar, packing the plants closely together and keep as dark as practicable. The plants must be harvested very carefully to avoid bruising the leaves and shaking the soil from the roots. When stored this way the plants will be self-blanching and of finer quality than when tied up and blanched out of doors. By arranging the storage space so that the earlier plantings can be used first, a supply can be provided until nearly spring.

Large Green Curled A hardy, vigorous growing endive with bright deep green leaves. The midribs of the outer leaves are usually tinged with rose. The dense mass of deeply divided leaves formed in the center blanches very readily to a rich cream color. This sort is highly esteemed for the market and home garden, and is much used for salads. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25**

Ever White Curled The plants are moderately dense, with divided leaves which are very light yellowish green in color, even the outer ones being very light. This variety blanches readily to an attractive creamy white. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25**

Moss Curled Plants compact growing, forming large, dense clusters of finely divided, medium green leaves which when properly blanched, are rich creamy white, crisp and tender. Leaf stems sometimes tinged light purplish red. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25**

Broad Leaved Batavian (*Escarolle*) A variety having broad, more or less twisted and waved bright deep green leaves with thick, nearly white midribs. The inner leaves form a fairly solid, clustering head which blanches to a beautiful deep creamy white and is crisp and tender. This sort is unsurpassed for salads and is much used for the home garden and market. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25**

ENDIVE, LARGE GREEN CURLED

FENNEL (*Foeniculum dulce, Finocchio*) A bulb-like vegetable which is formed above the ground at the base of the leaf stalk if the plant is well grown. Blanched and boiled it has a slightly aromatic odor and pleasant taste. Plant very branching, upright with dense thread-like foliage.

Sow early in spring, in rich, well prepared soil, in drills two feet apart and cover one-fourth to one-half inch deep. When the plants are about two inches high thin to ten inches apart in the row. When half grown, if the plants are earthed up and treated as celery, the stems will be nearly as white, crisp and palatable. Hardy annual, two to four feet high. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.50** (For Sweet Fennel see page 62)

GARLIC A bulbous rooted plant of the onion family with a strong, penetrating odor but much esteemed by some for flavoring soups, stews, etc. We frequently receive orders for garlic seed but we can supply bulbs only. Prepare ground the same as for onions, plant the cloves (separate portions of bulbs) in drills eight inches apart and four inches apart in row, covering two inches deep. When the leaves turn yellow take up the bulbs, dry in shade and lay them up in a dry loft as you would onions. **BULBS—¼ Lb. 20c; Lb. 60c.**

HORSE RADISH Horse Radish rarely produces seed but is grown from pieces of the root. For the home garden they may be set wherever a few feet of space is available, but when grown as a crop they should be set in rich, moist, well prepared ground in rows two and one-half feet apart and about eighteen inches apart in the row. Set the roots vertically, small end down, and the top of the root one to three inches below the surface of the ground. Cultivate thoroughly until the tops cover the ground, when their shade will keep down the weeds.

MALINER KREN. An improved variety introduced into this country by the U. S. Department of Agriculture. Produces more vigorous growing plants and larger, heavier roots than the common sort. **Roots—2 for 10c; 40c. per ten, postpaid. By freight or express at purchaser's expense, \$2.50 per 100.**

KALE OR BORECOLE

This is extensively grown, especially in the south during the fall, winter and spring. The leaves are used principally for greens. A favorite way is to cook them with bacon. The leaves are also used for garnishing.

Where climate permits seed may be sown any time from August to October, broadcast or preferably in drills eighteen inches apart so that the plants when small may be cultivated. The quality is improved rather than injured by frosts if not too heavy. Farther north sow in April or May in rich light soil in rows two to three feet apart and where plants of the largest size are desired thin to two feet apart in row. It is better not to cut or handle the plants while frozen, but if this is unavoidable, thaw them out in cold water. The young shoots which start up in the spring from the old stumps are very tender and make excellent greens.

Tall Green Curled Scotch The plant of this variety grows to three or four feet high, bearing long, plume-like, light green leaves which are deeply cut, also finely curled at edges. Very ornamental and so hardy that a moderately heavy frost improves rather than injures its quality. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25**

Dwarf Curled Scotch A finely curled, spreading, low growing variety, very hardy and much used for greens. This sort, sometimes called Norfolk, is grown extensively in the south for shipment and is planted largely for the home garden. The leaves are long and attractive bright green. This sort is often used for garnishing. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25**

Dwarf Purple Similar to Dwarf Curled Scotch but the leaves are deep green and purple. It is very attractive in its rich purplish coloring. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.50**

Siberian A very vigorous growing variety of spreading habit, its green foliage having a distinctive bluish tinge or bloom. The leaves are very large, comparatively plain in the center but are cut and frilled at the edges. The variety is very hardy, a favorite for greens and in some sections is extensively grown for forage. This sort is sometimes called Sprouts. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 30c; Lb. \$1.00**

KOHL RABI The edible part is the turnip-shaped bulb formed above ground. It is tender and excellent when used before fully grown, combining somewhat the flavors of cabbage and turnip. Seed should be sown in light, rich soil as early in spring as possible in rows one and one-half feet apart and when well established thin to six inches apart in the row. Plantings at intervals of ten days will give a succession until hot weather, when they fail to grow well. Plantings may be made the latter part of July for fall use.

Early White Vienna (*Extra for forcing*) This variety is extremely early with distinctly small tops. The bulbs are of medium size, very light green or nearly white, and are of best quality for the table if used when about two inches in diameter. **Pkt. 10c; Oz. 30c; 2 Oz. 55c; ¼ Lb. 90c; Lb. \$3.00.**

Early Purple Vienna Very early, with small top, the leaf stems being tinged with purple. Bulbs of medium size, purple; flesh white. Desirable for forcing and early outdoor planting. **Pkt. 10c; Oz. 30c; 2 Oz. 55c; ¼ Lb. 90c; Lb. \$3.00**

Large Green This sort is also called Large White. It is hardy, quite late and used for feeding stock. Bulbs large, weighing eight to ten pounds when fully grown, whitish green in color; leaves large and very numerous. **Pkt. 10c; Oz. 25c; 2 Oz. 40c; ¼ Lb. 75c; Lb. \$2.50**

LEEK This belongs to the onion family and is a good fall and winter substitute for green onions. The leaves are flat, and the stems are very large, cylindrical and bulbous. Sow early in spring in drills twelve to fifteen inches apart, covering one-half inch deep. Thin plants to six inches apart in row and draw the earth about them when cultivating. If one desires very white and tender leeks transplant when about six inches high, setting four inches apart in trenches about two feet apart and gradually earth up like celery.

London Flag This well known broad leaved leek is hardy, productive, of good quality, and is extensively cultivated in this country. **Pkt. 10c; Oz. 25c; 2 Oz. 40c; ¼ Lb. 75c; Lb. \$2.50**

Large American Flag A desirable strong growing, broad leaved leek, hardy and productive. It is a favorite with many market gardeners and is also extensively used for the home garden. **Pkt. 10c; Oz. 25c; 2 Oz. 40c; ¼ Lb. 75c; Lb. \$2.50**

Large Rouen Stems very thick but comparatively short. Leaves broad covered with whitish bloom. This winter sort stands a long time in condition for use. **Pkt. 10c; Oz. 25c; 2 Oz. 40c; ¼ Lb. 75c; Lb. \$2.50**

Monstrous Carentan The largest variety, when well grown often three inches in diameter, white and tender. It is an exceptionally hardy garden sort. **Pkt. 10c; Oz. 30c; 2 Oz. 55c; ¼ Lb. 90c; Lb. \$3.00**

LETTUCE

For early outdoor culture in the latitude of Cincinnati and southward the seed may be planted in the fall, protecting the young plants from severe freezing either with frames or coarse litter which may be removed as soon as danger of severe freezing is over. Lettuce in ground out of doors will stand some freezing but is killed by prolonged frost or frequent freezing and thawing. North of Cincinnati an early crop may be secured by starting under glass from January to March and hardening off well before setting in ground, which should be done as soon as weather will permit.

Lettuce to be at its best should be grown rapidly, hence the soil should be made as rich and friable as possible by liberal manuring and thorough preparation. For general crop, sow outdoors as early in the spring as the ground can be worked, in drills eighteen inches apart and thin the young plants to four inches apart in the row. As the plants begin to crowd thin them out and use as required. For the cabbage or heading varieties where large heads are desired, the plants should be thinned ten to twelve inches apart in the row.

Varieties marked *A* are particularly adapted for culture under glass and for early spring use. Those marked *B* are sometimes grown under glass, but are especially desirable for outdoor or summer culture. Big Boston and California Cream Butter are very hardy and suited for winter outdoor culture in the south.

CABBAGE OR HEADING VARIETIES

May King *A. (Seed white)* This is a handsome, extremely early, compact, cabbage or heading variety for the home garden and market, forming very firm heads of medium size and excellent quality. The color is light yellowish green, tinged with reddish brown when mature. The inner leaves blanch rich golden yellow, very tender and buttery. The plant is very compact for so large a head. The variety is exceptionally early outdoors, attaining a size suitable for use before other sorts and is also very satisfactory for forcing. **Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 60c; Lb. \$2.00**

Salamander *B. (Seed black)* A very extensively used sort of excellent quality for the home garden and market. The variety withstands hot weather remarkably well. It forms a large compact, light green plant. The leaves are broad, thick, somewhat crumpled and closely overlapping so that the inner ones are very finely blanched. It is one of the most satisfactory heading lettuces for growing outdoors. Also sold as Early Tennis Ball. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.50**

Mammoth Black Seeded Butter *B.* A smooth leaved lettuce forming very large, compact, cabbage-like heads of thick, yellowish green leaves, the inner ones beautifully blanched, very crisp, tender and buttery. It is one of the most largely grown sorts, suitable for the home garden as well as market. **Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 60c; Lb. \$2.00**

Unrivald Summer *B. (Seed white)* A large light, bright green heading lettuce similar in habit of plant to Big Boston but a trifle earlier maturing as an outdoor summer variety and having no red or bronze shading on the leaves. Heads are large, firm and of excellent quality. **Pkt. 10c; Oz. 25c; 2 Oz. 40c; ¼ Lb. 75c; Lb. \$2.50**

Big Boston *B. (Seed white)* This market variety is very popular for outdoor culture and is also in demand as a compact, large heading, forcing sort for cold frames. The plants are large, very hardy and vigorous. The leaves are broad, comparatively smooth but wavy at the edge, thin, very hard and crisp. In color they are bright light green, the head slightly tinged with reddish brown. The inner leaves blanch to an attractive greenish white, tinged with light yellow. It heads up under cold weather conditions better than any other variety, and is grown very extensively in the south for shipment north in the winter. **Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 60c; Lb. \$2.00**

MAY KING

LETTUCE—CABBAGE OR HEADING—Continued

California Cream Butter *B. (Seed brown)*
 or **Royal Summer Cabbage** heading sort, with glossy, deep green leaves, the outer ones slightly spotted or splashed with brown. The inner leaves form a large, very solid head, rich light yellow in color, very thick, tender and buttery. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.50**

Los Angeles or New York *B. (Seed white)* Also known as Wonderful. This very large heading lettuce is desirable not only as a garden variety for summer use but is much used as a fall and winter market sort. It is the variety largely grown in California and shipped to eastern markets under the trade name of Iceberg. The plant is very large but compact and tight heading; outer leaves attractive deep green, broad, frilled at edges. The inner leaves form a large head, very sweet and tender when in condition for use. **Pkt. 10c; Oz. 30c; 2 Oz. 50c; ¼ Lb. 90c; Lb. \$2.75**

Hanson *B. (Seed white)* One of the most desirable later summer lettuces. The plant is compact and forms a large, cabbage-like head which remains in condition longer than most heading sorts. The outer leaves are bright yellowish green, broad, somewhat crumpled and frilled at edge and with distinctive midrib. The inner leaves are white, very crisp and sweet. This thin leaved curly, tight-heading sort is very extensively used for the kitchen garden as well as market. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.50**

LOS ANGELES

CURLED OR LOOSE LEAVED VARIETIES

Grand Rapids *A. (Seed black)* As a lettuce for greenhouse forcing this variety undoubtedly stands at the head of being fit to cut. The plant is upright and forms a loose cluster of large, thin, bright green leaves, savoyed, finely crimped at edges. The leaves do not wilt quickly after cutting so that the variety will stand shipping long distances better than most sorts. It is a very attractive variety and is desirable for garnishing. **Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 60c; Lb. \$2.00**

Detroit Market Gardeners' Forcing *A. (Seed white)* Excellent for growing under glass where it stands higher temperature than Grand Rapids and can be crowded to maturity. This variety is also well adapted for outdoor growing. The plant is more compact than that of Grand Rapids, is lighter colored and less frilled at the edges of the leaves which are crisp and tender. **Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 60c; Lb. \$2.00**

Simpson's Early Curled *B. (Seed white)* A very extensively used early loose leaved, or clustering variety. The leaves are light green in color, slightly frilled and much blistered, crisp, sweet and tender. The sort is especially adapted for sowing thickly and cutting when the plants are young. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.50**

Ferry's Early Prize Head *B. (Seed white)* A large-clustering, non-heading lettuce, most excellent for the home garden and undoubtedly the most easily grown variety in cultivation. It is too tender, however, to stand shipping or handling on the market. The leaves are finely curled and crumpled, bright green tinged with brownish red, and are very crisp, tender and sweet. **Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 60c; Lb. \$2.00**

Black Seeded Simpson *B.* One of the best for sowing outdoors where an exceedingly tender leaf is desired and for those markets which demand a very large loose clustering sort. The color is an attractive light yellowish green. It is used also for growing under glass or in frames. The leaves are ruffled and blistered and even the large outer ones are very tender. This curly and thin-leaved, bunching variety is uniformly attractive and remains of excellent quality a very long time. **Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 60c; Lb. \$2.00**

GRAND RAPIDS

Cos Lettuce *(Romaine)* This kind of lettuce is distinguished by its long, narrow, spoon-shaped leaves, folding into loose, sugar-loaf shaped heads which blanch better by having the outer leaves drawn about them and tied. The quality is distinct from that of the Cabbage Lettuces and by many is considered very superior.

Sow seed early in spring in rich, well prepared soil, in rows eighteen inches apart, covering one-half inch deep. When plants have two or three leaves thin to three or four inches apart. As the plants begin to crowd thin and use as required. If large heads are desired plants should be thinned ten to twelve inches apart.

Early White Self-Folding *(Seed White)* This excellent variety, also called Trianon, forms a large light green plant with a well folded head of very good quality. The midribs are white and very prominent. The inner leaves are nearly white, slightly tinged with green, and are decidedly firm and sweet. This is considered the most reliable of the Cos or celery lettuces for the home garden or market gardeners' use in this country. **Pkt. 10c; Oz. 25c; 2 Oz. 40c; ¼ Lb. 75c; Lb. \$2.25**

MUSK MELON

DAISY

After danger of frost is past, the ground being warm and in good condition, plant in rich soil, preferably sandy loam, in hills about four to six feet apart according to the vigor of the variety. Put ten or twelve seeds in a hill, covering with about an inch of fine soil firmly pressed down. When the plants begin to crowd and the striped beetles are pretty well gone thin to four of the most vigorous plants in a hill. Give frequent but shallow cultivation, until the plants make runners so long that this is impracticable. Rich earth for the young plants is far better than manure, but if the latter must be used, see that it is well rotted and thoroughly mixed with the soil.

The quality of all varieties of Muskmelons is largely dependent upon conditions of growth and ripening. Unhealthy vines or unfavorable weather produces fruit of comparatively poor flavor.

The plants are liable to attack from the striped beetles which are so numerous in some cases as to destroy them. The beetles may be kept off by frequent dusting with air-slaked lime, soot or sifted ashes diluted with fine road earth. Care should be taken not to use too much of any of the above materials or the vines will be injured. Should even the diluted material prove injurious to the vine, use road earth only, as frequent dusting with this alone will often prove effective especially if a wind is blowing. After the plants have four to six leaves it is considered a safeguard against blight to spray with Bordeaux Mixture at intervals of about ten days, adding either Paris green or arsenate of lead for the eating insects.

GREEN FLESHED VARIETIES

Extra Early Hackensack This early green fleshed variety is popular in many sections as a market melon and is also extensively used as a home garden sort. The fruits are nearly two weeks earlier than Hackensack, medium to large sized, nearly round or somewhat flattened, evenly and deeply ribbed and with very coarse netting. The skin is green, slightly tinged with yellow as the fruits mature. The flesh is green a little coarse but juicy and sweet. **Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 55c; Lb. \$1.75**

Netted Gem or Rocky Ford This has become one of the most popular of small or crate melons and is shipped in large quantities from Colorado and Arizona. It is also a desirable medium early sort for the home and market garden. The vines are vigorous and productive. The fruits are oval, slightly ribbed, densely covered with fine netting. The flesh is green, very sweet and highly flavored. We offer an exceptionally fine stock of this early sort, the fruit being very uniform in shape and quality and of the even size that is so desirable in a shipping melon. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.50**

10-25—Salmon Tint This excellent main crop melon of the Rocky Ford type is one of the most popular of shipping varieties. The fruits are nearly round or slightly oval, show no ribbing and are densely netted over the entire surface. The flesh is rich salmon at center, shading to light green at rind. The seed cavity is small and the flesh thick and of excellent flavor. **Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 60c; Lb. \$2.00**

Hackensack A well known sort of good quality. It is considered the best of the very large green fleshed melons. The vines are hardy, vigorous and productive. The fruits are nearly round, always somewhat flattened. The ribs are large and of irregular width, and the fruits are densely covered with coarse netting. The flesh is green, thick, coarse but juicy and sweet. Our stock is true to the "Turk's Cap" type. This is still an extensively grown main crop melon in some sections for the market and home garden. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.50**

ORANGE FLESHED VARIETIES

Emerald Gem A very early, yellow fleshed melon of small to medium size. One of the very best for the home garden. The vines are vigorous and productive. The fruits are globular or slightly flattened, are somewhat irregularly ribbed and very slightly netted. The skin is deep green while young, becoming slightly tinged with yellow as the fruit matures. The flesh is deep salmon-yellow, thick, ripening close to the rind, juicy, melting and very highly flavored. For the home market as well as the kitchen garden Emerald Gem leads all other kinds on account of its sweetness and convenient size. **Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 55c; Lb. \$1.75**

Daisy A comparatively new variety of special merit for the home garden or near markets. The fruits are medium to large size, nearly round, slightly ribbed and faintly netted. The skin is dark green becoming tinged with yellow as the fruits mature. The flesh is thick, fine grained, of excellent quality and of rich deep salmon yellow color. Similar in appearance to Emerald Gem, but larger and somewhat later maturing. (See illustration and further description on page 7.) **Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 60c; Lb. \$2.00**

Tip Top A well known very productive market sort in some sections. The fruits are large, nearly round, slightly ribbed and fairly well covered with shallow netting. The skin is light yellow when the fruit is mature. The flesh is deep yellow, rich and highly flavored. **Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 55c; Lb. \$1.75**

MUSK MELON—Continued

GOLD NUGGET

Extra Early Osage This excellent variety is fully a week earlier than the Osage, the fruits are a little smaller, more nearly round and the netting extends over more of the surface. These very desirable features combined with the thick salmon flesh and small seed cavity characteristic of the Osage, make this melon deserving of a place in the home and market garden. **Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 60c; Lb. \$2.00**

Petoskey or Paul Rose A well known yellow fleshed sort, suitable for the home and the market. The vines are vigorous and productive. The fruits are oval, slightly ribbed and densely netted. In general appearance they are much like Nettle Gem but larger. The flesh is orange-yellow, very thick, firm, sweet and highly flavored. **Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 55c; Lb. \$1.75**

Gold Nugget This melon combines to a greater degree than any variety we have ever seen, the requisites of a shipping sort with best qualities of the home garden type. In size it is about the same as Hearts of Gold but it is more oval in shape. The flesh is orange in color and fully as thick as any musk melon with which we are acquainted. The netting is exceptionally fine and dense, extending over practically the entire surface. The rind is thin yet very firm, so that the fruits may be shipped to distant markets in perfect condition. This melon combines the shape, size and shipping quality of Nettle Gem, with the thickest flesh and finest flavor to be found in any melon. Recently listed as Admiral Togo. **Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 55c; Lb. \$1.75**

Hearts of Gold This is an orange fleshed variety of medium size, ideal as a shipping melon and a desirable mid-season sort for the home garden. The vines are vigorous, blight resisting and very productive. The fruits are nearly round and are uniformly of medium size. The netting is exceptionally fine and dense, extending over practically the entire surface. The rind is thin yet very firm, so that the melons arrive in perfect condition in distant markets. The flesh is very thick, firm, highly colored, of fine texture and delicious flavor. **Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 60c; Lb. \$2.00**

Osage An excellent main crop medium to large, oval, salmon fleshed melon. The vines are vigorous and productive. The fruits are slightly oval, dark green, slightly ribbed and partly covered with shallow gray netting. The flesh is rich orange-salmon, very thick, fine grained and highly flavored. It is a favorite variety among growers for the later markets and is much used for the home garden. The strain we have developed has an exceptionally small seed cavity. We believe our stock to be unequalled. **Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 60c; Lb. \$2.00**

Defender One of the best yellow fleshed melons. It is excellent for shipping and is a desirable, intermediate sort for the home garden. The fruits are medium sized, oval, slightly ribbed, covered with gray netting. The flesh is firm, fine grained and of highest flavor. The color is rich, deep orange-yellow. The flesh extends to the rind and retains its color and quality quite to the outer shell which, though thin, is very hard and firm. The vines are very vigorous and productive. **Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 60c; Lb. \$2.00**

Winter Musk Melons

Honey Dew The fruits are of medium size, round or slightly oval, five to six inches in diameter and weigh about six lbs. each. The skin is smooth with an occasional net and when fruits are ripe is creamy yellow in color. Flesh light emerald green, fine grained and of very sweet, sugary flavor. Rind thin but very firm and the fruits stand shipping remarkably well. If picked shortly before fully mature the fruits will keep for several weeks. Matures about two weeks later than Rocky Ford. **Pkt. 10c; Oz. 25c; 2 Oz. 40c; ¼ Lb. 75c; Lb. \$2.25**

Honey Ball This variety is of the Honey Dew type but is smaller and earlier than that variety. Fruits round, smooth, free from ribbing and are yellowish white when ripe. The flesh is very thick and of silvery-green color. Although of rather sweet sugary flavor it has somewhat more of the spiciness of the green fleshed cantaloupes than the Honey Dew. **Pkt. 10c; Oz. 30c; 2 Oz. 50c; ¼ Lb. 90c; Lb. \$2.75**

Cassaba Melon

The Cassabas are primarily for winter use. They require a long season for maturing but the fruits are exceptionally good keepers. The skin of the fruits is usually furrowed and they possess little or none of the common musk melon odor.

Seed may be planted in April or May. Cultivate same as other musk melons but do not water too freely after first setting of fruit is fully grown. The fruits may be picked when the light streaks have become quite yellow. Store the fruits so they do not touch each other, in a cool dark place. When the rind becomes slightly softened and moist, they are ready to cut.

Golden Beauty One of the best cassabas. It is a variety grown extensively for shipment from Southern California. The fruits are nearly globular, bright yellow with golden tint, with wrinkled skin, six to eight inches in diameter. The flesh is white, very thick, juicy and sweet. **Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 60c; Lb. \$2.00**

WATER MELON

To make certain of raising good Watermelons, it is essential that the plants have a good start and to this end it is important to prepare hills about eight feet apart, by thoroughly working into the soil an abundance of well rotted manure—hen manure, guano, or other forms rich in nitrogen being most desirable. Over this highly manured soil put an inch or more of fresh earth and plant the seeds on this, covering them about an inch deep.

It is important that the seed should not be planted before the ground becomes warm and dry, as the young plants are very sensitive to cold and wet. Put ten or twelve seeds in a hill. When the plants have formed the first pair of rough leaves, they should be thinned so as to leave two or three of the strongest and best to each hill.

Frequent watering of the plants with liquid manure will hasten the growth, thus diminishing the danger from insect pests. If the striped beetle appears use tobacco dust freely. The best protection against blight and insect pests is to maintain a vigorous and continuous growth. It is desirable to change the location as often as practicable.

Harris' Earliest An extra early melon of excellent quality. The fruits are exceptionally large for so early a variety, slightly oval with irregularly mottled broad stripes of light and dark green. The flesh is bright red, sweet and tender. Seed black. The vines are vigorous and productive. One of the best varieties for northern latitudes. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 30c; Lb. \$1.00**

Ferry's Peerless Sometimes sold as Ice Cream. One of the best early sorts for the home garden and for market gardeners who deliver direct to consumers. The vines are moderately vigorous, hardy and productive. The fruits are very tender, medium sized, oval to medium long, bright green, finely veined with a darker shade. The rind is thin. The flesh is bright scarlet, solid, crisp and very sweet. Seed white. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 30c; Lb. \$1.00**

Long Light Icing Also known as Gray Monarch. The fruits are long and large, light green, slightly veined with a little darker shade. The flesh is deep, rich red, and of splendid quality. Seed white. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 30c; Lb. \$1.00**

Round Light Icing The fruits are small-medium, nearly round, greenish-white, slightly veined or dotted with light green. The flesh is bright, light red, very sweet and tender. Seed white. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 30c; Lb. \$1.00**

Monte Cristo or Kleckley's Sweets This most excellent variety is unsurpassed for home use or near markets. The vines are vigorous and productive. The fruits are medium to large, oblong, tapering slightly towards the stem end, dark green. The flesh is very bright, rich red, and is exceedingly sweet. The variety is so crisp and tender that it will not stand shipping, the fruit bursting open if subjected to even a slight jar, or when the rind is penetrated with a knife. Seed white. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25**

Florida Favorite A splendid melon of very large size and excellent quality. The fruits are long, dark green, with irregular mottled striping of a lighter shade. The rind is thin but firm. The flesh is very bright, deep red, very sweet and tender. The vines are vigorous and productive. Seed nearly white. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 30c; Lb. \$1.00**

Stone Mountain A very large, medium dark green, round melon of excellent quality. Flesh highly colored, very solid, with fewer seeds than most water melons. This is rapidly gaining a well deserved popularity in the South where the fruits frequently attain a weight of 60 to 80 pounds. The rind is tough enough to stand handling for nearby markets but will not stand long distance shipping. We have found this somewhat earlier than other large varieties. It produces an abundant crop in the South and can be grown successfully farther north than many of the long shaped varieties. (See further description page 7.) **Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 60c; Lb. \$2.00**

Irish Grey A comparatively new variety that is becoming very popular as a shipping sort. Fruits long oval in shape and of light yellowish grey color. The rind is exceptionally hard and firm. The flesh is bright red, sweet, firm but free from any hard centers or stringiness. A very desirable variety for those who prefer a long, light colored shipping melon. Seed white. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 30c; Lb. \$1.00**

Tom Watson A large, long melon similar in shape, color and splendid quality to Monte Cristo but averaging larger in size and with a tougher rind, making it especially adapted for shipping to distant markets. The vines are vigorous and productive. The flesh is rich red, sweet and tender. Seed white, more or less marked with brown. Wherever grown in the south it has become very popular as a shipping sort. There has been an increasing demand of late for a better quality of shipping melon and this demand has been

CHILIAN

met in a most exceptional degree by the Tom Watson. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 30c; Lb. \$1.00**

Klondike A melon of good size and shape with dark green skin. Fruits show a suggestion of ribbing but are smooth. The flesh is highly colored and of fine quality and flavor. The seeds are small, smooth and black. This melon has become very popular on the Pacific Coast on account of the attractive, bright red interior color, combined with high quality, and the thin but tough rind which stands shipping well. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25**

Chilian Black Seeded The quality of this melon is equalled by few varieties and surpassed by none for the home garden. It is desirable also for shipping. The fruits are medium sized, nearly round or slightly oblong. The skin is very deep green, indistinctly mottled and striped with a lighter shade. The flesh is decidedly bright vermilion-red, remarkably fine grained but firm and very sweet. Seed black. A melon of splendid quality, very popular on the Pacific coast and taking high rank elsewhere as it becomes more generally known. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25**

Sweet Heart This variety, introduced by us in 1894, is much used for shipping as well as for the home garden. The vines are vigorous and very productive, ripening their fruit evenly. The fruits are of largest size, oval but flattened at the ends and very heavy. The rind is very firm. The color is very light green, very slightly veined with a little darker shade. The flesh is bright red, firm but very sweet. The fruit remains in good condition a long time after ripening. Seed black. Our stock will be found very uniform in shape, size and color. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 30c; Lb. \$1.00**

Gypsy or Georgia Rattlesnake One of the largest and best known home garden and shipping sorts, especially adapted for the south. The fruits are very long, of a light green color, distinctly striped and blotched with a darker shade. The flesh is bright scarlet, tender and sweet when grown in the south, although usually the fruits are too late maturing to ripen properly in the north. Vines are large and vigorous. Seed nearly white. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 30c; Lb. \$1.00**

Citron The fruits are medium sized, uniformly round and are used exclusively for preserves or pickles. The color is dark green distinctly striped and marbled with light green. The flesh is white and solid but is not at all suitable for eating raw. Seed red. The fruits mature late in the fall and in this condition can be kept for a long time. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.50**

MUSHROOM

The Mushroom is an edible fungus of which there are numerous varieties. We handle the ordinary commercial variety of a creamy white color with loose gills which underneath are of pinkish-red, changing to liver color. The mushroom produces "seed" or spores and there is developed a white, fibrous substance in broken threads, called spawn, which is developed and preserved in horse manure, pressed in the form of bricks. Mushrooms can be grown in cellars, in sheds, in hotbeds or sometimes in the open air, the great essential being a uniform degree of temperature and moisture. Our space is too limited here to give the necessary cultural directions, but these are published in pamphlet form, a copy of which we will be pleased to send on request.

SPORE CULTURE MUSHROOM SPAWN. Produced from original spore cultures under the new French process which permits the indefinite reproduction of selected varieties. Positively the most vigorous and prolific spawn on the market. Our stock is of the white variety which is the sort generally preferred. Each brick is sufficient to spawn from 8 to 10 square feet of bed. Brick (about $1\frac{1}{4}$ lbs.), postpaid **45c**; **5 bricks, not prepaid, \$1.50.**

MUSTARD

Mustard is not only used as a condiment but the green leaves are used as a salad or cut and boiled like spinach. Sow as early in the spring as the ground will permit, in drills about eighteen inches apart, covering one-half inch deep. For succession, sow every few weeks till autumn. Water freely. In the south the seed may be sown in autumn and the plants used early in the spring as a salad and for greens.

White English The leaves are comparatively small and smooth, deeply cut or divided and of medium dark green color. The plant is upright, of rapid growth and soon bolts to seed. The leaves, when young, are mild and tender. Seed light yellow and larger than that of other varieties. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; $\frac{1}{4}$ Lb. 25c; Lb. 60c.**

Southern Giant Curled The leaves are large, light green with tinge of yellow, much crimped and frilled at edges. The plant is upright or slightly spreading in growth. This variety is highly esteemed in the south for the market as well as the home garden on account of its vigorous growth, hardness and good quality. Seed small, reddish brown to nearly black. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; $\frac{1}{4}$ Lb. 25c; Lb. 75c.**

MUSTARD, FLORIDA BROAD LEAF

Large Smooth Leaved An excellent sort with very large, light green, plain or comparatively smooth leaves, borne well above the ground. The plant is of very quick growth, fairly upright when young, becoming somewhat spreading at maturity. This sort is preferred by many as it is more easily prepared for the table than the rougher leaved varieties. Seed small, reddish brown to nearly black. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; $\frac{1}{4}$ Lb. 25c; Lb. 75c.**

Florida Broad Leaf Plants rather tall and upright growing and produce considerably more leaf growth than other varieties. The leaves are large, broad, comparatively smooth and have broad, distinct midrib. When cooked the leaves are of excellent quality. The variety is distinct in that it stays in condition without bolting to seed considerably longer than other sorts. Seed small, reddish brown to nearly black. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; $\frac{1}{4}$ Lb. 25c; Lb. 80c.**

NASTURTIUM

TALL MIXED GARDEN. Sometimes called Indian Cress. Grown not only for ornament but the beautiful orange and yellow flowers and the foliage are used for garnishing. The young leaves or shoots are excellent for salads. The green seed pods are greatly esteemed by many for use in mixed pickles. Early in spring sow, preferably in rather light soil, in rows three feet apart and two inches apart in the row, covering one inch deep. When the young plants are about four inches high thin to six inches apart in the row. Vines can be supported if so desired by stakes, strings or brush. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; $\frac{1}{4}$ Lb. 30c; Lb. \$1.00.** (For other varieties of *Nasturtium* see page 79.)

OKRA OR GUMBO

The young seed pods are used in soups, stews, catsups, etc. Highly esteemed in the south. After danger of frost is past, the ground being warm and in good condition, plant in rows about two and one-half feet apart, covering with about an inch of fine soil firmly pressed down. When about three inches high, thin to about one foot apart in the row. Cultivate and keep free from weeds. The pods are in best condition for use when from one to three inches long.

Dwarf Green Prolific An extra early maturing variety. Very productive. Plants are more dwarf in habit of growth than those of other varieties. Pods short, deep green, slightly corrugated, tender and of good quality. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; $\frac{1}{4}$ Lb. 25c; Lb. 75c.**

Dwarf Long Pod, Green This is a sturdy, dwarf growing variety, and is quite early and productive. The pods are long, fluted or corrugated, and are attractive dark green in color. They remain in condition for cooking until quite large. This variety is a very good one for the home garden and is of the type most used for canning. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; $\frac{1}{4}$ Lb. 30c; Lb. \$1.00.**

White Velvet The plants are about three and one-half feet high, early maturing and very productive. The pods are white, long, smooth and are tender until nearly full sized. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; $\frac{1}{4}$ Lb. 25c; Lb. 75c.**

Perkins' Mammoth Long Pod This variety is about three feet high, very early and productive. The pods are deep green, very long, slender, slightly corrugated, very tender and of good quality. This is a desirable market as well as home garden sort. **Pkt. 10c; Oz. 15c; $\frac{1}{4}$ Lb. 25c; Lb. 75c.**

ONION

Onion seed should always be raised from selected bulbs. It is only in this way that the most desirable types can be maintained. Unless the undesirable bulbs are rejected by the onion seed grower, the seed stocks will rapidly become unfit for use, as the bulbs will be uneven in shape and color and will lose their keeping quality. One of the most important operations at our Oakview Stock Seed Farm is the growing and selecting of onions for seed. Here the constant process of raising seed from selected bulbs only is carried on from year to year, thus enabling us to maintain stocks of such high quality that we challenge comparison with those offered elsewhere.

Although onions are often raised from sets and from division, by far the best and cheapest mode of production is from seed. The facility with which seed is sown and the superior bulbs it produces, recommend it for general use.

As early in spring as ground can be worked, sow in rich soil, thoroughly pulverized and leveled, in rows twelve to fifteen inches apart, covering one-half inch deep. When the plants are well up, cultivate and keep free from weeds. The young plants may be thinned about one inch apart in the row. When grown for bunching, the rows can be made as close as ten inches.

For very early crop in northern latitudes, sow seed in cold-frame in February and transplant when large enough to handle readily. The same location may be used for a succession of years if the ground is kept rich by applications of well rotted manure or other suitable fertilizer and is thoroughly worked at proper intervals. Where climate permits seed may be sown early in winter. If onions are to be grown for the market the following suggestions should be given careful consideration:

HOW TO RAISE ONIONS FOR THE MARKET

THE SOIL. We prefer a soft, dark sandy loam, not too fine. This is much better if it has been cultivated with hoed crops, kept clean from weeds and well manured for two years previous, because if a sufficient quantity of manure to raise an ordinary soil to a proper degree of fertility is applied at once, it is likely to make the onions soft. The same result will follow if we sow on rank mucky ground or on that which is too wet and it is impossible to raise either a large or profitable crop on stiff clay, very light sand or gravel.

PREPARATION. Onions respond well to very liberal manuring. As much as forty loads of stock manure well composted or one ton of high grade commercial fertilizer per acre may be applied to good advantage. The stock manure should be spread and worked into the top soil in the fall but if commercial fertilizer is used it should be distributed and thoroughly worked into the top soil after plowing in the spring. A liberal use of potash is very beneficial to the crop especially when raw manure is used or if the soil is rank and mucky, as potash reduces the tendency to scallions or coarse necked bulbs. The top soil should be cleared of everything that will interfere with the best possible work with drill and wheel hoe. The whole ploughed soil should be well pulverized and worked with tools that leave the surface smooth and compact.

SOWING THE SEED. This should be done as soon as the ground can be made ready and can be done best by a hand seed drill. This should be carefully adjusted to sow the desired quantity of seed about one-half inch deep. The quantity needed will vary with the soil, the seed used and the kind of onions desired. Thin seeding gives much larger onions than thick seeding. Four or five pounds per acre is the usual quantity needed to grow large onions. We prefer a drill that sows a very close row.

CULTIVATION. As soon as the young plants can be seen in the rows give a shallow working either with rake or some other tool that pulverizes well the whole top soil. Many onion growers consider about one inch apart as a perfect stand. Work the crop again in a few days with a hoe or tool that cuts the ground over, this time as closely as is possible to the row without injury to the young plants; follow as quickly as possible with a thorough hand weeding, keeping in mind that a very small weed today is a large one next week. At the same time that this hand weeding is done, it is advisable to clear the soil away from the base of the young plants, leaving them exposed to the sun. This will serve to prevent or check the damage often caused by root maggots. The ground should be cultivated once a week if possible and any remaining weeds pulled out by hand every two weeks. For best results these operations should be continued until the crop occupies the ground.

GATHERING. As soon as the tops die and fall the bulbs may be pulled and raked into small open windrows, turning every few days with a rake. At convenience cut off the tops half an inch to an inch from the bulbs and very soon afterward the bulbs may be picked up in crates and piled loose under cover. The large onion growers use a puller attachment to the wheel hoe that runs under the row of onions and lifts the bulbs. Where help can be procured readily we find it much cheaper to top the onions with a rough edged case knife and rake away the tops before pulling.

It will not do to store onions in large piles or masses, particularly in warm weather, or if they are the least moist, but if perfectly dry when gathered and stored in crates, they can be kept in fine condition till spring. The best way is to keep them dry, giving bottom ventilation if possible, and at a uniform temperature of about 32° to 34° Fr.

Extra Early Red Sometimes called Extra Early Flat Red. Although the first of the red sorts to ripen, the bulbs are firm and keep remarkably well for so early a variety. It is a very hardy, medium sized, flat variety that yields well and is very uniform in shape and size. The skin is uniformly rich purplish red and moderately strong flavored. It comes into use about a week or ten days earlier than Large Red Wethersfield. The flesh is white with tinge of light purple. The variety succeeds in cool soils. It is very desirable for early market use. Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 60c; Lb. \$2.00

Large Red Wethersfield

This is the standard red variety and a favorite onion in the east, where immense crops are grown for shipment. It is very extensively grown for home garden use as well as the market. The bulbs are large and are flattened, yet quite thick. The skin is deep purplish red. The flesh is light purplish white, moderately fine grained, rather strong but of pleasant flavor. The variety is very productive, one of the best keepers and very popular for general cultivation. This medium early or main crop variety does best on rich, moderately dry soil but on low muck land it is more apt to form large necks than the Danvers. There is no better sort for poor and dry soils. Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 60c; Lb. \$2.00

"Bagged" flower heads in stock seed crop of onion at Oakview. This method insures self pollination and eliminates possibility of crossing. Purebred strains require exacting care

ONION—Continued

WHITE PORTUGAL

and is excellent for shipping. We have by careful selection and breeding developed a strain which has the ripening habit and small neck of the original Danvers and yet is more globular, thus giving larger yields and handsomer bulbs without sacrificing any of the good qualities of the original Danvers. Pkt. 10c; Oz. 25c; 2 Oz. 40c; ¼ Lb. 75c; Lb. \$2.25

Michigan Yellow Globe The heaviest yield of onions is always obtained from rich, black lands. On such soils it is found that a globe shaped onion with a somewhat flattened base gives the largest returns and to meet the demands of the professional onion growers located on such lands, we have developed this variety. The bulbs are large, uniformly globe shaped, with small neck; shoulder usually slightly sloping, base often distinctly flattened, the largest diameter below the center of the bulb. The color is rich yellow with tinge of orange. The flesh is creamy white, mild and of very fine quality. This main crop sort ripens down evenly, keeps very well and is excellent for shipping. No onion grower can afford to plant inferior seed when such as this can be procured. Pkt. 10c; Oz. 25c; 2 Oz. 40c; ¼ Lb. 75c; Lb. \$2.25

Southport Yellow Globe This very hardy and exceedingly productive late or main crop variety is of the same general character as the Southport Red Globe, but the bulbs are rich yellow, average a little larger and are later maturing. The bulbs are globe-shaped with rather full shoulder, ripen down very evenly, keep well and are suitable for shipping. The flesh is creamy white, fine grained and of mild and excellent flavor. Pkt. 10c; Oz. 25c; 2 Oz. 40c; ¼ Lb. 75c; Lb. \$2.25

Mammoth Yellow Spanish or Prizetaker A very handsome late or main crop onion of the largest size and nearly globular in form, usually with shoulder and base slightly sloping. The skin is yellowish brown or light yellow with slight tinge of brown. The flesh is creamy white, very mild, tender and of excellent flavor. The variety keeps well if thoroughly ripened and is very desirable for shipping for fall and early winter use. If started very early in hotbed it will produce a mammoth onion the first season. Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 60c; Lb. \$2.00

White Portugal or American Silverskin This is a medium sized onion of mild flavor and with beautiful, clear white skin. The variety is a favorite with many for use when young as a salad or bunching onion and for pickles. It usually matures about ten days earlier than White Globe and is fine for fall and early winter use. It is an excellent medium early sort for gardeners who do not care to plant more than one variety. The bulbs are nearly round when of bunching size, somewhat flattened when mature. This is the best flattened white onion for northern latitudes. Pkt. 10c; Oz. 25c; 2 Oz. 40c; ¼ Lb. 75c; Lb. \$2.50

White Globe A most desirable medium early or main crop variety for the home garden. It is sometimes called Southport White Globe. The variety yields abundantly, producing medium to large, handsome and finely shaped, clear white bulbs. The flesh is firm, fine grained, quite mild in flavor and is more attractive than the colored sorts when cooked. The bulbs are globe-shaped, full at the shoulder, rounded at the base, keep well and are desirable for shipping. It is characteristic of the best stocks of White Globe to have many bulbs with a splash of magenta-red on the outside covering. We have by years of careful selection and breeding developed a strain which is unsurpassed in uniformity and beauty of shape and color. Pkt. 10c; Oz. 30c; 2 Oz. 55c; ¼ Lb. 90c; Lb. \$3.00

Southport Red Globe This most excellent medium early or main crop red variety produces bulbs of medium to large size, ideally globe shaped, with very smooth, glossy surface, very small neck and remarkably beautiful deep purplish red color. The flesh is white, tinged with light purple, mild, very fine grained and tender. The variety is extensively grown for home use as well as the market. It is one of the best keepers and is well adapted for shipping. Our splendid stock of this onion is the result of years of careful selection on our Oakview Stock Seed Farm and is unsurpassed by any. Pkt. 10c; Oz. 25c; 2 Oz. 40c; ¼ Lb. 75c; Lb. \$2.25

Large Yellow Dutch or Strasburg The bulbs are large and quite flat. The skin is light yellow or straw colored, and the flesh creamy white, mild and of excellent quality. This sort ripens down quickly and keeps well. It is extensively used for onion sets. Our stock of this early variety, compared with most on the market, is distinctly superior in size of bulb, uniformity of shape and evenness of color. Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 60c; Lb. \$2.00

Yellow Danvers A productive and very extensively used early or main crop variety of medium size. The skin is light coppery yellow in color. The flesh is creamy white, mild and of excellent flavor. The bulbs are flattened yet quite thick with small necks, ripen down quickly and very evenly and keep very well. This is still a standard, general crop, yellow onion for the home garden and market where a strictly globe shaped bulb is not demanded. Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 60c; Lb. \$2.00

Yellow Globe Danvers One of the most extensively used main crop yellow onions for the home garden and market. The bulbs are of medium to large size, uniformly globe shaped, with small neck, and ripen very evenly. The skin is rich coppery yellow. The flesh is creamy white, crisp and of mild and excellent flavor. The variety keeps very well

ONION—Continued

IMPORTED ONIONS

These sorts are particularly adapted to southern latitudes where they are sown in the fall or early spring. The best results are obtained by sowing in beds or boxes and transplanting.

Extra Early Barletta An extremely early maturing variety very white with silvery tinge and particularly desirable for pickling. The bulbs are very small and quite similar to Queen. If seed is sown out of doors in spring in the usual manner and plants thinned about two inches apart they will produce bulbs one to two inches in diameter. If these bulbs are set out the following spring, or if plants are grown under glass in winter and set out in the spring, they will produce large onions. This variety and Queen are the ones most generally used in this country for producing the small pickling bulbs. For this purpose if the seed has been sown eight to ten seeds to the inch of drill, no thinning will be required. Growers usually plant the seed thickly in drills fifteen inches apart and use forty to fifty pounds to an acre. **Pkt. 10c; Oz. 35c; 2 Oz. 60c; ¼ Lb. \$1.00; Lb. \$3.50**

Queen A very early, very white skinned variety of especial value for pickling. When allowed to reach full size the bulbs are quite flattened but as grown for pickles are nearly round. The large sized bulbs attain a size of about two inches in diameter. **Pkt. 10c; Oz. 35c; 2 Oz. 60c; ¼ Lb. \$1.00; Lb. \$3.50**

Early Neapolitan Marzajola An early and productive flat, white-skinned variety, desirable for early use and used for pickling. If seed is sown as soon as the ground can be worked it will mature a crop early in the season. In the south the seed can be sown in autumn and large onions produced in March. This variety is known also as Early May. **Pkt. 10c; Oz. 30c; 2 Oz. 55c; ¼ Lb. 90c; Lb. \$3.00**

Giant White Italian Tripoli A large, pure white, flat onion of mild and excellent flavor. This medium early and productive variety will produce a larger bulb from seed than White Portugal, but to attain full size the seed should be sown very early in a hotbed and the young plants set out in rich soil. When grown under proper conditions the bulbs are often three to four inches across, with pure white skin. **Pkt. 10c; Oz. 30c; 2 Oz. 55c; ¼ Lb. 90c; Lb. \$3.00**

Mammoth Silver King This variety produces a very large onion, resembling Giant White Italian Tripoli, but of larger size, slightly later maturing and rather a better keeper, making the sort more desirable for the fall market. It is a very productive flat variety with bulbs often four to five inches across, the largest of the white onions. The skin is silvery white. The flesh is white, very tender and mild flavored. **Pkt. 10c; Oz. 30c; 2 Oz. 55c; ¼ Lb. 90c; Lb. \$3.00**

WE DO NOT HANDLE ONION SETS

MAMMOTH SILVER KING

QUEEN

PARSNIP

PARSNIP, HOLLOW CROWN

The value of the Parsnip as a culinary vegetable is well known but it is not generally appreciated at its full value for stock feeding. On favorable soil it yields an immense crop of roots, more nutritious than turnips and very valuable for dairy stock.

Parsnips are usually grown on deep, rich, sandy soil, but will make good roots on any soil which is deep, mellow and moderately rich. Fresh manure is apt to make the roots coarse and ill shaped. As the seed is sometimes slow and uneven in growth, it should be sown as early as possible in drills two and one-half feet apart; cover one-half inch deep and press the soil firmly over the seed. Give frequent cultivation and thin the plants to six inches apart in the row.

Long White Dutch or Sugar This variety of parsnip is very hardy and will keep well through the winter without protection. The roots are long, white, smooth, tender and of most excellent flavor. Much used for the table and suitable also for stock feeding. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 30c; Lb. \$1.00**

Hollow Crown or Guernsey An excellent variety for the table. The roots are long, with smooth white skin, uniform in shape, tender and of the best quality. The variety is easily distinguished by the leaves growing from the depression on top or crown of the root. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 30c; Lb. \$1.00**

PARSLEY

This well known vegetable is very useful for flavoring soups and stews and for garnishing. The green leaves are used for flavoring or they may be dried crisp, rubbed to powder and kept in bottles until needed.

Parsley succeeds the best on rich, mellow soil. The seed is even slower than parsnip in germinating and should be sown as early as possible in the spring, in drills one to two feet apart covering not more than one-half inch with fine soil firmly pressed down. When the plants are well up thin eight to twelve inches apart in the row. When the plants of the curled varieties are about three inches high cut off all the leaves; the plant will then start a new growth of leaves which will be brighter and better curled and later, if these turn dull or brown they can be cut in the same way; every cutting will result in improvement.

PARSLEY, CHAMPION MOSS CURLED

Plain The leaves of this variety are flat, deeply cut but not curled. Very desirable for flavoring soups and stews and for drying. It is a favorite on account of its very dark green leaves as well as its hardness of plant. The curled sorts are more extensively used for garnishing. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.50**

Champion Moss Curled This is a vigorous, compact growing variety, excellent for garnishing and flavoring, and a handsome decorative plant. The leaves are very finely cut and so closely crisped or curled as to resemble bunches of moss. Owing to its uniformly fine deep green color and very attractive foliage, this is one of the most popular sorts for both the market and home garden. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.50**

Short Thick Rooted The root is the edible portion of this variety and resembles the round parsnip both in color and shape. The flesh is white, a little dry and in flavor is similar to celeriac. The foliage is practically the same as that of Plain Parsley. The roots can be dug late in the fall and stored in sand for winter use. They are extensively used for flavoring soups and stews. This variety is sometimes called Turnip Rooted. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.50**

PEAS

For early peas the soil should be light and warm, but for general crop a moderately heavy soil is better. Fresh manure and very rich or wet mucky soil should be avoided, as they cause a rank growth of vine at the cost of the quality of the peas, furthermore such soil is often the cause of early sorts maturing unevenly.

When practicable it is best to prepare the soil for peas the previous autumn in order to be able to plant as soon as the ground is dry enough in the spring. Peas may be planted out of doors as early as any of the garden vegetables. The earliest plantings are usually the most successful.

The time required to reach table condition is so evenly graduated among the varieties that by planting some of several varieties at the same time a very even succession can be obtained extending over a period of thirty days. Successive plantings of a desirable variety will also provide a succession but this cannot be extended over as long a period with as good results.

The seeds should be planted in rows at a depth of $1\frac{1}{2}$ to 2 inches. The rows should be 21 to 23 inches apart for dwarf varieties and about 28 to 42 inches apart for the taller sorts.

The wrinkled varieties are more sensitive to cold wet weather than the smooth seeded sorts but are of superior quality. All varieties growing more than one and one-half feet do better if staked up or brushed when four to six inches high. This support is usually given by sharpened branches of trees set between the double rows. The crop should be gathered as fast as it is fit for use. If even a few pods begin to ripen, not only will new pods cease to form, but those partly advanced will stop growing.

FIRST EARLY AND EARLY VARIETIES

Ferry's Extra Early Height 30 to 36 inches. Ready for table in 53 to 60 days. This is the earliest and most even strain of first early white peas, maturing so well together that sometimes a single picking will secure the entire crop. The vines are vigorous and hardy, bearing three to seven straight pods of good size, about two and one half to two and three-fourths inches long, each containing five to seven medium sized, smooth peas of fair quality. Seed small, smooth, yellowish white. The stock we offer is much superior to most on the market and more even than similar strains sold as Rural New Yorker and Improved Early Daniel O'Rourke. Pkt. 10c; Lb. 35c; 2 Lbs. 60c. postpaid; 100 Lbs. \$18.00

Alaska Height 32 to 38 inches. Ready for table in 53 to 60 days. By careful selection and growing we have developed a stock of this smooth blue pea of unequalled evenness in growth of vine and early maturity of pods, which are filled with medium sized, bright green peas of good flavor. The vines are of medium height and of distinctive light color. The pods are of good size, about two and one-half to two and three-fourths inches long. Seed small, smooth, and bluish green in color. This sort matures all of its crop at once and is an invaluable variety for market gardeners and canners. Pkt. 10c; Lb. 35c; 2 Lbs. 60c. postpaid; 100 Lbs. \$18.00

Thomas Laxton Height 36 to 42 inches. Ready for table in 55 to 60 days. This is a very early wrinkled variety of great merit. The vines are vigorous, similar to those of Gradus, but darker in color, hardier and more productive. The pods are large, often four inches long, with square ends similar to but larger, longer and darker than those of Champion of England and as uniformly well filled. The green peas are very large, of fine deep color and unsurpassed in quality. One of the very best sorts for the market and home garden. Pkt. 10c; Lb. 40c; 2 Lbs. 70c postpaid; 100 Lbs. \$22.00

Gradus Height 36 to 42 inches. Ready for table in 55 to 62 days. A very early, wrinkled pea. The vines are similar in appearance to Telephone but of medium height. The pods are very large, about four and one-fourth inches long, very nearly as large as those of Telephone, uniformly well shaped, pointed, handsome and more attractive than those of the first earlys. The peas are very large, of splendid quality and beautiful light green color which they retain after cooking. Practically the same as Prosperity. Pkt. 10c; Lb. 40c; 2 Lbs. 70c postpaid; 100 Lbs. \$22.00

American Wonder Height 12 to 15 inches. Ready for table in 57 to 62 days. The earliest of the dwarf wrinkled varieties. The vines produce a good crop of well filled pods of medium size; about two and five-eighths to two and three-fourths inches long, containing five to eight large peas which are exceedingly sweet, tender and well flavored. Seed medium sized, generally flattened, wrinkled and pale green. Pkt. 10c; Lb. 35c; 2 Lbs. 60c postpaid; 100 Lbs. \$20.00

Nott's Excelsior Height 12 to 15 inches. Ready for table in 57 to 62 days. The best very early, dwarf pea. It combines the good qualities of American Wonder and Premium Gem peas. The vines are larger and more productive than American Wonder and earlier than Premium Gem. The pods are medium sized, about two and three-fourths inches long. The peas, in sweetness and quality, are unsurpassed. Seed medium sized, wrinkled, green and somewhat flattened. A most desirable early sort for the market gardener and unsurpassed for the home garden. Pkt. 10c; Lb. 35c; 2 Lbs. 60c postpaid; 100 Lbs. \$20.00

UPPER PODS, THOMAS LAXTON—LOWER, GRADUS

Not less than 10 pounds at the 100 pound rate. One hundred pound prices do not include transportation; if ordered shipped prepaid add 3c per pound to the 100 pound price. We do not put up half pounds of peas.

PEAS—FIRST EARLY AND EARLY VARIETIES—Continued

Laxtonian Height 16 to 19 inches. Ready for table in 59 to 64 days. This handsome wrinkled pea is the largest podded of the dwarf varieties. The dark green pods are similar to Gradus in shape and splendid quality, are nearly as large in size and often mature a little earlier. Vines vigorous and productive, foliage dark green, pods about four inches in length. Seed light green, large, wrinkled, flattened, irregular in shape. Pkt. 10c; Lb. 40c; 2 Lbs. 70c postpaid; 100 Lbs. \$25.00

Premium Gem (Improved Little Gem) Height 18 to 20 inches. Ready for table in 60 to 65 days. A desirable early green wrinkled dwarf variety similar to but better than McLean's Little Gem. The vines are very productive. The pods are of medium size, about two and three-fourths inches long, crowded with six to eight large peas of fine quality. Seed green, large, wrinkled, often flattened. Pkt. 10c; Lb. 35c; 2 Lbs. 60c. postpaid; 100 Lbs. \$18.00

Little Marvel Height 18 to 20 inches. Ready for table in 63 to 68 days. An excellent dwarf sort for the market and home garden. The pods average a little longer than those of Premium Gem, are more attractive in shape and color and the peas are of superior quality. The vines are sturdy, and heavily set with straight, deep green pods, square ended at the bottom and nearly three inches in length. Seed large, green, wrinkled. Pkt. 10c; Lb. 40c; 2 Lbs. 70c; 100 Lbs. \$25.00

SECOND EARLY VARIETIES

McLean's Advancer Height 30 to 36 inches. Ready for table in 66 to 71 days. A green, wrinkled variety of medium height, with long pods, about two and three-fourths to three inches long, which are abundantly produced and well filled to the ends. This pea is used very extensively by market gardeners because of its productiveness and fine appearance of its pods, and is popular with consumers on account of its quality. It is also largely used by canners. Our strain of Advancer is sometimes sold as Perfection. Pkt. 10c; Lb. 35c; 2 Lbs. 60c. postpaid; 100 Lbs. \$18.00

Yorkshire Hero Height about 30 inches. Ready for table in 70 to 75 days. The vines are stout, bearing near the top a number of rather broad pods of medium size, about three inches long. The peas are of fine quality and will be preferred to any other by those who like a rich, marrow-like pea. Seed large, wrinkled and flattened. Pkt. 10c; Lb. 35c; 2 Lbs. 60c. postpaid; 100 Lbs. \$18.00

Bliss' Everbearing Height 30 to 36 inches. Ready for table in 70 to 75 days. The vines are stout, bearing at the top six to ten good sized pods, about two and one-half to three inches long. If these are picked as they mature and the season and soil are favorable, the plant will throw out branches bearing pods which will mature in succession, thus prolonging the season. The peas are large and wrinkled, tender, of superior flavor and preferred by many to any other sort. Pkt. 10c; Lb. 35c; 2 Lbs. 60c. postpaid; 100 Lbs. \$19.00

Green Admiral Height about 48 inches. Ready for table in 70 to 75 days. The vines of this exceptionally hardy, second early variety are tall and vigorous. The pods are usually borne in pairs, are curved, bright green, about two and three-quarters inches long, and are crowded with six to nine peas of good quality and deep green color. Seed wrinkled, of small-medium size, green with rich green cotyledons. Owing to its great vigor, heat resistance and productiveness, and the fine color and suitable size of the green peas, this variety is very well adapted for canners' use. Sold out.

Telephone Height 4 to 4½ feet. Ready for table in 73 to 75 days. This has become the leading pea with market gardeners whose trade appreciates fine appearance and high quality. The vines are tall and vigorous, with large, coarse, light colored leaves and producing an abundance of pointed pods of largest size, often four and one-half to five inches long, attractive bright green filled with very large peas which are tender, sweet and of excellent flavor. It comes into use soon before the early sorts are gone and is one of the best sorts for either home or market. Pkt. 10c; Lb. 35c; 2 Lbs. 60c postpaid; 100 Lbs. \$19.00

Admiral Beatty Height 4 to 4½ feet. Ready for table in 73 to 75 days. A very desirable midseason or early main crop, variety similar in many respects to Duke of Albany. Vines are dark green in color, and produce abundantly large pods well filled with eight to ten peas of excellent quality. The fine dark green color of the pods of this variety makes it exceptionally attractive, and its excellent quality is all that could be desired. Pkt. 10c; Lb. 35c; 2 Lbs. 60c postpaid; 100 Lbs. \$19.00

Alderman Height 4½ to 5 feet. Ready for table in 75 to 78 days. This is in many respects the very best early main crop variety of the valuable Telephone type. The vines are tall growing, dark green, vigorous and exceedingly productive. The pods are of largest size, often five to five and one-half inches long, dark green, similar to but a little larger and a shade darker in color than those of Duke of Albany and about the same in season. The peas are of largest size and unsurpassed in quality. Market gardeners are demanding the large podded, dark colored sorts which retain their fine appearance even after shipping a long distance. The Alderman answers these requirements and we recommend it unreservedly. Pkt. 10c; Lb. 35c; 2 Lbs. 60c postpaid; 100 Lbs. \$19.00

ALDERMAN

Not less than 10 pounds at the 100 pound rate. One hundred pound prices do not include transportation: if ordered shipped prepaid, add 8c per pound to the 100 pound price. We do not put up half pounds of peas.

A GROUP OF OUR REPRESENTATIVES INSPECTING THE LATER VARIETIES OF PEAS IN TRIAL AT OUR EXPERIMENTAL GARDEN

PEAS—LATER VARIETIES

Improved Stratagem Height 30 to 34 inches. Ready for table in 77 to 80 days. One of the best of the large podded, semi-dwarf main crop varieties. The vines are very sturdy, with medium dark green foliage. The pods are very large, often four and one-quarter to four and one-half inches long, pointed, dark green, and uniformly filled with very large, dark green peas of the finest quality. Pkt. 10c; Lb. 35c; 2 Lbs. 60c postpaid; 100 Lbs. \$19.00

Horsford's Market Garden Height 30 to 36 inches. Ready for table in 76 to 80 days. The vines of this variety are of medium height, hardy and very productive, giving the greatest number of pods of any on our list. The foliage is dark green and the leaves are small. The pods are of medium size, about two and three-fourths inches long, each containing five to seven medium sized, sweet, dark green peas which retain well their color and sweetness after canning. Seed wrinkled and of medium size. Pkt. 10c; Lb. 35c; 2 Lbs. 60c. postpaid; 100 Lbs. \$18.00

Melting Sugar Height 4 to 5 feet. Ready for table in 70 to 75 days. (Edible pods) We consider this the best of the edible-podded sorts, in which the pods are used when half grown and are cooked in the same way as snap beans. The pods of Melting Sugar are very large, four to four and one-half inches long, broad, often curved or twisted, and when young, stringless, very tender and finely flavored. The variety we offer, sometimes called Mammoth Melting Sugar, is rather late maturing, very prolific, strong growing, with large light colored foliage. Seed medium to large, smooth, round, light yellowish white in color. Pkt. 10c; Lb. 40c; 2 Lbs. 70c postpaid; 100 Lbs. \$25.00

Giant Butter, Edible Pod Height 4½ to 5 feet. Ready for table in 70 to 75 days. We consider this new and distinct edible podded sort a valuable acquisition. The pods, which are five to six inches long, are very fleshy, curved or scimitar shaped and of light green color. When young the pods are very tender and free from strings and when cooked are of superior quality and delicious flavor. Pkts. only 10c

Champion of England Height 4½ to 5 feet. Ready for table in 78 to 80 days. A standard, very productive, main crop variety, universally admitted to be one of the richest and best flavored of the late peas. The pods are large, about three inches long. The seed is light green and wrinkled. We consider this variety one of the best of its season, either for the home garden or for market gardening use. Pkt. 10c; Lb. 35c; 2 Lbs. 60c. postpaid; 100 Lbs. \$19.00

Large White Marrowfat Height 4½ to 5 feet. Ready for table in 80 to 85 days. The vines of this tall variety are of strong growth. The pods are large, about three inches long, cylindrical, surface somewhat roughened, light colored and well filled. Seed large, smooth, round and light creamy yellow. It is desirable for summer use but is not as sweet and tender as most sorts, although undoubtedly one of the most productive of the garden varieties. Pkt. 10c; Lb. 30c; 2 Lbs. 50c. postpaid; 100 Lbs. \$16.00

Large Blackeye Marrowfat Height 4½ to 5 feet. Ready for table in 80 to 85 days. A well known tall, late maturing variety. It is a very prolific bearer of large pods, about three inches long. Seed large, smooth, round, light creamy yellow with black eye. One of the best of the Marrowfat sorts. Pkt. 10c; Lb. 30c; 2 Lbs. 50c. postpaid; 100 Lbs. \$16.00

GIANT BUTTER, EDIBLE POD

Not less than 10 pounds at the 100 pound rate. One hundred pound prices do not include transportation: if ordered shipped prepaid add 8c per pound to the 100 pound price. We do not put up half pounds of peas.

PEPPER

Peppers are most largely used for seasoning meat and vegetable dishes as well as for salads and mangoes. They are used also for making chow chow and chili sauce.

The culture is the same as for egg plant and the plants need quite as much heat to perfect them. Sow seed early in hotbed, or about middle of spring in open seed bed, the soil being light and warm. When three inches high transplant in rows about two and one-half feet apart and two feet apart in the row. Cultivate and keep free from weeds. Guano, hen dung, or any other bird manure hoed into the surface soil when the plants are about six inches high, will undoubtedly increase the product.

PUNGENT OR "HOT" VARIETIES

Red Cherry A second early sort. The plants are tall, bearing a profusion of round, bright red fruits, about two-thirds of an inch in diameter, which are very pungent when ripe. Pkt. 10c; Oz. 50c; 2 Oz. 85c; ¼ Lb. \$1.40; Lb. \$5.00

Red Chili A late variety. The pods are bright, rich red, about two inches long, one-third to one-half inch in diameter at the base, tapering to a sharp point and exceedingly pungent when ripe. Pkt. 10c; Oz. 50c; 2 Oz. 85c; ¼ Lb. \$1.40; Lb. \$5.00

Tabasco A small fruited sort, used very extensively in the preparation of tabasco sauce. About one and one-half inches long, bright scarlet in color and extremely pungent. Requires a long season to mature and is not recommended for planting north of Ohio. Plants two and a half to three feet high. Pkt. 10c; Oz. 50c; 2 Oz. 85c; ¼ Lb. \$1.40; Lb. \$5.00

Long Red Cayenne A well known medium early variety having a slender, twisted and pointed pod about four inches long. The color is deep green when fruit is young, bright red when ripe. The flesh is extremely strong and pungent. Pkt. 10c; Oz. 45c; 2 Oz. 80c; ¼ Lb. \$1.25; Lb. \$4.75

Hungarian Yellow Wax A comparatively new variety of hot pepper which is extensively used in some localities for pickling. The fruits are six to seven inches long, between one and one and a half inches wide at stem end, tapering to a sharp point which is usually hooked. They are light greenish yellow in color until ripe when they turn to bright cherry red. The plants are vigorous, of medium height and very productive. (See further description on page 5.) Pkt. 10c; Oz. 80c; 2 Oz. \$1.30; ¼ Lb. \$2.25

NON-PUNGENT OR "SWEET" VARIETIES

Bell or Bull Nose Our strain of this variety is the earliest of the larger fruited peppers. The plants are not as tall growing as the later varieties but are vigorous, sturdy, and surprisingly productive, ripening their crop uniformly and early. The fruits are of medium size, square shaped, and when immature, they are deep green in color, turning to bright scarlet red when ripe. The flesh is thick but is not entirely free from pungency, being quite mild excepting in the cell partitions which are strong and pungent. For uniformity in plant, size and earliness of fruits, there is no better stock to be had than that which we offer. Pkt. 10c; Oz. 50c; 2 Oz. 85c; ¼ Lb. \$1.40; Lb. \$5.00

Harris' Early Giant A new large fruited, early sweet pepper of good quality and high productiveness. The plants are of medium height, of vigorous bushy growth, and bear from five to ten fruits nearly as large as Giant Crimson which they closely resemble in shape. The flesh is of medium thickness, mild, and of good quality. This is much the largest of any of the early varieties of sweet pepper. It is a good home garden variety and especially desirable for market growers. (See illustration and further description on page 5.) Pkt. 10c; Oz. 65c; 2 Oz. \$1.15; ¼ Lb. \$2.00

Royal King A comparatively new variety of sweet pepper. Plants two to two and one-half feet high, vigorous and productive, ripening large attractive fruits early in the season. Fruits deep green when young, bright scarlet red when ripe. Flesh very thick, mild and fine flavored. An excellent sort for use in salads or for stuffed peppers or mangoes. Pkt. 10c; Oz. 50c; 2 Oz. 85c; ¼ Lb. \$1.40; Lb. \$5.00

Ruby King An improved American variety, very large and attractive. The plants are about two and one-half feet high, vigorous, compact and productive. The fruits are often four to four and one-half inches long and of deep green color when young, bright red when ripe. The flesh is thick and mild flavored. One of the best varieties for mangoes or stuffed peppers. Pkt. 10c; Oz. 50c; 2 Oz. 85c; ¼ Lb. \$1.40; Lb. \$5.00

Pimiento The fruits of this very productive sort are exceptionally smooth and glossy, of good size, medium length and attractive color. The flesh is very thick and solid, mild and of very fine flavor. Desirable not only for salads and stuffed peppers but it is also the sort used largely by canners. The plants are vigorous and upright, about two to two and one-half feet high, with short, broad, dark green leaves. The fruits are deep green when young, becoming deep red as they mature. Pkt. 10c; Oz. 40c; 2 Oz. 75c; ¼ Lb. \$1.10; Lb. \$4.00

California Wonder We regard this as the most valuable addition to the pepper list since that useful vegetable came into general use. Fruits dark green, smooth in surface, square in cross-section and very large, usually about four inches across and four and a half to five inches in length.

CALIFORNIA WONDER

In addition to the striking outward appearance, it has the thickest flesh of any pepper in cultivation. The flesh is usually one-fourth inch thick and a thickness of three-eighths inch is common.

It is about in season with other large fruited sorts but produces marketable sized green peppers nearly as early as the earliest varieties. This will be found a very desirable sort for the home garden and an exceptionally profitable one for commercial growers, especially those who ship to distant markets. (See further description on page 5.) Pkt. 10c; Oz. 85c; 2 Oz. \$1.35; ¼ Lb. \$2.25; Lb. \$8.00

Giant Crimson The fruits of this very desirable sort are of the largest size, ripen earlier than any of the other very large sorts and average heavier, as the flesh is exceptionally thick. The plants are vigorous and upright, about two and one-half to three feet high. The color is deep green when fruit is young, deep crimson when matured. The flavor is mild. One of the very best sorts for salads and large mangoes. Pkt. 10c; Oz. 60c; 2 Oz. \$1.00; ¼ Lb. \$1.75; Lb. \$6.00

Chinese Giant Fruits similar to those of Giant Crimson but average larger and are much broader in proportion to their length. The flesh is thick, mild and sweet, and is exceptionally desirable for use in salads; also one of the best varieties for stuffing. Fruits are rich deep green when immature and bright scarlet red when ripe. Plants about two feet high, vigorous and very productive. Pkt. 10c; Oz. 60c; 2 Oz. \$1.00; ¼ Lb. \$1.75; Lb. \$6.00

Sweet Spanish A late maturing and attractive, red, sweet pepper. The plants are about two and one-half feet high, upright, very compact, vigorous and productive. The fruits are very large and long, frequently seven inches in length and about two inches in diameter, with very thick, mild flesh of excellent quality. The color is deep green when fruit is young, rich red when ripe. Pkt. 10c; Oz. 55c; 2 Oz. \$1.00; ¼ Lb. \$1.60; Lb. \$5.50

PUMPKIN

There has been so much confusion in the use of the terms "pumpkin" and "squash" that we are prompted to do what we can to bring about a more accurate use of these terms. Pumpkins and squashes are both Cucurbits; the different varieties being classified under three species, namely: *Cucurbita maxima*, *Cucurbita moschata* and *Cucurbita pepo*. True squashes belong to the species *Cucurbita maxima*. The pumpkins are divided under the two species: *Cucurbita moschata* and *Cucurbita pepo*. Generally the varieties of true squash have been recognized and listed as such but some varieties of pumpkin have been listed as winter squash and others have been included under the heading of summer varieties of squash. Then too the two species of pumpkin have been confused and certain of the varieties of *Cucurbita pepo* have been listed in the same classification with *Cucurbita moschata*.

In regard to the matter of crossing or mixing when planted in adjacent or nearby areas, it is well to bear the following points in mind:

Any variety of a given species will cross with another variety of the same species.

There is likelihood of any variety of *Cucurbita moschata* (pumpkin) crossing with either *Cucurbita maxima* (squash) or *Cucurbita pepo* (pumpkin). There is little or no probability of *Cucurbita maxima* (squash) crossing with *Cucurbita pepo* (pumpkin).

We present herewith a revised list of varieties in their proper classification.

Pumpkin—*Cucurbita Moschata*

This species includes only two varieties in general cultivation. These are chiefly useful for stock feeding but both are desirable for culinary purposes and the Sweet Cheese is extensively used for canning.

Green Striped Cushaw Fruits very large, with crooked neck. Color creamy white, irregularly striped or traced with green. Flesh light yellow, very thick, rather coarse but sweet. This sort is very productive and popular in some sections. Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.50

Sweet Cheese Very popular in the south, but not as well adapted to northern latitudes. The fruits are flattened, the diameter usually about twice the length. The skin is mottled light green and yellow, changing to creamy yellow when mature. The flesh is yellow, tender and of excellent quality. Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 25c; Lb. 75c

Pumpkin—*Cucurbita Pepo*

This species includes the well known field and pie varieties of pumpkin as well as all those formerly listed as "Summer Varieties" of squash, also the Table Queen or Des Moines which has heretofore been listed with the "Winter Varieties" of squash.

Long Island White Bush This is the earliest of the summer varieties. The vines are vigorous and very productive. The fruits are rather small and often early spherical, thick, with only a slight indication of a scallop. The skin is white, flesh tender and of good quality. Our stock of this variety is very uniform. Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25

Early White Bush Scallop This is the well known, very early, somewhat flattened scalloped bush variety of medium size. The color is creamy white with comparatively smooth surface. The vines are vigorous and very productive. This variety is also known as Patty Pan or Cymling. Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25

Mammoth White Bush Scallop An early maturing, somewhat flattened, scalloped bush sort of largest size and the handsomest of the summer varieties for home garden and market. The fruits are uniformly warted and a beautiful, clear waxy white. The stock we offer of this variety is very superior. Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.50

Early Yellow Bush Scallop A flattened, scalloped bush variety of largest size and of very good flavor. The skin is deep orange. The flesh is pale yellow and we have developed a strain of the old Yellow Bush Scallop which is fully as productive but uniformly larger and flatter than the old stock and has a very small seed cavity. This sort is extensively used for the home garden and market where a very large yellow scalloped sort is wanted. Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25

Summer Crookneck The well known standard sort, early and very productive. It matures the bulk of its crop a little earlier than the Mammoth Summer Crookneck. The fruits when fully grown are about one foot long, with uniformly crooked neck and surface densely warted. The color is bright yellow. The shell is very hard when the fruit is ripe. Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25

Mammoth Summer Crookneck The largest and one of the earliest of the crookneck varieties. The vines are of bush habit, larger and more vigorous than Summer Crookneck. The fruits when mature are very large, often one and one-half to two feet long, with exceedingly warted surface. The color is deep yellow. Its large size and attractive color make this variety a favorite with market gardeners as well as for home garden use. Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.50

Italian Vegetable Marrow (*Cocozella di Napoli*) The vines are of bush habit and produce large, much elongated fruits, dark green at first, but as they mature becoming marbled with yellow and lighter green in stripes. The fruits are in best condition for the table when six to eight inches long but can be used when somewhat larger. The young fruits when sliced and fried in oil constitute a vegetable delicacy that is very tender and marrowy. Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 60c; Lb. \$2.00

English Vegetable Marrow Long white trailing. Fruits light creamy yellow. Vines trailing, vigorous and productive. A desirable variety of good quality. Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 60c; Lb. \$2.00

Table Queen or Des Moines A small, dark green, acornshaped, sharply ribbed variety which matures nearly as early as the summer squashes. Fruits just the right size to serve in halves in eastern markets and it will be found a profitable sort for the commercial grower as well as a fine early squash for home gardens. Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 55c; Lb. \$1.75

Pie or Winter Luxury The fruits are of medium size and nearly round. The skin is light yellow, smooth and is covered with a fine gray netting. The flesh is light yellow, very thick, sweet and finely flavored. This variety makes very delicious pies. Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25

Sugar or New England Pie This variety is small, but of most excellent quality for pies. The fruits are deep orange, eight to ten inches in diameter, round or somewhat flattened and slightly ribbed. The flesh is rich deep yellow, fine grained and very sweet. Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25

Large Yellow The pumpkin most extensively used for feeding stock; also used for making pies. It grows to a large size and varies in shape from nearly round or slightly flattened to quite long. Flesh deep, rich yellow, fine grained and highly flavored. This variety is often planted with corn. It is known also as Field Pumpkin. Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 30c; Lb. \$1.00

MAMMOTH SUMMER CROCKNECK

RADISH

For forcing sow in hotbed or under glass in rich, sandy soil made perfectly level. Scatter evenly over the surface from fifty to one hundred seeds to the square foot and cover with one-half inch of soil sifted on. Careful watering to keep soil moist, even, moderate temperature and good ventilation are required for rapid and best root development. If the bed is a good one the whole crop can be marketed in twenty-one to forty days after planting.

For open ground culture sow in rich, sandy soil as soon in the spring as it is fit to work, in drills twelve to eighteen inches apart and thin out the plants to prevent crowding. A good dressing of nitrate of soda will greatly stimulate growth and insure tender, brittle roots. Successional sowings from one week to ten days apart will keep up a supply. After the hot weather of summer begins, it is better to sow the summer and winter varieties as they do not become tough and stringy nor pithy so quickly as the early sorts.

Radishes are subject to root maggots which make them useless for culinary purposes. We know of no certain remedy for this pest. We have found that the best preventive measures are to avoid the use of rank manure and not to sow on ground where radishes, turnips or cabbages were grown the year previous. We have been very careful to secure the very best seed possible and there is none sold under other names which is better than that of the varieties we offer. What is often called "scarlet" in radishes is more or less of a rosy carmine color. Our "deep scarlet" is of a much deeper red.

Early Deep Scarlet Turnip This is an excellent extra early forcing radish. The roots are small, nearly round and of bright scarlet color. The tops are very small. The flesh is white, crisp and well flavored. One of the handsomest of the forcing varieties. Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25

Blood Red Turnip Forcing The smallest reliable forcing radish. The tops are distinctly small. The roots are round or slightly flattened, very deep red in color and of the best quality. It remains in condition for use the longest of any of the first early forcing sorts and is a favorite where a very small, deep red radish is desired. Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25

Early Scarlet Globe The roots of this variety are slightly olive shaped and are a rich, bright scarlet in color. The flesh is white and tender. The roots are fit to pull as early as Non Plus Ultra but are larger when matured. We specially recommend this to gardeners as a large, first early forcing radish. It is also desirable for first early planting outdoors for the home garden and market. Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25

Early Deep Scarlet, Olive Shaped An excellent deep carmine-red olive shaped forcing sort, typical in its very small tops and early maturing roots, which should be pulled just as soon as in condition. The roots when fully grown are about one and one-half inches long by about one inch in diameter. The variety is suitable also for early outdoor planting. Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25

Early White Turnip This is an early white radish, a little more flattened than Early Scarlet Turnip, and as offered by us, of smaller size and sometimes a little earlier maturing. While used mostly for early outdoor planting, its very small tops and quick growth make it suitable for forcing. The roots are about one inch in diameter when mature. The flesh is pure white, crisp and tender. Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25

Early Scarlet Turnip A round, red, turnip shaped radish with small tops and of very quick growth, deserving general cultivation on account of its rich, scarlet-red color, almost crimson and its white, crisp and tender flesh. The roots often grow one inch long by one and one-eighth inches in diameter before becoming pithy. This is a standard variety for early outdoor planting for the home garden and market. Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25

Early Scarlet Turnip, White Tipped One of the best early radishes for the home garden and a great favorite in large markets for early planting outdoors. It is but little later than Early Scarlet Globe and will give entire satisfaction where extreme earliness and small tops are not the chief considerations. The roots are nearly round, slightly flattened on the underside. The color is very bright, deep rose-carmine scarlet with a distinctly white tip. The flesh is white and of the best quality. The stock we offer is exceptionally attractive in its splendid coloring. The scarlet is unusually deep and affords a distinct contrast with the large, clear white tip. Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25

French Breakfast A quick growing, small, olive shaped radish about one and one-half inches long by five-eighths to three-fourths of an inch in diameter when fully grown. The color is beautiful deep rose-scarlet except a little clear white about the tip. This is an excellent variety for planting outdoors for the home garden. Its small tops and earliness make it also desirable for growing under glass. Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25

Crimson Giant Turnip A round radish of exceptionally large size for so early a variety. The roots are nearly globe-shaped, of beautiful crimson-carmine color and most excellent quality, often growing one and three-fourths inches in diameter before becoming pithy. It is a desirable variety for general outdoor planting, and also suitable for forcing where a very large, round radish is wanted. It remains in condition a remarkably long time for so early a radish. Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25

EARLY SCARLET GLOBE

RADISH—Continued

Icicle A very attractive, pure white radish, the earliest of the long, white summer sorts and of most excellent quality. The roots are somewhat shorter, with smaller tops than Long White Vienna and mature a little earlier. The roots when mature are five to six inches long by about one-half to five-eighths of an inch in diameter. One of the most desirable varieties for outdoor summer planting for the home garden and market. It is also adapted for forcing. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25**

Half Long Deep Scarlet The roots of this desirable early variety are of a deep, rich red color and are olive shaped or half long with a somewhat tapering point. The tops are comparatively small. The flesh is very white, crisp and tender, and does not become pithy as soon as most other early sorts. The roots when mature are about two and one-half to three inches long. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25**

Long Brightest Scarlet, White Tipped One of the brightest and handsomest scarlet radishes. It is an improvement in earliness and color over other varieties of this class. The roots are fit for use in about twenty-five days and continue in good condition until fully grown when they are as large in diameter but a little shorter than Early Long Scarlet. The variety has small tops and can be used for forcing as well as for the open ground. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25**

Long Scarlet This is a standard, most excellent sort either for the home garden or the market. The tops are short and comparatively small. The roots are smooth, slender, uniform in shape and a very attractive bright carmine-red in color. They grow about one-fourth to one-third out of the ground and continue crisp and tender until fully matured, when they are about six inches long. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25**

Wood's Early Frame This is not only a very good variety for forcing, being shorter and thicker than the old Long Scarlet Short Top, but is one of the very best sorts for first crop out of doors. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25**

Cincinnati Market A desirable market variety with roots similar to Early Long Scarlet, Short Top, Improved, but averaging longer, deeper red in color and remaining a little longer in condition for use. The roots are slender and before becoming pithy are often six to seven inches long by about five-eighths of an inch in diameter at the shoulder. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25**

Improved Chartier One of the best long radishes for planting outdoors for early summer use in the home garden, and used also for the market. The tops are of medium size. The roots are in good condition for the table when half an inch thick and continue hard and crisp until they reach a diameter of about one and one-fourth inches, thus affording good roots for a long time. The roots are rather long, averaging seven to eight inches when mature, bright scarlet-rose in color, shading into white at the tip. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25**

Early Golden Yellow Oval This sort matures quickly, has small tops and resists the summer heat better than the early scarlet or white kinds. The roots are oval, tapering at the base, and are about one and one-half inches long by about one inch in diameter when mature. The color is bright light yellow, often russeted. The flesh is white, slightly pungent, crisp and tender. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.40**

ICICLE

Long White Vienna An early maturing and attractive, long, white, summer radish of most excellent quality. The tops are of medium size. The roots are clear white, slender, smooth and average when mature six to seven inches long by about five-eighths to seven-eighths of an inch in diameter at thickest part. The flesh is very crisp and tender. The variety is desirable for market and home garden use. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25**

Golden Globe This variety is of quick growth, affording crisp and tender radishes even in a very hot climate and is extensively grown in the south. The roots are uniformly globe-shaped, with skin of golden yellow color. They are about two inches long by two and one-fourth inches in diameter when mature. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.40**

Large White Summer Turnip A desirable large turnip shaped summer variety. The roots are round, smooth, white and attractive and are two to three inches in diameter when mature. The flesh is crisp, firm and rather pungent. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.40**

White Strasburg Even when comparatively small this variety is in good condition for use and continues crisp until matured when the roots are four to six inches long by one and one-half to two inches in diameter. The roots are rather thick at the shoulder and are usually somewhat tapering. They remain in condition for use much longer than the early varieties. This is one of the best large, white later summer sorts for home garden and market. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25**

Early White Giant Summer The roots are large, often four inches in diameter, white and are usually top shaped. The flesh is white and crisp, and keeps remarkably well, so that those not used in the summer or fall can be stored for early winter use. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.40**

LONG SCARLET

RADISH—Continued

WINTER VARIETIES

Seed for winter radishes should be sown about the first of August in rich, warm, sandy loam, in rows about twenty inches apart, covering half an inch deep. When well up thin to three inches apart in the row and give frequent cultivation. For winter use, the roots should be pulled and packed in damp sand and stored in a cool cellar.

Scarlet China This is an extensively grown variety for fall and winter use. It is known also as Chinese Rose. The roots are cylindrical, or largest near the bottom, stump rooted or blunt at both ends. The skin is smooth and of a bright deep rose color. The flesh is white, firm, crisp and pungent. The tops are moderately large with leaves distinctly cut and divided; leaf-stems tinged with rose. The roots are usually four to five inches long by about one and one-half to two inches in diameter when fully mature, sometimes growing considerably thicker. It is a desirable late maturing garden sort. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25**

Celestial This excellent variety is sold also as Chinese White Winter. The roots are long, cylindrical, with beautiful white skin and flesh, the whitest and usually the least pungent of the winter varieties. When fully mature the roots are six to nine inches long by about two and one-half to three and one-half inches in diameter. Blunt or stump-rooted with comparatively small tap-root. The flesh is compact and crisp. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.50**

California Mammoth White China The roots of this very large white winter sort grow nine to twelve inches long, by three to four inches or more in diameter just below the shoulder, tapering regularly to the tip. The flesh is very crisp and solid, decidedly pungent but well flavored, keeping well through the winter. The variety matures later than Celestial and the roots are not as mild but they attain a larger size under favorable conditions. For table use they are pulled before fully grown. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.50**

HALF LONG BLACK WINTER

Round Black Spanish The roots are round, sometimes slightly top shaped, three or four inches in diameter. The skin is almost black. The flesh is white, very compact, decidedly pungent, but well flavored. The variety keeps well through the winter. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.50**

Half Long Black Winter This variety is intermediate in shape between the Round and the Long Black Spanish, and seems to combine the good qualities of both. The roots have grayish black skin and crisp, pungent but well flavored white flesh. They are four to five inches long and one and one-half to two inches in diameter, sometimes approaching stump rooted form at maturity. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.50**

Long Black Spanish One of the latest and hardiest long garden radishes, especially adapted for winter use. The roots are long, thick, almost black, somewhat wrinkled. The flesh is white, of firm texture, decidedly pungent but well flavored. The roots when mature are usually seven to nine inches long by two to three inches in diameter at thickest part. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25**

CELESTIAL

RHUBARB or Pie Plant

Rhubarb, also known as Pie Plant, or Wine Plant, is the earliest spring vegetable and is grown for its leaf stalks which are extensively used for pies and sauce.

Rhubarb succeeds best in deep, somewhat retentive soil and the richer this is and the deeper it is stirred, the better. Sow in drills an inch deep and thin out the plants to six inches apart. In the fall transplant into very highly manured and deeply stirred soil, setting them four to six feet apart each way and give a dressing of coarse manure every spring. The stalks should not be plucked until the second year. When a blossom stalk appears, it should be cut back well into the ground and the plant never allowed to exhaust itself by running to seed. Our seed is saved from selected plants of the Linnaeus, Victoria, Giant and other improved sorts, but like the seeds of fruit trees, rhubarb seed cannot be relied upon to reproduce the same varieties.

SEED—Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.50

ROOTS—by mail, prepaid, 20c each; by express or parcel post, not prepaid, \$1.00 per ten.

ROQUETTE A hardy annual, the leaves of which are long, smooth and glossy and when young are used like mustard for salads. When in condition for use the plants are from eight to ten inches high. Sow the seed in shallow drills about sixteen inches apart, in early spring and for succession every few weeks thereafter. Water freely. The young leaves will be ready for cutting in about six weeks from time of planting. **Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 60c; Lb. \$2.00**

SALSIFY or Vegetable Oyster

One of the most desirable winter vegetables. The roots when cooked are very palatable and nutritious and are served in a variety of ways. The flavor is similar to oysters. Salsify succeeds best in a light, well enriched soil, which should be stirred to a good depth. Coarse and fresh manure should be avoided, as it will surely cause the roots to grow uneven and ill-shaped. Sow early and quite deep, giving the general culture recommended for parsnip. The roots are perfectly hardy and may remain out all winter, but should be dug early in spring, as they deteriorate rapidly after growth commences. Frost does not injure the roots, but before the ground freezes a quantity for winter use may be stored in a pit or in a very cool cellar.

Mammoth Sandwich Island This variety is large and strong growing with long, smooth, white, tapering roots, and is less liable to branch than the other sorts. The tops are grassy. It is invaluable for market gardeners' use. **Pkt. 10c; Oz. 25c; 2 Oz. 40c; ¼ Lb. 75c; Lb. \$2.50**

SORREL The improved varieties of Sorrel when well grown and cooked like spinach make a palatable dish. Sow in drills early in spring and thin the seedlings to six or eight inches apart in the row. One may commence cutting in about two months and the plants will continue in full bearing from three to four years.

Large Leaved French The best garden variety, having large, pale green leaves of fine quality. **Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 60c; Lb. \$2.00**

SPINACH

No plant makes more palatable and nutritious greens than spinach when properly prepared. Seed should be planted in very rich ground, the richer the better. Sow in drills sixteen to twenty inches apart and thin to about six inches apart when the leaves are an inch wide. All should be cut before hot weather, while young and tender. For early spring use sow early in autumn and protect the plants with a light covering of leaves or straw, or plant as soon as the land can be worked in the spring. Under favorable conditions the leaves may be large enough for eating in eight weeks. South of Cincinnati spinach can be grown through the winter with very little or no covering.

Savoy Leaved This sort is known also as Bloomsdale and as Norfolk Savoy Leaved. It is a very early variety and one of the best to plant in autumn for early spring use. The plant is of upright growth, with thick, glossy, dark green leaves of medium size, pointed but quite broad, and crumpled or blistered like those of Savoy cabbage. It is hardy and grows rapidly to a suitable size for use, but runs to seed quickly in warm weather. Seed round. This spinach is suitable for the home garden and is much used by southern truckers. **Postpaid, Pkt. 10c; 2 Oz. 15c; ¼ Lb. 20c; Lb. 50c. At purchaser's expense for transportation, 10 Lbs. \$3.50; 25 Lbs. \$8.00**

Long Standing Bloomsdale This differs slightly from the older strains of Savoy Leaved, in being thicker and rounder in leaf and a little lighter in color. It comes into use about a week later than other strains of Savoy Leaved, but it seems to stand unfavorable weather conditions without bolting to seed nearly as well as King of Denmark. Its long standing quality makes it a valuable addition to the spinach list. (See illustration and further description on page 3.) **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 25c; Lb. 60c. At purchaser's expense for transportation, 10 Lbs. \$4.50; 25 Lbs. \$10.00**

LONG STANDING BLOOMSDALE

Broad Flanders An early and vigorous growing round seeded variety. The leaves are bright green, broad and thick with long petiole, usually broad arrow-shaped but sometimes rounded. The surface is fairly smooth or sometimes slightly crumpled. It is a most desirable bunching sort for market gardeners. **Postpaid, Pkt. 10c; 2 Oz. 15c; ¼ Lb. 20c; Lb. 50c. At purchaser's expense for transportation, 10 Lbs. \$3.50; 25 Lbs. \$8.00**

Giant Thick Leaved (*Nobel*) A rapid growing variety producing early in the season a mass of rather smooth, thick, rounded leaves of very large size. It stands well without bolting, yields a greater bulk than other varieties and is highly recommended for both the home and market garden. Because of the greater tonnage produced and the smoothness of the leaves which makes washing easy, this variety is also unequaled for canning. (See further description on page 3.) Seed round. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 25c; Lb. 60c. At purchaser's expense for transportation, 10 Lbs. \$4.50; 25 Lbs. \$10.00**

Juliana A new variety resembling Victoria in form of leaf and habit of plant but larger and somewhat rounder leaved. By removing the early bolting male plants, the originators of this variety have produced a spinach that is ready for use soon after the early sorts and a very even growing sort that remains in condition a long time. This will prove a desirable variety to follow the early spinaches for succession, and its even growing habit will prove profitable to the commercial grower. Being a heavily savoyed or crumpled spinach, this is especially adapted to packing in hampers or baskets for shipment. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 25c; Lb. 60c. At purchaser's expense for transportation, 10 Lbs. \$4.50; 25 Lbs. \$10.00**

King of Denmark Also known as "Antvorskov." Although the plants are ready for use almost as soon as the medium early sorts they remain in good condition from a week to two weeks after all other varieties have gone to seed. The plants are of rapid growth, resemble the Long Season in type but leaves are more crumpled or blistered and are of darker green color. The leaves are thick, stand well after cutting and are of good quality. One of the leading sorts for both the home and market gardener. **Postpaid, Pkt. 10c; 2 Oz. 20c; ¼ Lb. 25c; Lb. 60c. At purchaser's expense for transportation, 10 Lbs. \$4.50; 25 Lbs. \$10.00**

Long Standing Prickly This variety is an improved strain of the long standing type of spinach that matures a little later than the round seeded sorts. The plant is very large at maturity, very vigorous and hardy, and yields a large quantity of medium sized leaves, which are usually rounded at the end, quite thick and uniformly dark green. Seed prickly. It is usually planted in the fall, but is also well adapted for spring use. Sometimes called Prickly Winter. **Postpaid Pkt. 10c; 2 Oz. 15c; ¼ Lb. 20c; Lb. 50c. At purchaser's expense for transportation, 10 Lbs. \$3.50; 25 Lbs. \$8.00**

JULIANA

New Zealand (*Tetragonia expansa*)

Unlike true spinach in type and in that it thrives during hot weather and in any soil rich or poor. The tender shoots are of good quality and may be cut throughout the summer. The plant becomes very large and spreading. The leaves are comparatively small, broad and pointed. Plant three or four seeds in hills two feet apart each way. Germination of the seed can be hastened by soaking in warm water twenty-four hours. **Postpaid, Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 30c; Lb. \$1.00**

SQUASH—*Cucurbita Maxima*

Note: The varieties listed under this heading are true squash. Those previously listed by us as "Summer Varieties" are not squash. They properly belong to the species of pumpkin known botanically as *Cucurbita pepo*. In order to correct a confusing situation which has persisted for many years, we are listing the various cucurbits under the heading to which they properly belong. You will find the "Summer Varieties" listed under the general heading of Pumpkin, page 51.

Squash plants are sensitive to cold and planting should be delayed until continued warm weather is assured. The vines make a vigorous and spreading growth. Seed should be planted in hills four to five feet apart with rows twelve to fifteen feet apart. When well established they should be thinned to not more than three plants to a hill.

The squash is one of the most nutritious and valuable of garden vegetables. The fruits can be had from August until the following spring if carefully handled and properly stored. In gathering squashes for winter storage it is important that they be handled carefully so as not to break or scratch the surface nor bruise the shell. The stem should be left attached to the fruit. The fruits should be placed in small piles to ripen before taking to storage. They should be handled as carefully as eggs at all times. Broken stems and bruised skins are sure to cause decay. The storage room should be dry and moderately warm, at least for the first two weeks, to harden up the shells, after which a lower temperature may be maintained.

Insect pests which attack the vines when small, such as the striped beetle, may be kept off by frequent dusting with some arsenical compound. Arsenate of lead and lime mixed in proportion of one part arsenate of lead to four parts of lime will be found quite satisfactory. Dusting should be done as soon as the plants appear above the ground and should be repeated as often as the bugs appear until the plants are well established.

This is a fall and winter variety of medium size. Although not very thick the shell is rather hard and strong. **Delicious** Usually dark green but sometimes lighter in color and mottled. The flesh is thick, very fine grained and bright yellow in color. It is considered by many to be the best for markets where quality is appreciated as well as very desirable for the home garden. We have by continued and careful selection made a marked improvement in uniformity of type and we believe the seed we offer is equal to the best obtainable. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.50**

Boston Marrow This is a very productive fall and winter variety of medium to large size, oval shape, and thin skin. It is much used for canning and making pies. The fruits when ripe are bright orange with a shading of light cream color. The flesh is of rich salmon-yellow color, fine grained and of excellent flavor, but not as dry as the Hubbard. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25**

Golden Hubbard Fruits of medium size, weighing from six to eight pounds and in shape are like the Hubbard, although in condition for use decidedly earlier. They are long keepers and can be held over in good condition for spring use. The shell is moderately warted, hard, strong and of a beautiful orange red color, except for a bit of olive-green on the blossom end. The flesh is deep-orange, dry, fine grained and richly flavored. A very superior table variety. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25**

Hubbard One of the best of the winter squashes. The vines are vigorous and very productive. The fruits are large, heavy and moderately warted, with a very hard shell. The skin is uniformly dark bronze green. The flesh is bright orange-yellow, fine grained, thick, dry and richly flavored. This squash can be kept in good condition until spring. Our stock of this standard home garden and market variety is carefully selected in regard to quality of the flesh and color of the shell and is much superior to that sold as Chicago Warted or Warty Hubbard. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.50**

DELICIOUS

TOBACCO

The seed should be sown as early as possible after danger of frost is over. It is customary to burn a quantity of brush and rubbish in the spring on the ground intended for the seed bed; then dig and pulverize the earth and mix with the ashes, after which the seed may be sown and covered very lightly. When the plants are about six inches high, transplant into rows four or five feet apart each way. Cultivate thoroughly with plow and hoe.

WHITE BURLEY. A favorite for plug fillers and wrappers. **Pkt. 10c; Oz. 60c; 2 Oz. \$1.00; ¼ Lb. \$1.75**

CONNECTICUT SEED LEAF. A hardy cigar variety, well adapted to growing in the middle and northern states. **Pkt. 10c; Oz. 50c; 2 Oz. 85c; ¼ Lb. \$1.50**

HAVANA. The leaf is very thin and is of fine texture. The variety is much used for cigar wrappers. **Pkt. 10c; Oz. 50c; 2 Oz. 85c; ¼ Lb. \$1.50**

TOMATO

Tomatoes do best on light, warm, not over-rich soil and success depends largely upon securing a rapid, vigorous and unchecked growth during the early part of the season. Sow in hotbed or in shallow boxes in the house from six to eight weeks before they can be set out of doors, which is when danger from frost is past; when the plants have four leaves transplant into shallow boxes or cold-frames, setting them four or five inches apart; give plenty of air and endeavor to secure a vigorous but steady and healthy growth, so that at the time of setting in the open ground they will be strong and stocky. Even a slight check while the plants are small will materially diminish their productiveness.

Set out of doors as soon as danger from frost is over, but before doing so harden off the plants by gradually exposing them to the night air and by the withdrawal of water until the wood becomes hard and the leaves thick and of a dark green color. Transplant carefully and cultivate well as long as the vines will permit. If to be grown without training, the plants are usually set from three to four feet apart each way according to the vigor of growth of the variety.

To insure best results in respect to early ripening as well as the amount and perfection of fruit, it is advisable to train up and trim the vines, especially if the patch is rather small. When the plants have been properly started and are six to ten inches high they will begin to throw out branches. Select the largest and most vigorous of these and pinch off all others except this one and the main stem. Care must be exercised not to pinch off the fruiting branches which, as they appear, can be distinguished by the buds that are formed very early. In a short time these two remaining branches will become equally vigorous and as ordinary varieties will grow four to six feet high during the season, they should be securely tied at intervals of about ten inches to a long stake, preferably two inches square, which has been securely set in near the root of the vine.

Fruit will set to almost any height desired if all side branches are kept trimmed off at intervals of a week. By such a method of training and trimming the fruits are kept clear from the ground and with free access of sunlight they ripen much earlier; the vitality, otherwise exhausted in superfluous branches and leaves, is utilized in forming fruits of largest size, greatest perfection of shape and best quality. For further cultural directions see books listed on inside of back cover.

All our Tomato seeds are from seed stocks carefully selected and saved by ourselves. We challenge comparison of our stocks with any offered.

Earliana Our strain of this first early sort is earlier and decidedly superior to much that is sold as Sparks' Earliana, and the extreme earliness of its large, smooth fruits makes it a very profitable tomato for market gardeners, as well as desirable for the home garden. The vines are small but vigorous and productive. The fruits are bright deep scarlet, medium to large, nearly round and exceptionally smooth for so early a variety. The fruits are borne in clusters near the base of the plant and the bulk of the crop ripens very early. Pkt. 10c; Oz. 50c; 2 Oz. 85c; ¼ Lb. \$1.40; Lb. \$5.00

Avon Early This new extra early scarlet fruited variety is the result of several years of careful selection at our Oakview Stock Seed Farm. The fruits are large for so early a variety, round or slightly flattened, deep scarlet red color, smooth, free from cracks and of fine quality. It produces ripe fruit as early as Earliana and continues to yield marketable fruit for a longer period than the other first early varieties. The vines are vigorous and very productive. We consider this a valuable addition to the list of early tomatoes for the market or home garden. Pkt. 10c; Oz. 50c; 2 Oz. 85c; ¼ Lb. \$1.40; Lb. \$5.00

John Baer An extra early scarlet fruited variety of superior merit. The vines are very hardy and exceptionally productive. The fruits are the largest of the extra early sorts and are also most attractive in color. They are nearly round, smooth, firm and of excellent quality. It is one of the very earliest to ripen its first fruits and it continues to furnish marketable fruits much longer than other very early varieties. It is an invaluable sort for market gardeners, shippers and canners. Pkt. 10c; Oz. 40c; 2 Oz. 75c; ¼ Lb. \$1.10; Lb. \$4.00

Bonny Best The fruits of this desirable early sort are most attractive in shape and color. The crop ripens more uniformly than any other early scarlet fruited sort, and is of superior solidity and interior color. The vines are vigorous and produce a good crop of exceptionally round and deep fruits, bright deep scarlet in color and of very good quality. One of the best for gardeners whose trade demands fruits of beautiful shape and color. A very good variety for the early market and home garden. Pkt. 10c; Oz. 40c; 2 Oz. 75c; ¼ Lb. \$1.10; Lb. \$3.75

Chalk's Early Jewel One of the very best early tomatoes yet introduced. The vines are vigorous and very productive. The fruits are bright deep scarlet-red, nearly round or somewhat flattened, smooth, of large size and most excellent quality. They ripen very early and the pickings continue through a long season. One of the very best second early scarlet fruited sorts and on account of its large size, excellent quality and productiveness, one of the most satisfactory sorts for the home garden. Pkt. 10c; Oz. 40c; 2 Oz. 75c; ¼ Lb. \$1.10; Lb. \$4.00

Cooper's Special A distinct second early variety. The vines are about three feet tall, being intermediate in height between the dwarf and the tall growing sorts. The vines are sturdy and vigorous growing and produce good sized clusters of fruits of attractive shape and color. The fruits are of medium size, globe shaped, light purplish pink color, solid and meaty and of excellent flavor. Because of its compact habit of plant, desirable shape of fruits and excellent shipping qualities, this variety has proven a valuable one for the southern shipper and market grower. For the home garden it should prove equally valuable because of its superior yielding qualities over the strictly dwarf varieties and its compactness compared with the tall growing sorts. Pkt. 10c; Oz. 50c; 2 Oz. 85c; ¼ Lb. \$1.40; Lb. \$5.00

Gulf State Market Although this variety was developed primarily to meet the demands of tomato growers who ship to distant markets, its many excellent qualities make it also a very desirable sort for the home gardener or the grower for local markets. Fruits medium to large, round or globe shaped, show but little depression about stem and are smooth and free from cracks. Color deep purplish pink, ripening well about the stem. The skin is firm and the flesh solid. Unsurpassed by any as a shipping variety and one of the most desirable home or market garden sorts. Pkt. 10c; Oz. 50c; 2 Oz. 85c; ¼ Lb. \$1.40; Lb. \$5.00

ARRANGING ONE OF THE WEEKLY PICKINGS OF OUR TOMATO TRIALS FOR INSPECTION AND WEIGHING

TOMATO—Continued

Early Detroit This splendid variety, introduced by us in 1909, is the largest and best of the early purplish pink tomatoes. The vines are vigorous and very productive. The fruits are very smooth, uniform in size, nearly globe-shaped, firm, and of excellent quality. Early Detroit is one of the most valuable shipping tomatoes yet produced. It is also desirable for the home garden and near markets. Pkt. 10c; Oz. 50c; 2 Oz. 85c; ¼ Lb. \$1.40; Lb. \$5.00

Acme This well known sort is sold also as Essex Early Hybrid. The vines are large, hardy and productive, ripening their first fruits very early, although not an extra early variety. The fruits are purplish pink, round, smooth and of medium size, free from cracks and stand shipment very well. Acme is also used extensively for the home garden. The flesh is solid and of excellent flavor. Pkt. 10c; Oz. 30c; 2 Oz. 55c; ¼ Lb. 90c; Lb. \$3.25

Marglobe This new main-crop or midseason tomato is a wilt-resistant variety bred for use in disease infected districts. In addition to being wilt-resistant, it is a handsome deep red globe shaped tomato of great merit. The plants are vigorous and productive and the fruits are quite large. In our trials they averaged 7½ ounces in weight. The flavor seems to be a happy medium between the acid and non-acid sorts. The shape and size of the fruits makes this a very desirable salad or slicer tomato and the color and quality seem ideally fitted for canning. Pkt. 10c; Oz. 85c; 2 Oz. \$1.35; ¼ Lb. \$2.25; Lb. \$8.00

Livingston's Globe A large, purplish pink, globe-shaped or very nearly round tomato of excellent quality. It is extensively used for shipping. The vines are very vigorous and productive. The fruits are rather uneven in size but are very smooth and mature a little earlier than most midseason or main crop varieties. Pkt. 10c; Oz. 60c; 2 Oz. \$1.00; ¼ Lb. \$1.75; Lb. \$6.00

Greater Baltimore This mid-season or main crop variety is extensively used for canning, and is also a desirable home garden sort. The fruits are of medium to large size, are solid and meaty and ripen evenly. Color, rich bright red. Similar to Stone, but fruits ripen earlier and average smaller. Pkt. 10c; Oz. 35c; 2 Oz. 60c; ¼ Lb. \$1.00; Lb. \$3.50

Stone One of the largest and most solid, main crop or late bright red varieties. It is unsurpassed for slicing and canning. The vines are large, vigorous and very productive. The fruits are bright deep scarlet, oval and very deep, exceptionally smooth and uniform in size. Our stock is distinctly superior to most of that offered under this name, being larger, smoother, more uniform and better colored. Pkt. 10c; Oz. 30c; 2 Oz. 55c; ¼ Lb. 90c; Lb. \$3.25

Ponderosa A purplish pink, main crop tomato of the largest size. The vines are vigorous and very productive. The fruits are very solid, with exceptionally few seeds, fairly smooth and considered of very good quality, especially by those who prefer a tomato quite free from acid. It is very desirable for slicing. Pkt. 10c; Oz. 75c; 2 Oz. \$1.25; ¼ Lb. \$2.00; Lb. \$7.00

Dwarf Stone The vines are dwarf but vigorous and productive. Although an intermediate or rather late maturing variety, the fruits are of good color, being an attractive bright red, exceedingly smooth and very solid. It is a desirable sort for the home garden. We consider this the best of the large fruited dwarf tomatoes. Pkt. 10c; Oz. 75c; 2 Oz. \$1.25; ¼ Lb. \$2.00; Lb. \$7.00

Dwarf Champion This is sometimes sold as the "Tree Tomato." It is a second early or main crop, purplish pink variety, especially desirable where garden space is limited. The vines are about two feet high, vigorous, upright and compact. The fruits are medium sized, exceptionally smooth and of very good quality. Our stock is a very superior strain with more even, smoother fruit than the original. Pkt. 10c; Oz. 75c; 2 Oz. \$1.25; ¼ Lb. \$2.00; Lb. \$7.00

A SAMPLE ROW OF MARGLOBE IN OUR STAKED TRIAL, 1929

Golden Queen The fruits are large and smooth, of bright golden yellow color, sometimes with a slight blush of red. They are as smooth and well shaped as the best of the red varieties and are of superior flavor. Pkt. 10c; Oz. 35c; 2 Oz. 60c; ¼ Lb. \$1.00; Lb. \$3.50

Peach Desirable for preserving or for table decoration. The fruits resemble a peach in shape and size and the color a light terra cotta red with a delicate bloom. The flesh is tender and of good flavor. Pkt. 10c; Oz. 45c; 2 Oz. 80c; ¼ Lb. \$1.25; Lb. \$4.50

WHITE APPLE. The fruits are about one and one-half inches in diameter, round, perfectly smooth and of yellowish white color. Flesh very mildly flavored and delicate. Pkt. 10c; Oz. 35c; 2 Oz. 60c; ¼ Lb. \$1.00; Lb. \$3.50

RED PEAR. Used for preserves and to make "tomato figs." Fruits bright red, distinctly pear shaped and of excellent flavor. Our stock is the true small pear shaped. Pkt. 10c; Oz. 45c; 2 Oz. 80c; ¼ Lb. \$1.25; Lb. \$4.50

YELLOW PEAR. Fruits similar to the Red Pear, but of rich, clear, yellow color and quite distinct from the variety sometimes sold under this name. Pkt. 10c; Oz. 45c; 2 Oz. 80c; ¼ Lb. \$1.25; Lb. \$4.50

YELLOW PLUM. Fruits plum shaped, of clear, deep yellow color; flesh yellow and finely flavored. Esteemed for preserves. Pkt. 10c; Oz. 45c; 2 Oz. 80c; ¼ Lb. \$1.25; Lb. \$4.50

RED CHERRY. Fruits small, about five-eighths of an inch in diameter, perfectly round and smooth. Fine for pickles and preserves. Pkt. 10c; Oz. 45c; 2 Oz. 80c; ¼ Lb. \$1.25; Lb. \$4.50

YELLOW CHERRY. This variety differs from Red Cherry in color only. Pkt. 10c; Oz. 45c; 2 Oz. 80c; ¼ Lb. \$1.25; Lb. \$4.50

YELLOW HUSK OR GROUND CHERRY. Very sweet, mild flavor; used for preserves. Vines low and spreading. Fruits small, about one-half inch in diameter enclosed in a loose husk. The seed we offer is that of the true Yellow Ground Cherry. Pkt. 10c; Oz. 45c; 2 Oz. 80c; ¼ Lb. \$1.25; Lb. \$4.50

TURNIP

The value of Turnips and Ruta Bagas for feeding stock in fall and winter is not fully appreciated, as they are much liked by all kinds of stock and serve to keep them in good condition. They should not be fed, however, in large quantities to milch cows, or the flavor of the milk will be disagreeably affected. We recommend that farmers increase their sowings largely, for we are sure the crop will prove remunerative for stock feeding as well as for table use when the roots are comparatively small.

Both of these wholesome vegetables are very easily affected in their form and flavor by soil, climate, and mode of culture. The Turnip plant is distinguished from the Ruta Baga by its rougher leaves; the root usually matures earlier and is smoother.

For summer use sow early in spring in light, rich or new soil, in drills one and one-half to two feet apart according to the size of the variety and cover one-half inch deep, or sow broadcast, but in either case be sure to have the ground rich and freshly stirred. Thin early and keep free from weeds so that the young plants will not be checked in growth. Any over-crowding will result in rough and poorly flavored roots. It is important to get the spring and summer crop started very early so that the turnips may have time to grow to sufficient size before hot weather causes them to become tough and bitter.

In the middle and western states sow for fall and main crop from the middle of June to the first of August and in the manner given for spring sowing. In the field, turnips are often sown broadcast, though in most cases better results are obtained by drill culture; good results from broadcast sowing are often obtained on new and burned over land where the weeds are not likely to be troublesome.

Especially where not properly sown and cultivated, turnips are sometimes affected by the root maggot and the flea beetle. Among the remedies employed for the maggot are the application of a carbolic acid emulsion, or of sand and kerosene, or of bisulphide of carbon to the soil about the roots when small. A preventive that is considered much better is a rotation of crops. The flea beetle may be checked by spraying the plants with Bordeaux mixture, or a nicotine preparation such as black leaf 40, or by sprinkling with Paris green diluted with land plaster in the ratio by bulk of one to fifty.

For winter keeping, store the turnips in a cool cellar and cover with sand or turf to keep them fresh. Another method is to put them in a pit dug in dry soil where there will be no danger of water standing and to cover with straw overlaid with earth sufficiently deep to keep out frost.

Extra Early White Milan This variety is remarkably early. The tops are very small, strap leaved, upright and compact, so that rows can be planted close together. The roots are clear white, very smooth, flat and are of best quality when only about two inches in diameter. The flesh is clear white, mild, sweet and tender. Very desirable for early use, especially for forcing. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25**

Extra Early Purple Top Milan Similar to Extra Early White Milan except that the roots are a little flatter and an attractive purple-red on the upper portion. Well adapted for forcing. All in all, the Milan turnips leave nothing more to be desired in the way of an extra early garden turnip. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25**

White Egg An early, oval or egg-shaped variety with smooth, clear white roots of medium size which grow half out of the ground. The tops are small with leaves distinctly cut. The flesh is clear white, firm, fine grained and sweet. The roots of this quick growing garden sort when in best condition for use are usually about two inches in diameter and about three and one-half inches long. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 30c; Lb. \$1.00**

Early White Flat Dutch, Strap Leaved A very early, white turnip, extensively used for the table, especially in the southern states. The leaves are entire, toothed on the margin but not divided or lobed, and are upright in growth. The roots are of medium size, flat, very white fleshed, fine grained and sweet. The roots when in best condition for table use are about two and one-half inches in diameter. This variety is also grown as a field crop. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 25c; Lb. 75c**

Early Purple Top, Strap Leaved A very early strap leaved variety, very extensively used for the table. The leaves are few, entire, upright in growth. The roots are flat, of medium size, purple or dark red above ground, white below. The flesh is white, fine grained and tender. Roots when in best condition for table use are about two and one-half inches in diameter but can be grown much larger for stock feeding. This sort is also known as Early Red Top, Strap Leaved. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 25c; Lb. 75c**

Purple Top White Globe This excellent table variety is globular in shape, of good size and very attractive appearance. The roots are large, purple or dark red above ground, white below. The flesh is white, fine grained and tender. The roots when in best condition for the table are about three inches in diameter, but can be grown much larger for stock feeding. This sort keeps well for so early a variety and is one of the best for market use. It is also known as Red Top White Globe. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 25c; Lb. 80c**

Cow Horn or Long White This variety is clear white, except a little shade of green at the top of the root, which is long and carrot-like in form, cylindrical but usually ending in a point, and slightly crooked. The roots are often twelve to fifteen inches long by about two and one-half inches in diameter and grow about three inches out of the ground. The flesh is fine grained and well flavored, and for table use is in best condition when the roots are about two inches in diameter. Desirable for stock feeding and has obtained considerable favor as a market sort. The variety is of very rapid growth and well adapted for fall and early winter use. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 25c; Lb. 75c**

PURPLE TOP WHITE GLOBE

TURNIP—Continued

Large White Norfolk This sort is usually grown for feeding stock, and although a little coarse in texture it is of good quality for the table, but for the latter purpose is in best condition when the roots are about four inches in diameter. The roots are white and smooth, grow to the largest size, and are globe-shaped or slightly flattened. The variety is allowed to stand out during the winter in the south where the tops are used for greens. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 25c; Lb. 75c**

Pomeranian White Globe One of the most productive kinds and in good, rich soil the roots will frequently grow to twelve pounds in weight. The roots are globe-shaped or slightly flattened; skin very white and smooth. This sort is used for stock feeding and is also good for table use if pulled when the roots are not more than four to five inches in diameter. Where the winters are mild the tops are used for greens. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 25c; Lb. 75c**

Seven Top This sort is cultivated extensively in the south for the tops which are used for greens. In many sections it is a favorite green feed for stock and its use like Rape for a pasture crop is quite general. This sort is very hardy and the growth usually continues throughout the winter. The variety is not generally depended on for the root since the tops are produced so abundantly. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 25c; Lb. 80c**

Southern Prize Superior to Seven Top as usually sold and extensively grown in the south where the tops furnish an abundance of cuttings. These are valued highly for salad or greens. The roots of Southern Prize are valuable as well as the tops, being remarkably large, symmetrical and excellent for feeding stock. A favorite for forage in the Virginias and Carolinas where it usually thrives throughout the winter without protection. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 25c; Lb. 80c**

YELLOW FLESHED VARIETIES

Large Amber Globe One of the best yellow fleshed varieties, grown usually for stock feeding. The roots are of large size and of globular shape. The skin

POMERANIAN WHITE GLOBE

is clear yellow except the top which is tinged with green. The flesh is light yellow, fine grained and sweet. The variety keeps well and is a good cropper. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 25c; Lb. 75c**

Yellow Stone The roots are of medium size, uniformly globular and perfect in shape. The skin is smooth and of attractive pale yellow color. The flesh is pale yellow, crisp, very tender and of exceptionally good quality. The roots are suitable for table use when three to four inches in diameter, but are more generally used for stock feeding. **Sold out.**

Yellow Globe A round, smooth, light yellow turnip of medium size. The flesh is crisp, firm and of very good quality for the table or for stock feeding. The roots are in best condition for table use when three to four inches in diameter. This sort keeps well and is a good cropper. **Sold out.**

Orange Jelly or Golden Ball A distinct variety, one of the most delicately flavored of the yellow fleshed turnips. The tops are small. The roots are medium sized, round, very smooth and with deeper yellow skin than most of this class. The flesh is firm, crisp and of most excellent quality. The roots are in best condition for table use when about three inches in diameter. This variety is of quick growth, adapted to spring as well as fall planting, and keeps exceptionally well. Known also as Robertson's Golden Ball. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 30c; Lb. \$1.00**

Purple Top Yellow Aberdeen A medium sized, round, late maturing, long keeping, yellow fleshed turnip. Roots yellow with purple top. Flesh pale yellow and of very firm texture, approaching the Ruta Baga in this regard, but tender and sweet. Since it requires a longer time to mature, the seed should be sown about two weeks earlier than most sorts. It is hardy, productive and valuable for stock feeding. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 25c; Lb. 75c**

ORANGE JELLY OR GOLDEN BALL

RUTA BAGA OR SWEDE

The uses and value of the Ruta Baga are much the same as those of the Turnip. The Ruta Bagas as a class have firmer flesh than Turnips but require a longer season for maturing and usually are more esteemed for winter use, while Turnips are better adapted for the early market. Under most conditions of growth Ruta Baga roots are not so smooth on the surface nor as symmetrical in shape as Turnips but yield heavily, are superior keepers and are the more prized for stock feeding.

Sow the seed from the middle of June to the middle of July, in ground previously enriched with well-rotted manure, in drills about two and one-half feet apart, covering about one-half inch deep. Thin the young plants eight to twelve inches apart in the row. When the roots are full grown and before hard freezing weather, pull them, cut off the tops and store in a root cellar or pit. Ruta Bagas are sometimes sown broadcast and left to take chances with the weeds but the crop is seldom a success, though occasionally on new clearings free from weed seed, fair results are obtained.

American Purple Top or Improved Long Island A strain of Purple Top Yellow ruta baga of American origin, selected to a smaller top and much shorter neck than is usually found, while the roots are a little more globular, grow to a large size and are of the finest quality. Excellent for table use and stock feeding. We consider this one of the most desirable sorts. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 25c; Lb. 75c.**

Ferry's Improved Purple Top Yellow A hardy and productive variety having but little neck. The roots are large, slightly oblong or nearly globe-shaped, fairly smooth, with comparatively small tap root. Color purplish-red above ground and bright yellow beneath. Flesh yellow, of solid texture, crisp and of very good quality. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 25c; Lb. 75c.**

Golden Neckless An all yellow variety with globular roots of large size and very small neck. Flesh fine grained and of excellent quality. A heavy yielder and a good keeper. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 25c; Lb. 80c.**

Hartley's Bronze Top A very large, oval swede with very short neck. The color of the root is yellow, with bronze green top. This is a favorite sort in Canada and can be depended upon to give good satisfaction. Similar to Kangaroo. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 25c; Lb. 75c.**

Monarch or Tankard A yellow fleshed sort, having very large, tankard shaped roots with relatively small neck and tops. The color is purplish-red above ground, yellow beneath. The flesh is very solid, fine grained and sweet. Sometimes sold as Elephant or Jumbo. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 25c; Lb. 75c.**

Sweet Perfection White Absolutely neckless. Tops small, strap leaved; flesh white and unusually fine grained. Vigorous in growth and usually yields better than the yellow fleshed sorts. While valuable for stock feeding, the white flesh is so excellent in quality that it is particularly desirable for table use. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 25c; Lb. 80c.**

FERRY'S IMPROVED PURPLE TOP YELLOW

AROMATIC, MEDICINAL AND POT HERBS

Most of the varieties of herbs thrive best on sandy soil and some are stronger and better flavored when grown on that which is rather poor. In all cases the soil should be carefully prepared and well cultivated, as the young plants are for the most part delicate and easily choked out by weeds.

Sow as early as the ground can be made ready, in drills sixteen to eighteen inches apart, taking pains that the soil is fine and pressed firmly over the seed, or they may be planted as a second crop—the seeds sown in beds in April and the plants set out in June. Most of them should be cut when in bloom, wilted in the sun and thoroughly dried in the shade.

Anise (*Pimpinella anisum*) An annual herb cultivated principally for its seeds which have a fragrant, agreeable smell and a pleasant taste; used medicinally for aromatic cordials, colic and nausea. The leaves are sometimes used for garnishing and flavoring. Plant of slender upright growth with deeply cut foliage; flowers small, yellowish white, borne in large loose umbels. **Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 60c; Lb. \$2.00**

Balm (*Melissa officinalis*) A perennial herb, easily propagated by division of the roots or from seed. The leaves have a fragrant odor similar to lemons and are used for making balm tea for use in fevers and a pleasant beverage called balm wine. Plant one to two feet high, hairy, loosely branched with ovate leaves; flowers white or pale yellow in loose axillary clusters. **Pkt. 10c; Oz. 50c.**

Basil, Sweet (*Ocimum basilicum*) A hardy, aromatic annual. The seeds and stems have a strong flavor and are used in soups and sauces. Plant about eighteen inches high, branching, with ovate toothed leaves; flowers white or bluish white in leafy terminal racemes or spikes. **Pkt. 10c; Oz. 25c; 2 Oz. 40c; ¼ Lb. 75c.**

Borage (*Borago officinalis*) A hardy annual used as a pot herb and for bee pasturage. The bruised leaves immersed in water give it an agreeable flavor and are sometimes used in salads to give a cucumber-like taste. Plant of coarse growth, hairy, with large oval leaves; flowers blue or purplish in racemes. **Pkt. 10c; Oz. 25c; 2 Oz. 40c; ¼ Lb. 75c; Lb. \$2.50**

Caraway (*Carum carui*) A well known herb, cultivated for its seeds, which are used in confectionery, cakes, etc. The leaves are sometimes used in soups, for flavoring liquors and for colic in children. Plant one and one-half to two feet high, with finely cut foliage and clusters of small, white flowers. Plants never seed till the second year. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.25**

Coriander (*Coriandrum sativum*) A hardy annual cultivated for its seed which has an agreeable taste and is used in confectionery and to disguise the taste of medicine. Gather on a dry day, bruising the stems and leaves as little as possible, for when injured they have a disagreeable odor which they impart to the seed. Plant slender, two to two and one-half feet high, strong smelling, with smooth, finely cut foliage and small white flowers. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 30c; Lb. \$1.00**

Fennel, Sweet (*Foeniculum officinale*) A hardy perennial. The seeds of this aromatic herb have a pleasant taste, and are sometimes eaten raw and are used in salads, soups and fish sauces. Plant very branching, two to four feet high, with dense thread-like foliage; flowers light yellow in large loose umbels. Seed oval. **Pkt. 10c; Oz. 15c; 2 Oz. 25c; ¼ Lb. 40c; Lb. \$1.50**

AROMATIC, MEDICINAL AND POT HERBS—Continued

RUE

THYME

WORMWOOD

Dill Mammoth (*Anethum graveolens*) An annual of aromatic odor and warm pungent taste. Its seeds are used for seasoning. It possesses medicinal properties but its largest use is for making Dill pickles. Plant branching, two to three feet high; leaves very much cut into thread-like segments. **Pkt. 10c; Oz. 15c; 2 Oz. 20c; ¼ Lb. 30c; Lb. \$1.00**

Culture for Dill Seed should be sown in early spring where the plants are to stand. A warm sandy soil is preferable but good results can be obtained in any well drained tillable land.

The rows should be from 1½ to 3 feet apart, depending on whether hand or horse cultivation is to be given. Seed should be covered with not more than ¼ inch of soil. When three to four weeks old the seedlings should be thinned to 9 or even 12 inches apart in the rows.

It is desirable at all times to keep the planting free of weeds and the soil loose and open.

In some sections, fall planting of this crop is recommended, it being claimed that not only a better stand is obtained but the plants mature earlier.

Horehound (*Marrubium vulgare*) A perennial herb with an aromatic odor and a bitter, pungent taste. It is a tonic and enters largely into the composition of cough syrups and lozenges. Laxative in large doses. Will thrive in any soil but is stronger if grown on light, poor land. Plant spreading, one to two feet high; leaves ovate, roughened, covered with whitish down; flowers small, white, borne at axils of leaves. **Pkt. 10c; Oz. 50c; 2 Oz. 85c; ¼ Lb. \$1.40; Lb. \$5.00**

Hyssop (*Hyssopus officinalis*) A hardy perennial with an aromatic odor and a warm, pungent taste. It is a stimulant, expectorant and mild tonic. The flowering summits and leaves are the parts used. It does best on dry, sandy soil. Plant upright with narrow glossy dark green leaves; flowers small, borne in whorled spikes, blue, sometimes white or pink. **Pkt. 10c; Oz. 75c.**

Lavender (*Lavendula spica*) A hardy perennial, growing about two feet high. It is used for the distillation of lavender water or dried and used to perfume linen. It should be picked before it becomes dry and hard, and dried quickly. The seed is of rather slow and uncertain germination. Plant erect, with slender grayish green leaves and small violet-blue flowers. **Pkt. 10c; Oz. 50c; 2 Oz. 85c; ¼ Lb. \$1.40; Lb. \$5.00**

Majoram, Sweet (*Origanum marjorana*) An aromatic herb for seasoning. The young tender tops and leaves are used green in summer to flavor broths, dressings, etc., and are also dried for winter use. Usually grown as an annual as it is not hardy enough to endure the winter of the northern states. Plant erect but branching with small oval grayish green leaves and small purplish or whitish flowers. **Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 60c; Lb. \$2.00**

Rosemary (*Rosmarinus officinalis*) A hardy perennial, with fragrant odor and a warm bitter taste. The leaves are used for flavoring meats and soups, and for medicinal drinks. Plant erect, branching with small slender leaves and small light blue flowers. The blossoms form the principal ingredient in the distillation of toilet waters. Plants do not reach a size suitable for use until the second season. **Sold out.**

Rue (*Ruta graveolens*) A hardy perennial with a peculiar, unpleasant smell. The leaves are bitter and so acrid as to blister the skin. It is a stimulant and antispasmodic but must be used with great caution, as its use sometimes results in serious injury. It must not be suffered to run to seed and does best on poor soil. Plant one and one-half to two feet high, becoming woody at the base; leaves much divided; flowers yellow. **Pkt. 10c; Oz. 75c.**

Saffron (*Carthamus tinctorius*) A hardy annual. Cultivated for its flowers which are used principally for coloring, sometimes for flavoring and to make the cosmetic powder called rouge. The flowers should be picked while in full bloom. Plant upright in growth, one to three feet high; leaves ovate, prickly; flower-heads yellow, thistle-like. **Pkt. 10c; Oz. 50c.**

Sage (*Salvia officinalis*) One of the most extensively used herbs for seasoning. It is also believed to possess medicinal properties. Hardy perennial, about fifteen to eighteen inches high. Plant very branching; flowers usually blue, sometimes pink or white; leaves grayish green, oval, wrinkled. Cut the leaves and tender shoots just as the plant is coming into flower and dry quickly in the shade. The plants will survive the winter and may be divided. If this is done they will give a second crop superior in quality. **Pkt. 10c; Oz. 30c; 2 Oz. 55c; ¼ Lb. 90c; Lb. \$3.00**

Savory, Summer (*Satureia hortensis*) A hardy aromatic annual twelve to fifteen inches high, the dried stems, leaves and flowers of which are extensively used for seasoning, especially in dressings and soups. Plant erect, branching; leaves small, narrow; flowers small, purple, pink or white, borne in short spikes. **Pkt. 10c; Oz. 20c; 2 Oz. 35c; ¼ Lb. 60c; Lb. \$2.00**

Thyme (*Thymus vulgaris*) An aromatic perennial herb, eight to ten inches high, used principally for seasoning. Plant very branching with wiry foliage and small lilac flowers. Sometimes the leaves are used to make a tea for the purpose of relieving nervous headache. Sow as early as the ground will permit. **Pkt. 10c; Oz. 50c; 2 Oz. 85c; ¼ Lb. \$1.40; Lb. \$5.00**

Wormwood (*Artemisia absinthium*) A perennial plant of fragrant and spicy odor, but with intensely bitter taste. The leaves are used as a tonic, vermifuge and as a dressing for fresh bruises. Plant erect, two to three feet high, with much divided leaves and loose clusters of small light yellow flowers. It may be raised from seed, propagating by cuttings or dividing the roots. A dry, poor soil is best adapted to bring out the peculiar virtues of this plant. **Pkt. 10c; Oz. 75c.**

Prices on Grass Seeds subject to change. The pound prices include postage; 10 pound prices are by freight or express, at purchaser's expense.

The essentials for a fine lawn are: First, a rich, well drained soil; second, careful preparation of the ground, making it as fine and smooth and mellow as possible; third, a wise selection of seeds; fourth, sowing at such a time as to give the young plants a chance to become well established before being subjected to very dry or cold weather or to the direct rays of the hot summer sun. However much care is bestowed on the soil and seed, no lawn will be beautiful without frequent mowing and rolling. Too much care cannot be bestowed upon the selection of grasses, as some varieties are the most luxuriant in spring, others in summer, others again in autumn and a combination of the proper sorts is required for a perfect, carpet-like lawn. It may be planted early in spring or fall and should be sown at the rate of one hundred to two hundred pounds per acre. If sown in the spring, sow as early as possible, making the surface very fine and smooth, then raking it over and sowing the seed just before a rain which, if the surface has just been raked, will cover the seed sufficiently. For fall seeding sow before the autumn rains and early enough to enable the young grass to become well established before very cold weather, when a light dressing of manure should be given.

Extra Fine Mixed We have given much thought and made many experiments to secure the best selection and think our Central Park Mixture is the best possible for permanent lawns. One pound is the minimum quantity sufficient to sow 400 square feet. **Lb. 65c. postpaid.** At purchaser's expense for transportation; 10 Lbs. \$5.00.

Fine Mixed Lawn Grass A thoroughly first-class mixture made of the best and cleanest grades of those varieties used and best adapted to general lawn purposes. **Lb. 50c. postpaid.** At purchaser's expense for transportation; 10 Lbs. \$3.50.

Shady Lawn Mixture This is a selection of fine grasses which thrive under the shade of trees or buildings where there is little sun. **Lb. 90c. postpaid.** At purchaser's expense for transportation; 10 Lbs. \$7.00.

Canadian Blue Grass (*Poa compressa*) A hardy perennial with creeping root-stalks which form a strong turf. It withstands drought better than most cultivated grasses and is especially valuable in Lawn Grass mixtures. It succeeds best on clay soils but does well on sandy soils, being better adapted for use on sterile knolls and barren fields than probably any other cultivated grass. For hay or pasturage it is best sown with other grasses. Height six to twenty inches. **Lb. 50c. postpaid;** for larger lots inquire for prices.

Crested Dog's-Tail (*Cynosurus Cristatus*) A stoloniferous perennial forming a smooth, compact lasting turf. Thrives best on rich moist land but it can adapt itself to almost any soil. Its roots penetrate deeply thus enabling it to stand severe drouths. The color is the same as that of Kentucky Blue Grass and it is therefore excellent in mixture with that sort for lawns. If sown alone 30 lbs. to the acre is none too much but it is recommended only in mixtures with other sorts. **Lb. 50c. postpaid;** for larger lots inquire for prices.

Kentucky Blue Grass (*Poa pratensis*) **Fancy Clean.** Kentucky Blue Grass is the most nutritious, hardy and valuable of all northern grasses. Sown with White Clover it forms a splendid lawn; for this purpose use not less than fifty-four pounds

of Blue Grass and six pounds of White Clover per acre. If sown by itself for meadow or pasturage use about twenty-eight pounds per acre. **Lb. 50c. postpaid;** for larger lots inquire for prices.

Perennial Rye Grass (*Lolium perenne*) A very valuable variety for permanent pasture. Succeeds well on almost any soil, but is particularly adapted to moderately moist or irrigated lands. Sow thirty to forty pounds per acre in spring. **Lb. 35c. postpaid;** for larger lots inquire for prices.

Red or Creeping Fescue (*Festuca rubra*) A creeping rooted grass, resisting extreme drought, and especially adapted for forming a close and lasting turf in shady places. Valuable also for exposed hillsides, and golf courses. Sow thirty pounds per acre. **Lb. 55c. postpaid;** for larger lots inquire for prices.

Red Top (*Agrostis vulgaris*) **Fancy** (Cleaned from Chaff) In Pennsylvania and states farther south this is known as *Herd's Grass*, a name applied in New England and New York to Timothy. It is valuable for low, wet meadows, producing a large return in good hay. Sow in spring or fall at the rate of eight to ten pounds per acre. **Lb. 40c. postpaid;** for larger lots inquire for prices.

Rough Stalked Meadow (*Poa trivialis*) This is closely related to Kentucky Blue Grass. The name "Rough Stalked" refers to roughness of the stem when allowed to go to seed. It does best on low moist soils but will thrive on any good land. **Lb. 70c. postpaid.**

South German Mixed Bent (*Agrostis stolonifera*) This is particularly valuable for lawns that are to be used for croquet grounds or for tennis courts, because it is benefited more than hurt by tramping and by its bright color adds to the beauty of the lawn. **Lb. 90c.**

White Dutch Clover (*Trifolium repens*) A small creeping perennial variety valuable for pasturage and for lawns. It accommodates itself to a variety of soils, but prefers moist ground. Sow in spring at the rate of six pounds per acre, or when used with other grasses, half that amount. **¼ Lb. 20c; Lb. 65c. postpaid;** for larger lots inquire for prices.

ONE OF THE MANY GARDEN CLUB GROUPS WHICH VISITED OUR FLOWER TRIALS AT OAKVIEW DURING THE SEASON OF 1929

FLOWERS

Descriptive list of best liked kinds with helpful suggestions for growing

SUCCESS with flowers as with vegetables depends on good seed, proper soil, favorable weather, and thorough care.

The flower seeds we sell are grown with the greatest care, tested to be sure they will grow and thoroughly tried at our Trial Grounds to prove their purity.

In our opinion our duty does not end with selling you the best to be had in flower seeds. We feel that you are entitled to the benefit of our more than seventy years of experience in the growing and handling of flowers.

The experienced gardner needs no advice and we do not feel competent to advise those whose past successes are proof of their ability, but for those who wish to have on hand for reference a concise and practical guide, we offer in the following pages many tried and proven suggestions for your consideration. We also furnish cultural directions on each package of seed and we urge that you study them carefully.

Plants are usually divided into three classes, Annuals, Biennials, and Perennials. Annuals are plants which normally live but a single season. Biennials are plants living two years; particularly those which do not bear flowers or fruit until the second season. Perennials tend to live from year to year.

ALL FLOWER SEEDS SENT POSTPAID ON RECEIPT OF PRICE

Half ounces will not be supplied of kinds which sell for less than 30 cents per ounce.

Acroclinium (*Everlasting*) A very pretty, half hardy annual producing white and rose colored, double daisy-like flowers, about one and one-half inches in diameter. Each flower-head is borne singly on a very long stem; leaves small, narrow, alternate. These are "Immortelles" so desirable for wreaths and winter bouquets.

Sow the seed in open ground early in spring, preferably in light, well prepared soil, and cover with one-fourth inch of fine soil firmly pressed down. Thin the young plants to four inches apart. Height fifteen inches.

- Album.** Pure white. Oz. 35c..... **Pkt. 10c.**
- Roseum.** Light rose. Oz. 35c..... " 10c.
- Mixed.** Seeds of the above varieties mixed. Oz. 35c..... " 10c.

Afghan Gilliflower (*Erysimum Perofskianum*) Annual border plants about twelve inches high, of bushy habit bearing a profusion of soft burnt-orange colored flower spikes. Comes into bloom early and remains well into autumn. Seed may be sown in the open as soon as the weather permits. Should be thinned to five or six inches in the row. Oz. 50c..... **Pkt. 10c.**

Ageratum A beautiful, hardy annual of neat bushy habit. The attractive feathery flowers borne in dense clusters are very useful for bouquets. Very desirable for outdoor bedding and borders, being covered with bloom nearly all summer.

Sow outdoors after danger from frost is over; or for earlier blooming start under glass and transplant. Cover the seed with one-eighth to one-fourth inch of fine soil firmly pressed down.

- Mexicanum.** Light blue; about two feet high. Oz. 50c..... **Pkt. 10c.**
- Dwarf White.** Height ten inches. Oz. 60c..... " 10c.
- Dwarf Blue.** Height ten inches. Oz. 60c..... **Pkt. 10c.**
- Dwarf Mixed.** Very desirable for borders and edgings. Oz. 60c..... " 10c.

THREE VARIETIES OF ALYSSUM IN OUR FLOWER TRIALS

Alyssum

The annual varieties can be grown very readily either outdoors or in the house and by cutting back the plants properly an almost constant succession of bloom may be had. Seed can be sown in open ground very early in spring, or may also be sown outdoors in fall.

- Carpet of Snow** (*Compactum procumbens*) A comparatively new variety growing only three or four inches high. Exceptionally fine for borders or edgings. Plants covered with a mass of snow white flowers from early summer until well into autumn. Oz. 60c.....Pkt. 10c.
- Lilac Queen** Of dwarf compact habit. Produces an abundance of bloom of an attractive lavender shade. Plants about six inches high. Oz. 50c.....Pkt. 10c.
- Little Gem** (*Maritimum compactum*) A beautiful white sort for edgings, borders and rock work. The plants grow about six inches high, produce hundreds of flowers and form a compact mass of bloom usually fifteen to eighteen inches across. Hardy annual. Oz. 60c.....Pkt. 10c.
- Sweet** (*Maritimum*) This very hardy annual for borders, edging or massing in small beds, comes into bloom early in the spring, covering itself with clusters or trusses of small, pure white cruciform flowers. They have a peculiar, delicate fragrance and are useful in small bouquets. Usually not over eight inches high but spreading. Oz. 35c.....Pkt. 10c.

Amaranthus

These plants afford brilliant contrasts of color, being useful for tall borders, groups and foliage effects. The leaves and stems are of different shades of red, blended usually with green; two to three feet high.

- Seed may be sown in open ground early in spring, covering one-fourth inch deep; thin to two feet apart.
- Caudatus** (*Love Lies Bleeding*). A rapid growing annual with long, drooping crimson flower spikes. Height about 3 feet. Oz. 35c.....Pkt. 10c.
- Melancholicus ruber**. Deep coppery maroon foliage; very hardy annual. Oz. 35c.....Pkt. 10c.
- Tricolor**. A hardy annual with leaves of red, yellow and green; well known as "Josephs' Coat." Especially brilliant if grown in rather poor soil. Oz. 50c.....Pkt. 10c.

Anemone

Coronaria (*Wind Flower*) Among the earliest of spring flowers. They are about two inches across, with blue stamens, resemble the single poppy in shape and come in several shades of color.

- Sow from April to August. Succeeds well in rich, light loam, in a sunny situation. Plants taken up in the fall will bloom well in pots in the winter. Hardy perennial; outdoors about six inches high. **Single Mixed**.....Pkt. 10c.
- ANTIRRHINUM**—(See *Snapdragon*)
- AQUILEGIA**—(See *Columbine*)

Arabis

Among the earliest blooming plants. Very useful for rock work, edgings, etc. Sow early in spring. Some winter protection is advisable. Hardy procumbent perennial.

- Alpina**. This sort has small pure white, cruciform flowers. Leaves rather slender and somewhat clasping.....Pkt. 10c.

Arctotis

Grandis. An easily grown annual flowering plant introduced originally from South Africa. The plants are two to three feet high and produce a profusion of attractive, large and showy daisy like flowers, the petals of which are pure white on the upper surface and pale lilac blue on the reverse side. The flowers are borne on stems twelve to fifteen inches long and are very desirable for cut flowers as they keep exceptionally well in water.

- Seed may be sown in hotbeds in order to have early flowers but even if sown out of doors in May the plants may be had in full bloom during July and August.....Pkt. 10c.

Asparagus

The ornamental varieties of asparagus are highly valued for their finely cut foliage and are very desirable for growing in fern dishes. When potted they make excellent house plants.

- Soak seed in warm water before planting. When the plants are large enough to handle, transplant into rich, but open and friable soil.
- Sprengeri** (*Emerald Feather*) A most graceful house plant; valuable for hanging baskets. Sprays three to four feet long; light green.....Pkt. 10c.
- Verticillatus**. A beautiful climber with feathery foliage and scarlet berries which are quite ornamental. Sow early in spring. Hardy perennial; ten to fifteen feet high.....Pkt. 10c.

ASTER

Through the constant selection of finer types and larger flowers, the Aster has within the last few years, become one of the most important of the annual flowers. It is equally desirable for cutting and bedding and embraces such a wide range in size, color, form and season of blooming that by planting some of each of the different classes at intervals, a constant succession of bloom can be obtained from late July to frost in the latitude of Detroit. This may be accomplished without the aid of a greenhouse or hotbed. For earlier blooming in the North, seed should be started indoors or in hotbeds (see front pages). If you have given the plants plenty of room in pricking them out, there will be no need of haste in transplanting to open ground. Give the plants time to grow at least three inches tall and they will do better. A strong loam soil that has been well fertilized the previous year seems to be the best adapted for Asters, but any well prepared garden soil should produce satisfactory results.

During hot dry weather the plants should be thoroughly watered two or three times a week. Do this in the evening if possible but do not let the ground become hard and dry if water is available. It is advisable to change the location of the Aster bed as often as practicable. When there is indication of disease in an Aster bed, it should not be used for Asters the following year.

Queen of the Market

(also known as *Queen of the Earlys*) the earliest flowering class of Asters. Comes into bloom a week or ten days in advance of other sorts but remains in bloom until after the later sorts have opened. Flowers are similar to the Late Branching in form borne freely on long stems in a wide range of colors. The plant is open in habit, much branched, with less foliage than other sorts. Fine for cutting and much used for growing under glass.

- Crimson**. Deep crimson red. Oz. \$1.00.....Pkt. 10c.
- Lavender**. Light lavender-blue. Oz. \$1.00.....Pkt. 10c.
- Pink**. Clear light pink. Oz. \$1.00.....Pkt. 10c.
- Purple**. An early deep purplish blue aster. Oz. \$1.00.....Pkt. 10c.
- Rose**. A fine very early red. Oz. \$1.00.....Pkt. 10c.
- White**. Distinctly early, double, fine form. Oz. \$1.00.....Pkt. 10c.
- Mixed**. Many pleasing shades and colors including white, pink, rose, deep red, crimson, lavender, light blue and purple; early blooming and very floriferous. Oz. 80c.....Pkt. 10c.

ASTER—Continued

King Branching in habit and of very vigorous growth. Distinct from other classes in shape of petals which are quilted and often narrow or needle-like.

Crimson. Rich, brilliant crimson.....Oz. \$1.50.	Pkt. 10c.
Lavender. Deep lavender.....	1.50. " 10c.
Pink. Blush pink.....	1.50. " 10c.
Rose. Bright rose.....	1.50. " 10c.
Violet. Violet purple.....	1.50. " 10c.
White. Pure white.....	1.50. " 10c.
Mixed. The foregoing colors mixed.....	1.50. " 10c.

Giant Crego or Comet This is quite distinct from other Asters in form of bloom. The petals are very long, decidedly curled or twisted, and give the flowers a very graceful appearance. Colors are unusually soft and attractive, making them most desirable for bouquets. Flowers are unusually large and resemble Chrysanthemums. This is sometimes called Ostrich Plume.

Crego PinkOz. \$1.50.	Pkt. 10c.
Crimson	1.50. " 10c.
Lavender	1.50. " 10c.
Purple	1.50. " 10c.
Rose	1.50. " 10c.
White	1.50. " 10c.
Mixed. Including all the above colors.....	1.00. " 10c.

Ferry's Late Branching A class of very strong growing asters usually not coming into bloom until the latter part of August, but producing on very long stems full petalled, exceptionally large and deep, double blossoms of fine form. The petals are long, rather broad and of exceptional substance, and the blooms stand shipment well. The plants are distinctly branching in habit of growth and are about two feet high.

Crimson. Flowers bright deep crimson, tinged with carmine. Oz. \$1.00.....	Pkt. 10c.
Heart of France. Deep ruby red. A new and distinct color in Asters. Oz. \$1.00.....	Pkt. 10c.
Lavender. Bright lavender; very large flowers of fine form. Oz. \$1.00.....	Pkt. 10c.
Peerless Pink. A very pleasing shade of light blush pink. Oz. \$1.00.....	Pkt. 10c.
Purple. Flowers are very deep purplish blue; rich and pleasing shades. Oz. \$1.00.....	Pkt. 10c.
Silvery Pink. Rose-pink semi-quilted petals with silvery sheen at tips. Oz. \$1.00.....	Pkt. 10c.
Tyrian Rose. Flowers are very attractive deep purplish rose. Oz. \$1.00.....	Pkt. 10c.
White. Pure white, very attractive. Oz. \$1.00.....	" 10c.
Ferry's Late Branching Mixed. A superb mixture of all the shades and colors found in the above class of late branching asters. Oz. 90c.....	Pkt. 10c.

Aster, Finest Mixed A mixture of very fine strains and colors. The bed can be made more attractive by pulling up the early plants as soon as they are out of bloom. Oz. 85c.....**Pkt. 10c.**

Australian Pea Vine (*Dolichos Lignosus*) An attractive climber with clusters of rosy purple flowers. Very desirable for covering arbors, trellises, fences, etc.

Plant the seed, after the weather has become warm, in the place where the plants are wanted, preferably in light, rich soil. Cover the seed about one inch deep with fine soil firmly pressed down. Thin six to eight inches apart and when six inches high, give support for the vines to run upon. Tender perennial, blooming the first year. Requires a long season to develop, and is recommended only for warm climates. Oz. 90c.....**Pkt. 10c.**

BABY'S BREATH—(See *Gypsophila*)

BACHELOR'S BUTTON—(See *Centaurea*)

Balloon Vine (*Cardiospermum halicacabum*) A favorite with children, being remarkable for its inflated membranous capsules containing the seed. It is sometimes called "Love-in-a-Puff." A rapid and graceful climber. Flowers small, white. The round black seed is marked with a white heart-shaped spot. Sow seed outdoors in open ground early in spring and give the plant some support to run upon. Tender annual; six feet high. Oz. 25c.....**Pkt. 10c.**

Balsam

(*Impatiens Balsamina*) Known also as Lady Slipper. The brilliantly colored double rose-like flowers of this well-known border and bedding annual are thickly set along the branches of the erect bushy plants. The dainty individual flowers, often two inches across, are borne on very short stems and when cut they show to best advantage floating in a dish of water. The colors range from white to dark purple, and are either self colored or spotted and striped.

Balsams are tender and should be started in boxes indoors or in the open ground when danger of frost is past. The plants prefer a rich, moist or even wet sandy loam, and must not suffer for moisture. They do best if allowed eighteen inches apart each way in a sunny situation. Larger and more double flowers will be obtained if some of the young shoots are cut out when quite small, or by transplanting two or three times. Hardy annual; one to two feet high.

Double or Camellia Flowered

- Pure White.** Well adapted for florists' use and for bouquets. very double. Oz. 60c.....Pkt. 10c.
- Dark Red.** (*Atrosanguinea plenissima*) Very double, dark red blossoms. Oz. 60c.....Pkt. 10c.
- Tall Mixed.** About two feet high. Oz. 60c....." 10c.
- Dwarf Mixed.** About one foot high. Oz. 50c....." 10c.

Begonia Very desirable for pot culture or for bedding out in partially shaded locations. Suitable also for window boxes. Sow seed in March in shallow boxes or small pots plunged in moss.

Fibrous Rooted Begonias

The Semperflorens varieties of fibrous rooted Begonias are exceptionally desirable for edgings or border plants. They succeed equally well in either sunny or partly shaded locations and flower continuously from early summer until fall. They are also very attractive as pot plants for winter flowering indoors.

- Vernon** (*Semperflorens atropurpurea*) Flowers brilliant, rich red, set off perfectly by the abundant, glossy green leaves, which are broadly margined with bronze and purple. Hardy and floriferous; the best of the semperflorens class.....Pkt. 15c.
- Semperflorens alba.** A very useful variety, well adapted for house or outdoor culture. Plants of compact dwarf habit, and under proper treatment almost continuous bloomers. Easily grown; flowers very attractive bluish white.....Pkt. 15c.
- Semperflorens rosea.** Like Semperflorens alba, except that flowers are rose colored.....Pkt. 15c.

- BELLIS—(See Daisy)
- BLUE BONNET—(See Texas Blue Bonnet)
- BUTTERFLY FLOWER—(See Schizanthus)

BALSAM

CALENDULA

Calceolaria

A much admired genus distinguished by its abundance of large, showy, sac-shaped or slipper-like flowers which are creamy white and various shades of yellow often splashed, spotted or blotched with dark reddish brown, two plants rarely having flowers marked exactly alike. Leaves large, felty, close growing. Under proper conditions can be grown indoors to perfection, making an exceedingly decorative plant.

Start the seed at any time, except during hot weather, in a temperature of about 60° F. Herbaceous annuals or shrubby evergreen perennials. Plants one to one and one-half feet high.

- Finest Hybrids Mixed.** Seeds saved only from the most perfect flowers; all desirable.....Pkt. 25c.

Calendula

(*Pot Marigold*) A well-known, old-fashioned annual that has long been in favor. During the past few years they have greatly increased in popularity and are now much used by florists for cut flowers.

They are of easy culture, succeeding in almost any soil and are in bloom from early summer till frost. Plants are one and one-half to two feet high.

For the best results plant seed early indoors and transplant to place when danger from frost is past. Satisfactory results may also be obtained from sowings made out of doors after ground is warm and dry. Plants should be thinned to twelve inches apart in the row.

- Double Orange King** (*Calendula officinalis*) Very large double flowers of rich deep golden orange color. Very attractive in beds or borders, also fine for cutting. Oz. 35c.....Pkt. 10c.
- Double Lemon Queen** (*Calendula officinalis*) Very large double flowers of lemon or sulphur yellow. Oz. 35c.....Pkt. 10c.
- Double Meteor** (*Calendula officinalis fl. pl.*) Large beautifully imbricated, double flowers; petals yellow, striped or edged with orange. Desirable for beds, borders and backgrounds. One and one-half to two feet high. Oz. 35c.....Pkt. 10c.
- Double Trianon.** Sulphur yellow with brown center. Petals tipped with mahogany. Oz. 35c.....Pkt. 10c.
- Double Mixed.** A choice mixture of several shades of yellow, orange and primrose. Oz. 30c.....Pkt. 10c.

- CALIFORNIA POPPY—(See *Eschscholtzia*)
- CALLIOPSIS—(See *Coreopsis*)
- CAMPANULA—(See *Canterbury Bell*)

Canary Bird Flower (*Tropaeolum peruvianum* or *Canariense*) A beautiful climber with small, curiously shaped, canary colored blossoms and attractive palmate leaves.

Sow outdoors early in spring, preferably in light, moderately rich soil by the side of an arbor or trellis. Will bloom freely from July until killed by frost. Tender annual; height, ten to twenty feet. Oz. 50c.....Pkt. 10c.

Candytuft (*Iberis*) Showy, branching plants twelve to fifteen inches high and bearing in profusion terminal clusters of beautiful single cruciform flowers in a wide range of colors. Considered indispensable for cutting and very effective in beds, masses or rockeries.

If sown in spring in rich, mellow soil the plants will usually bloom from July to September or if in the fall will be likely to blossom from the last of May to July. Make rows about one foot apart and cover the seeds with about one-fourth inch of fine soil firmly pressed down. When two inches high thin to four inches apart in the row. Larger flowers are obtained if some of the branches are removed, and an abundance of water is desirable. Hardy annual.

- Fragrant.** White, fragrant; foliage finely cut, Oz. 30c.....Pkt. 10c.
- Lilac.** Shading to light purple. Oz. 40c..... " 10c.
- Purple.** A rich dark shade. Oz. 40c.....Pkt. 10c.
- Rose Carmine.** Compact habit. Oz. 40c..... " 10c.
- White.** Oz. 40c..... " 10c.
- Giant Hyacinth Flowered White.** Plants about one foot high, bearing very large, bold spikes of pure white flowers. Very effective for borders or small beds and also desirable for cutting. Oz. 40c.....Pkt. 10c.
- Rocket** (*Empress*) Extra large white trusses; much better than the common white variety. Oz. 35c..... " 10c.
- Fine Mixed.** Oz. 35c..... " 10c.

CANDYTUFT, FRAGRANT

Canna Stately, very ornamental plants of semi-tropical appearance, very desirable for groups and in masses. Plants branching from the roots, with very large, broad leaves, producing clusters of large flowers of varied and brilliant colors from August until cut down by frost.

Sow seed indoors in February in light, sandy soil, first cutting a small notch through the hard outer coat with a knife or file, care being taken not to cut into the germ. Cover with one-half inch of fine soil. Keep the soil moist and the temperature averaging 60° F. Transplant outdoors after danger of frost is over, preferably in very rich soil, giving each plant two feet of room. Tender annual in the open ground, or tender perennial in the green house.

Finest Large Flowering Mixed. Plants comparatively dwarf, about three feet high. Oz. 35c.....Pkt. 10c.

CANTERBURY BELL

Canterbury Bell (*Campanula medium*) Handsome, easily grown herbaceous plants of stately branching habit and profuse bloom for beds and backgrounds. They produce long racemes of strikingly effective bell-shaped or saucer-shaped flowers of rich color. Leaves sessile, lanceolate. Usually grown as a hardy biennial, but if seed is sown very early indoors it may be treated as a tender annual.

Sow seed outdoors early in spring in rows about two feet apart covering with about one-fourth inch of fine soil firmly pressed down. The plants succeed best in light, rich soil with good drainage and in the fall should be transplanted or thinned to eighteen inches or two feet apart and given some protection in severe winter weather. Height of plants, from two to four feet.

- Double Blue.** Shades of blue and purple.....Pkt. 10c.
- " **Rose**..... " 10c.
- " **White**..... " 10c.
- " **Mixed**..... " 10c.
- Single Mixed.** Colors white, and various shades of violet, rose, lilac and blue. Oz. 50c.....Pkt. 10c.
- Calycanthemum Mixed.** Large single flowers, white, lilac, rose and purple. Known as "Cup and Saucer" plant, the calyx forming a cup round the base of the bell.....Pkt. 10c.

Cardinal Climber (*Ipomoea quamoclit hyrida*) A rapid growing annual climber which if planted in a warm sunny situation will attain a height of twenty feet in a season. The flowers resemble those of Cypress Vine but are larger and more showy. The foliage is quite dense and the leaves lacinated.

Seed is usually sown outdoors early in spring in the row where the plants are to remain. Cover seed one-half inch deep. Germination will be hastened if the soil is warm and kept in moist condition. Thin the young plants six to eight inches apart. If very early blooming is desired, seed should be started indoors. Oz. 75c.....Pkt. 10c.

CARPET OF SNOW—(See *Alyssum*)

Carnation

(*Dianthus Caryophyllus*) "Carnation," "Pink," "Clove Pink," "Florists' Pink," are names applied by different people to the same or to different plants of several species as well as to hybrids between them. They are all easily grown from seed and very free blooming, the flowers being bright colored and with a delicious clove-like fragrance. They produce double hemispherical blooms with thick, wax-like petals and long pod-like calyx, the improved varieties we offer being very desirable for cutting. The plants are branching but compact and erect, with slender, bluish green foliage. For larger and better flowers remove all but the terminal buds. Half hardy perennial.

The choicest varieties sold by florists are propagated from cuttings but very beautiful double flowers just as good in form and more fragrant, although not as large, may be produced from the seed we offer. Seed may be sown outdoors early in spring, using well pulverized soil, preferably sandy loam. Make rows one foot apart and cover seed with one-fourth inch of fine soil, firmly pressed down. When two inches high thin to eight or ten inches apart. For earlier blooming start indoors.

First Year Giant. (*Chabaud's*) A recently developed variety of such outstanding merit that it supersedes all the older perpetual flowered strains. Blooms six months after seeding and continues throughout the summer. Plants are of robust, upright habit, bearing very double, clove-scented flowers of extra large size. Should not be confused with the old, small flowered Chabaud type.

- Crimson** Pkt. 25c.
- Rose** " 25c.
- White** " 25c.
- Mixed** " 10c.

Marguerite, Finest Mixed. A well known, standard variety which can be successfully treated as an annual. Flowers large, double, deeply fringed, very fragrant and appear in very attractive shades of color. Desirable for both bedding and cutting. Oz. \$1.00..... Pkt. 10c.

Castor Bean

(*Ricinus*) Tall majestic plants for lawns or driveways; with broad, beautifully lobed, palm-

like leaves of glossy green, brown or bronzed metallic hue and long spikes of scarlet, or of green, prickly seed pods. Makes a rapid, vigorous growth in rich soil. Sow seed outdoors after danger from frost is over, preferably in light rich soil, or for earlier blooms start indoors and transplant. For best development each plant should have at least four feet each way. Its rich, luxuriant growth makes it very attractive for a long distance either grown singly or in groups, or as center plants with Cannas, Dahlias, etc., giving a semi-tropical effect. Seed beautifully striped or mottled. Tender annual; six to fifteen feet high.

Zanzibariensis. Wonderfully vigorous, from ten to fifteen feet high. Leaves have a brilliant luster, measuring about thirty inches across, ranging in color from bright green to deep bronze. Seed very large, oval. MIXED VARIETIES. Oz. 25c. Pkt. 10c.

Sanguineus. (*Tricolor*) Blood red stalks with red venation in leaves; height about six feet. Oz. 25c..... Pkt. 10c.

Mixed. A desirable mixture of all the named varieties. Oz. 25c. Pkt. 10c.

Celosia

An odd and picturesque class of plants having colored foliage and in which the innumerable small flowers and seed vessels together with their supports form a very brilliantly colored mass, sometimes gracefully arranged like plumes and sometimes more dense, being corrugated and frilled at the edge like a cock's comb. They form the gayest possible decoration in beds and borders, retaining their brilliant coloring often from midsummer until frost. The red *Cristata* sorts are sometimes cut before fully ripe and dried in the house for winter bouquets.

Seed may be sown outdoors as early in spring as ground is warm and dry, using if possible light, rich, well pulverized soil, and giving plenty of moisture. For larger and more beautiful plumes start the seed very early indoors and transplant to place when weather is settled. Also adapted for growing in pots in greenhouse and conservatory. Half hardy annuals.

Chinese Woolflower (*Celosia Childsi*)

Crimson. Plants about two and one-half feet high, branch freely and produce large, globular, purplish crimson flowers which resemble balls of brilliantly colored wool. Oz. \$1.50..... Pkt. 10c.

Feathered Varieties (*Celosia Pyramidalis Plumosa*)

Golden Yellow. (*Golden Plume*) Produces an abundance of graceful feather-like plumes of light golden yellow. Height two to three feet..... Pkt. 10c.

Crimson. (*Triumph of the Exposition*) Plant of pyramidal form, bearing many exceedingly graceful feather-like spikes of intensely brilliant crimson color. Height two to three feet..... Pkt. 10c.

Mixed. Plants pyramidal, branching, two or more feet high, covered with long, brilliantly colored and graceful formed plumes in red, yellow or violet. An excellent mixture of plumosa or feather celosias. Oz. 50c..... Pkt. 10c.

Dwarf Cockscomb Varieties (*Celosia Cristata*)

Giant Empress. This beautiful dwarf plant has bronze leaves and forms very large crimson combs. Height about one foot. Pkt. 10c.

Dwarf Rose. One foot high; large rose-colored combs..... " 10c.

Dwarf Yellow. Large yellow combs. Height one foot..... " 10c.

Glasgow Prize (*President Thiers*). Plant resembles a very large comb, densely corrugated; brilliant, deep purplish red. Foliage dark, not abundant; ten to twelve inches..... Pkt. 10c.

Dwarf Mixed. A mixture of the best dwarf growing sorts, Oz. \$2.50..... " 10c.

CARNATION, FIRST YEAR GIANT

Centaurea

These well known flowers are among the most attractive and graceful of the old fashioned garden annuals. They are of easy culture but will amply repay any care or attention given them.

Sow seed in early spring and transplant to open ground or sow in open ground as soon as the weather is warm and settled. Cover seed about one fourth inch deep; thin to three or four inches apart. Fine for bedding or borders. The young plants are very sensitive to wet, and care should be taken to prevent water standing on the leaves.

Cyanus (*Bachelor's Button, Corn Flower*)

Also known as "blue bottle" and "ragged sailor." If seed is sown as early in the spring as the ground is fit they will produce a profusion of flowers of attractive colors from July until late in the fall. The flowers should be kept picked so as to prevent the plants exhausting themselves by seeding. Height about 2 feet.

Cyanus Single Mixed.	Oz. 40c.....	Pkt. 10c.
" Double Blue.	Oz. 50c.....	" 10c.
" " Rose.	Oz. 50c.....	" 10c.
" " White.	Oz. 50c.....	" 10c.
" " Mixed.	Oz. 40c.....	" 10c.

Imperialis (*Sweet Sultan*)

This class produces large very double, finely lacinated flowers of graceful form and delicious fragrance. They are very desirable for cut flowers and will often last for over a week when placed in water. They should be cut before the blossoms are fully opened. Plants 2½ to 3 feet high.

Imperialis Amaranth Red.	Oz. \$1.00.....	Pkt. 10c.
" Lavender.	Oz. 75c.....	" 10c.
" Purple.	Oz. 75c.....	" 10c.
" White.	Oz. 75c.....	" 10c.
" Mixed.	Oz. 60c.....	" 10c.

Suaevolens (*Yellow Sweet Sultan*), Oz. 75c.... " 10c.

Variety Cultivated for Foliage

Seed should be sown under glass and the young plants grown in pots or boxes until settled warm weather, when they may be set about one foot apart where wanted for borders or bedding. In southern latitudes seed may also be sown outdoors in fall.

Gymnocarpa. This is also called *Dusty Miller*. Valuable because of its finely cut silvery gray foliage and graceful drooping habit of growth. Half hardy perennial; one and one-half to two feet high. Pkt. 10c.

CLARKIA

Chrysanthemum

These outdoor "summer Chrysanthemums" are showy and effective for bedding or borders in the garden and desirable for cut flowers. Plants become more bushy and shapely if pinched back in early growth and the practice of disbudding will result in much larger flowers. These annuals are not the winter flowering sorts sold by florists and which are propagated only by division of roots.

Early Blooming Garden Sorts

Seed may be sown in the open ground after danger of frost is over and the seedlings thinned eight or ten inches apart, but the best results come from sowing under cover early in May, and transplanting the young plants to open border. Height one and one-half to two feet.

Evening Star (<i>Heilos</i>) Golden yellow petals dark yellow center.....	Pkt. 10c.
White Gloria. Clear white petals dark disc.....	" 10c.
Carinatum Mixed Colors range from deep yellow to creamy white. Petals ringed or centered with striking markings of scarlet or maroon.....	Pkt. 10c.
Coronarium, double white. Very double white flowers, with petals reflexed and imbricated.....	" 10c.
Coronarium, double yellow. Rich golden yellow double flowers, about one inch across; abundantly produced.....	" 10c.
Coronarium Mixed. A choice mixture of several shades and colors. Oz. 50c.....	" 10c.
Mixed. The choicest Carinatum and Coronarium varieties, both single and double. Oz. 40c.....	" 10c.

Chinese Forget-Me-Not (*Cinoglossum*)

A very hardy annual recently introduced from China. The flowers closely resemble the ordinary Forget-Me-Not in size and form and are of a beautiful shade of medium dark blue. They are borne on graceful branches 18 to 20 inches tall. This is very desirable for bedding and borders as well as for cut flowers. Sow seed one-half inch deep in open ground as soon as ground can be prepared. Thin to 8 or 10 inches in row. If the flowers are cut as they bloom the plants will flower continually throughout the summer.

Amable Blue Oz. 60c..... Pkt. 10c.

Cineraria

usually one to two feet high.

Hybrida, choicest mixed. Large flowering..... Pkt. 25c.

Clarkia

Beautiful hardy annuals with rose colored, white and purple flowers, in delicate but very brilliant shades. The plants are about one and one-half to two feet high and are profuse bloomers. Sow in light, warm soil, as early in the spring as the ground can be worked, or if planted in August they will bloom the following summer.

Double Mixed..... Pkt. 10c.

Cobaea Scandens (*Blue*)

A rapid growing climber with handsome dark green foliage, bearing on graceful stems large, bell-shaped flowers, green at first but rapidly changing to a beautiful deep violet-blue. A wire netting trellis or support for the many green tendrils to fasten upon is preferable to cords or smooth wire. A well established plant will run about thirty feet in a season. For best results start indoors early in spring in rather dry soil and set out the young plants after danger of frost is past. Tender perennial. Oz. 60c..... Pkt. 10c.

COCKSCOMB—(See *Celoisa*)

COIX LACHRYMA—(See *Job's Tears*)

Coleus

Magnificent ornamental foliage plants for house or garden culture. The leaves are of many shapes, and the shades and colors are of remarkable beauty. Sow in shallow pots in rich light soil. Cover the seed lightly with earth and keep the plants in an even moist temperature. Transplant to the open ground in bed or border as soon as danger of frost is over, and in a shady sheltered situation. For house plants seed may be sown indoors in fall. Tender perennial; plants about one to two feet high.

Large Leaved Mixed. Rich, velvety leaves of large size. Plants of exceeding beauty..... Pkt. 25c.

Columbine

(*Aquilegia*) Very desirable, easily grown, old fashioned perennials for borders, forming large, permanent clumps. Blooms profusely early in the season and remains in bloom for a considerable period. Sow the seed which is of rather slow germination, in open ground early in spring in any rich, well drained garden soil. In permanent bed plants should have at least one foot each way. Keep clear of weeds and give each year a dressing of well rotted manure. Seed may also be sown outdoors in fall. Hardy herbaceous perennials; two to three feet high.

- Coerulea hybrida.** Vigorous growing, very handsome, with delicate blue and white flowers; spurs very long. Pkt. 10c.
- Californica hybrida.** Hardy, free blooming, with single orange, red and yellow flowers. " 10c.
- Single Mixed.** Many shades and colors. Oz. 90c. " 10c.
- Double Mixed.** Best and finest colors, including white, shades of blue and brownish purple. Oz. 90c. 10c.

CONVOLVULUS MAJOR—(See *Morning Glory*) CONVOLVULUS MINOR—(See *Dwarf Morning Glory*)

Coreopsis or Calliopsis

Very showy plants for bedding or borders, producing in great profusion for a long time flowers which are bright yellow and rich brown, self colored or with these colors and red contrasted. Sow outdoors early in spring where plants are wanted to bloom, covering seed one-half inch deep; thin to two feet apart. For earlier bloom sow indoors and transplant.

- Tintoria Mixed.** A very hardy and easily grown annual, producing an abundance of brilliantly colored single ray flowers with dark center. The flowers, which are about one and one-half inches across, vary from clear yellow to deep rich brown, the two colors often being beautifully contrasted in the same blossom. Height of plants, two to three feet. Oz. 30c. Pkt. 10c.
- Golden Ray.** This dwarf variety forms compact plants covered with singularly attractive flowers of rich maroon edged with golden yellow. The petals are rather narrow and are often twisted, giving the flowers a star-like appearance. Hardy annual, six to eight inches high, well adapted for edgings. Oz. 65c. Pkt. 10c.
- Hybrida Double Mixed.** Double very showy flowers of rich maroon edged with gold. Oz. 50c. Pkt. 10c.
- Lanceolata grandiflora.** A very hardy perennial, blooming the first year and producing on long stems a succession of rich bright yellow flowers two to three inches across. Very valuable for cutting. Seed may also be sown in fall outdoors. About two feet high. Oz. 60c. Pkt. 10c.

Cosmos

Very effective for autumn flowering in broad masses or backgrounds. A hardy and rapid growing annual, forming bush-like plants with feathery green foliage, four to six feet high, covered with large flowers somewhat resembling the single dahlia. They are gracefully poised on long stems and very useful for decorative purposes.

Sow outdoors early in spring in rather light soil, not too rich, and preferably in a sunny situation. Cover the seed with one-fourth to one-half inch of fine soil firmly pressed down. If planted in rows, make the rows about two feet apart and when the young plants are well up, thin from four to six inches apart in the row.

Early Flowering Cosmos

These early flowering strains are about four feet high and bloom profusely four to six weeks earlier than the giant sorts. The flowers are of good size; well adapted to northern latitudes.

- Early Flowering Crimson.** Oz. 60c. Pkt. 10c.
- " " Pink. Oz. 60c. " 10c.
- " " White. Oz. 60c. " 10c.
- " " Mixed. Oz. 50c. " 10c.
- Early Double Crested Mixed.** Pkt. 10c.

Giant Flowering Sorts

- Hybrida, Giant White.** Oz. 40c. Pkt. 10c.
- Hybrida, Giant Pink.** Oz. 40c. " 10c.
- Hybrida, Giant Mixed.** Flowers white and in shades of pink, rose and maroon. Oz. 30c. Pkt. 10c.

CUCURBITA—(See *Gourd*)

Cyclamen

Well known and universally admired tuberous rooted pot plants producing exceedingly handsome red and white flowers for indoor or winter or spring blooming in greenhouse or window garden. The gracefully richly colored single flowers are of distinctive shape and are borne on stems of good length.

Sow the seed, which is of rather slow germination, in shallow boxes or pans, using light rich soil and covering the seed slightly. Keep at a temperature of 50° to 60° F. and water freely until well started. Seed sown in spring, by autumn will produce a little bulb. If this is placed first in a three inch pot and later repotted as required in a five or six inch pot it will produce blooms the following spring. Seed may also be sown in fall. Tender perennial; one foot high.

Persicum Giganteum Mixed. Beautiful foliage and profuse bloom; each flower is two to two and one-half inches long. Very choice. Pkt. 20c.

Cypress Vine

(*Ipomoea quamoclit*) A most beautiful rapid growing climber with delicate dark green, feathery foliage and many bright, star-shaped, scarlet or white blossoms. Planted by the side of veranda, tree or stakes, and trained properly, there is no handsomer climber.

Seed is usually sown outdoors early in spring in the row where the plants are to remain. Cover seed one-half inch deep. Germination will be hastened if the soil is warm and kept in moist condition. Thin the young plants four to six inches apart.

- Tender annual; about fifteen feet high.**
- Scarlet.** A very deep, rich shade. Oz. 35c. Pkt. 10c.
- White.** Clear paper white. Oz. 35c. " 10c.
- Mixed.** The two foregoing colors. Oz. 30c. " 10c.

Dahlia

A favorite for autumn flowering, blooming the first season from seed if started early. The flowers are so symmetrical and perfect and the range of colors so wide and varied that they will always be popular where display is wanted.

Seed may be sown in spring in open ground after danger of frost is over, but for best results sow in shallow pans at any time from March to June, and transplant the seedlings to small pots. When strong enough and danger from frost is over plant out one foot apart. These plants will produce tubers which should be taken up in the fall and replanted the following spring; these roots will flower freely the following autumn. Tender herbaceous perennial, three to four feet high.

- Finest Double Mixed.** Seeds saved from choicest double flowers, including shades of red, pink, dark maroon, yellow, white, etc. 1/4 Oz. 75c. Pkt. 15c.
- Finest Single Mixed.** Will produce brilliant flowers running through a wide range of striking colors. Oz. 60c. " 10c.

For Dahlia Roots see *Bulbs and Roots*, Page 92.

COLUMBINE, COERULEA HYBRIDA

Daisy (*Bellis perennis*) Charming little plants for edgings and borders, also used for low beds and rock work. The flowers of the improved varieties we offer are borne above the low cluster of leaves on stiff flower stalks, making them suitable for bouquets. With careful cultivation nearly seventy-five per cent are double. Leaves spatulate or obovate.

For best results sow seed early in hotbed and when plants are large enough transplant to a rich soil in a cool and partially shaded situation, setting the plants six inches apart. If plants are started early indoors they will flower the same season, but bloom more abundantly in the spring if sown in autumn and the plants wintered over in cold frames; or can be set out in the open border and protected with mulching. Half hardy perennial; about six inches high.

Double Rose. (*Longfellow*) Finest strain.....Pkt. 10c.
Double White. Clear white....." 10c.
Double Mixed. Shades of rose and white....." 10c.

Datura Large branching plants producing very large, handsome, double or single, trumpet-shaped blossoms of exquisite fragrance. Excellent for late summer and autumn flowering.

Seed may be sown outdoors after danger of frost is over, but for early blooming sow in hotbed and transplant about three feet apart each way. Roots can be kept all winter in cellars. Tender annual; three feet high.

Wrightii. Pure white at the center shaded into lilac and blue; magnificent large single flowers. In warm latitudes can be continued as a perennial. Oz. 40c.....Pkt. 10c.
Chlorantha, fl. pl. (*Humilis flava*) Large, usually double yellow, richly scented. Oz. 40c....." 10c.
Mixed. The above varieties. Oz. 40c....." 10c.

DELPHINIUM—(*See Lavkspur*)

DIANTHUS BARBATUS—(*See Sweet William*)

DIANTHUS—(*See Pinks*)

DIANTHUS CARYOPHYLLUS—(*See Carnation*)

Didiscus Coeruleus (*Blue Lace Flower*) An easily grown garden annual that has within the past few years become very popular for use as a cut flower. The plants grow about 2 feet high and furnish a profusion of beautiful umbel shaped flowers of pale coerulean or heavenly blue color.

Seed sown out of doors after danger of frost is past, will produce plants that will bloom from July to October. It can also be grown satisfactorily in a cool greenhouse or conservatory.....Pkt. 10c.
 DIGITALIS—(*See Foxglove*)

Dimorphotheca Aurantiaca This showy annual with bright orange-yellow flowers, is sometimes called African "Golden-Orange" Daisy. Plants somewhat spreading, with finely cut foliage, producing abundantly on stems of good length, glossy single daisy-like blossoms about two and one-half inches across. The brilliant orange coloring of the petals contrasts strikingly with the black center which is surrounded by a dark colored disc. Well adapted for summer flowering in beds or borders.

Sow early in spring, preferably in light, well prepared soil, not too rich, in a sunny situation. Make rows one and one-half feet apart, covering seed one-fourth inch deep: thin the young plants ten to twelve inches apart. Hardy annual, about one foot high. Oz. \$1.00.....Pkt. 10c.

DOLICHOS—(*See Hyacinth Bean*)

DUSTY MILLER—(*See Centaurea Gymnocarpa*)

EMERALD FEATHER—(*See Asparagus Sprengeri*)

Dwarf Morning Glory (*Convolvulus Minor*) Dwarf plants of trailing, branching habit, each covering a space about two feet in diameter. At midday they are completely covered with a mass of pure white and variously colored funnel shaped blossoms which remain open in clear weather until evening.

Sow seed early in spring in any good garden soil, covering about one-half inch deep. Half hardy annual; about one foot high. MIXED Oz. 30c.....Pkt. 10c.

Eschscholtzia Fully as valuable as the common Poppy for garden ornamentation since the flowers are in bloom through a much longer season. A bed in full bloom of these large saucer-shaped flowers in various shades of yellow with orange center gives a brilliant color effect. The foliage is finely cut and has a bluish tinge or bloom, delicate and very attractive.

Sow seed early in spring or late in autumn where plants are wanted to bloom as they do not bear transplanting well. Use well pulverized soil, make the rows one foot apart and cover the seed one-fourth inch deep. Thin six to eight inches apart. Effective results are also obtained by thinly sowing broadcast and lightly raking in the seed. Hardy annual, low spreading; about one to one and one-half feet high.

Aurantiaca (*True California Poppy*) Rich orange. Oz. 35c.....Pkt. 10c.

Carmine King. Deep carmine. Oz. 60c....." 10c.

Mandarin. The outer side of the petal is tinged with scarlet, the inner side rich brownish orange. Oz. 50c.....Pkt. 10c.

Mikado. Lustrous orange-crimson, Oz. 75c. " 10c.

Scarlet Beauty. Deep scarlet, Oz. \$1.50.. " 10c.

White. Oz. 40c....." 10c.

Mixed. An excellent mixture producing deep yellow, creamy white, scarlet and orange flowers. Oz. 35c.....Pkt. 10c.

Bush (*Hunnemannia*) Flowers beautifully cup-shaped, about three inches across; petals broad, bright yellow with wavy edges; leaves coarser and larger than common kinds. Stems ten inches long and desirable for cutting. In the northern states for early blooming and largest flowers start in pots and transplant outdoors. Height about two feet. Hardy annual, becoming in warm latitudes a tender perennial. Oz. 75c.....Pkt. 10c.

EVENING GLORY—(*See Ipomœa Bona Nox*)

ESCHSCHOLTZIA, AURANTIACA

Euphorbia Marginata (*Snow-on-the-Mountain*) An annual garden plant, popular on account of the showy appearance of its foliage. The plants which are of quite branching habit are about 2 feet high. The foliage is light green, broadly margined with silvery white. Very attractive as a background for lower growing plants or for use in mixed borders.

Seeds are best sown out of doors about May 15th in place where the plants are to stand. They are not particular as to soil but require a sunny situation for best results. Oz. 50c.
.....Pkt. 10c.

FEVERFEW—(See *Matricaria* and *Pyrethrum*)

Forget-Me-Not (*Myosotis*) This is a favorite old-fashioned flower, bearing in profusion, especially in fall and spring, clusters of dainty blue five-petalled blossoms. It thrives either in the shade or open border but flourishes best in a moist, shady situation.

For bloom the first year sow indoors in February or March, and transplant as soon as the ground is warm enough, or sow outdoors as early as possible, covering seed one-half inch deep; thin to six inches apart. Seed may also be sown in fall. Hardy perennial but usually does better if given some protection during winter.

Alpestris. Plants of compact, bushy habit with finely cut foliage, growing six to eight inches high. Flowers blue with a very small yellowish eye. Oz. 75c.....Pkt. 10c.

Disitiflora. Flowers deep blue, a little larger than Alpestris. Compact, early blooming; a good border plant.....Pkt. 15c.

See *Chinese Forget-Me-Not*, Page 70

Four O'Clock (*Marvel of Peru, Mirabilis Jalapa*) Large and beautiful, old-fashioned plants of erect bushy habit which produce in profusion a succession of brilliantly colored salver-shaped flowers, that open about four o'clock in the afternoon, remaining open all night and usually are closed before noon the next day. The flowers are red, white, yellow, or are striped and blotched in shades of these colors. Very desirable for borders, along a wire fence, or as the background of a flower garden, blooming during the late summer and autumn.

Sow seed in spring in open ground after danger of frost is over, covering one-half inch deep. For best development allow two to three feet apart each way. Hardy annual, about two feet high.

Red. Oz. 20c.....Pkt. 10c.

White, Red Striped. Oz. 20c..... " 10c.

White. Pure glistening white. Oz. 20c..... " 10c.

Mixed. An exceptionally attractive mixture. Oz. 20c. " 10c.

Foxglove (*Digitalis*) Stately, old-fashioned border plants, affording dense spikes of large brilliantly colored flowers which are terminal and half as long as the height of the plant. The flowers are very distinct and showy, being thimble-like or long bell-shaped, and the colors include white, lavender and rose, many being spotted or blotched. It is often used as a background, and does especially well in cool, shady locations in front of shrubbery. The leaves are wrinkled and somewhat downy.

Seed may be sown outdoors after danger from frost is over, but for best results start in boxes and transplant. The seed is very small and should be covered lightly and kept moist until plants are well established, when they should be transplanted to two feet apart. May be sown outdoors in fall. Hardy biennial or perennial, usually blooming the second season; three to five feet high.

Ivory's Spotted (*Maculata superba*) A fine variety of colors, usually spotted.....Pkt. 10c.

Fine Mixed. Many shades and markings. Oz. 60c..... " 10c.

Campanulata Monstrosa Mixed. Remarkably odd; each flower spike surmounted with a very large bell-shaped flower.

MIXED COLORS. Oz. 90c.....Pkt. 15c.

French Honeysuckle (*Hedysarum*) Very handsome, branching, free flowering plants, producing racemes of beautiful small fragrant pea-shaped flowers. Not a climber, but well adapted for borders or rock work.

Sow in open border in spring after danger from frost is past, preferably in light and open well drained soil, in a sunny situation. Hardy perennial; often growing four feet.

Coronarium, Scarlet.....Pkt. 10c.

Coronarium, Album, white..... " 10c.

Gaillardia Showy bedding and border plants, remarkable for the profusion, size and brilliancy of their flowers, blooming the first year and among the gayest ornaments of the garden in summer and autumn. Combinations of yellow and red predominate in the highly colored single and double flower-heads two inches or more across, which are borne singly well above the foliage on long, slender stems, suitable for cutting. Leaves alternate, simple, and more or less toothed.

Sow seed outdoors early in spring; cover one-fourth inch deep. Make rows eighteen inches apart and thin eight to ten inches apart in the row; or a longer season of bloom may be secured by planting in frames and transplanting. Plants one to one and one-half feet high.

Grandiflora. Showy garden plants for beds or borders, producing from early summer until fall, gaily colored single flowers of scarlet and orange. The flowers will often measure three inches or more across, and are very desirable for cutting. The flowers should be kept picked to insure a continuance of bloom. Hardy perennial but blooms the first year from early sown seed. Oz. 70c.....Pkt. 10c.

Picta. Plants about one foot high; flowers single, purplish crimson and yellow. A very showy variety for the border and is also very desirable for cut flowers. Hardy annual; with root protection in winter a perennial. Oz. 50c.....Pkt. 10c.

Picta Lorenziana. Gaily colored flowers, double with tubular florets, produced from July even until hard freezing weather. Invaluable for bouquets. Hardy annual; one to one and one-half feet high; with root protection in winter is often treated as a perennial. Sulphur, orange, claret and amaranth mixed. Oz. 60c.....Pkt. 10c.

GILLIFLOWER—(See *Stock* and *Afghan Gilliflower*)

EUPHORBIA MARGINATA

GLOBE AMARANTH

Globe Amaranth (*Gomphrena globosa*) One of the everlasting or straw flowers. A very vigorous and free-flowering plant with flowers resembling clover blossoms in form. Comes in purplish-red, white and striped colors. Masses well for bedding, growing eighteen to twenty-four inches high. Desirable for winter bouquets if cut when in full bloom and dried in a cool, shady place. Should be hung up by stems to keep their natural shape. The seeds ordinarily germinate slowly and it is best to soak them to soften the husk.

- Purple.** Oz. 35c..... Pkt. 10c.
- White.** Oz. 35c..... " 10c.
- Striped.** Oz. 35c..... " 10c.
- Mixed.** Oz. 35c..... " 10c.

Gloxinia Greenhouse perennial plants producing soft velvety green leaves, and rich, beautifully colored trumpet-shaped flowers. Gloxinias thrive best in an equal mixture of leaf mold, loam and sand. If started in February will usually bloom the latter part of summer. Seed may also be sown in fall. The plants are delicate and not easily grown, but the flowers are of such beauty that one generally feels amply repaid for the effort.

Hybrida Mixed. A strain of the richest color and variety of markings. Plants ten to twelve inches high..... Pkt. 25c.

Godetia Easily grown garden plants producing an abundance of cup shaped flowers with petals of satin like texture. Very desirable for beds or borders.

Sow in spring in open ground, covering with one-fourth inch of well pulverized soil firmly pressed down. They do best in a light rather poor soil. Hardy annual, about one foot high.

Fine Mixed. Shades of white, rose and carmine. Oz. 50c..... Pkt. 10c.

Gourd A very interesting and peculiar trailing annual, related to the squash and pumpkin. Most of varieties have large white blossoms and the vines are of such vigorous growth that they are very useful and ornamental for covering old fences and other unsightly objects. The fruits have very hard shells and will keep almost indefinitely when fully ripe. Are much prized by children as toys.

Do not plant the seed till danger of frost is over, and select light, rich soil and a sunny situation. Water freely. Tender annual; ten to twenty feet high.

- Apple Shaped.** The fruits are early, nearly round yellow, sometimes striped. Oz. 25c..... Pkt. 10c.
- Bottle.** This produces handsome, curious, bottle shaped fruits. Oz. 25c..... " 10c.
- Corsican.** Smooth, turban-shaped fruit. Oz. 25c..... " 10c.
- Calabash.** Fruits used in the making of calabash pipes. Oz. 25c..... " 10c.
- Dish Cloth.** Long, green, corrugated fruit, the inside fibrous mass of which, when shell and seeds are removed, makes an excellent sponge. Oz. 25c..... Pkt. 10c.
- Hercules' Club.** Distinctly club-shaped, the longest of all the varieties. Oz. 25c..... " 10c.
- Japanese Nest Egg.** Used as nest eggs; fruits are white, do not crack and are not injured by heat or cold. Oz. 25c..... " 10c.
- Orange.** Also known as Mock Orange. Nearly round, orange-colored. Oz. 25c..... " 10c.
- Pear Shaped, Striped.** Fruits green, with cream colored striping, sometimes changing to yellow. Oz. 25c..... " 10c.
- Powder Horn.** In the form of a powder horn. Oz. 25c..... " 10c.
- Siphon or Dipper.** Useful for dippers; fruits long, bottle shaped, with straight or slightly crooked neck. Oz. 25c..... " 10c.
- Mixed.** Oz. 25c..... " 10c.

Gypsophila (*Baby's Breath*) Delicate, free-flowering plants covered with star-shaped flowers, valuable for mist-like effects and as trimming in bouquets; also for hanging baskets or edgings. Will thrive in almost any well prepared ground but does best on a limestone soil. Make handsome specimens dried.

- Elegans Large Flowering Pure White.** An improved large flowering strain, superior to the common Elegans not only in size of flowers but also in color. Oz. 25c..... Pkt. 10c.
- Elegans Mixed.** Very small, delicate white and rose-pink flowers. Hardy annual; one foot high. Oz. 25c..... Pkt. 10c.
- Muralis.** Charming, easily grown border plants having very small pink flowers. Hardy annual; six inches high Pkt. 10c.
- Paniculata Double White.** A new double type of hardy gypsophila. Very desirable either for cutting or for garden decoration. Largely used by florists for combining with heavier flowers in mixed bouquets. Hardy perennial but will bloom the first year from early sown seed. Plants two to three feet high..... Pkt. 10c.

HEDYSARUM—(See French Honeysuckle)
 HELIANTHUS—(See Sunflower)

Helichrysum (*Everlasting*) Sometimes called Straw Flower. Large full, double daisy-like flower heads with prominent centers and stiff overlapping scales, produced in various shades of bright yellow and scarlet on stems of good length. Desirable as dried specimens and for use in making winter bouquets. For this purpose the flowers should be gathered when on the point of expanding.

Sow early in spring; thin to one foot apart each way. Hardy annual; two to two and one-half feet high.
Monstrosum, fl. pl., mixed. Largest double flowers. Oz. 50c..... Pkt. 10c.

Heliotrope Well-known and much admired border and bedding plants, highly valued for the blue color and fragrance of their branching clusters of small salver-shaped flowers.

Sow the seed early in spring, in mellow soil indoors, and when plants are one to two inches high, prick out into pots. Transplant to place when three to four inches high. Will live outdoors through the winter in a warm climate. Desirable also as a pot-plant for indoor blooming from fall sown seed. Half hardy perennial; one and one-half to two feet high.

Dark Varieties Mixed, Very choice..... Pkt. 10c,

HELIOTROPE

HESPERIS MATRONALIS—(See *Rocket*)

Hibiscus Africanus A vigorous branching plant, of easy culture, with pretty foliage and large, light yellow or cream-colored blossoms, dark purple in the center. The flowers are exceedingly showy, saucer-shaped, often two to three inches across. The seed should be planted early, and the plants should be thinned to one foot apart each way. Hardy annual; about two feet high. Oz. 40c.....Pkt. 10c.

Hollyhock (*Althaea rosea*) For a background to a flower garden nothing is better than the improved strains we offer of this tall old-fashioned garden perennial. The large, richly colored blossoms about three inches across, ranging from deep yellow and red to pure white, are set as rosettes around the strong growing flower stalks.

Sow seed in June or July, in open ground, and in the autumn transplant to permanent position two to three feet apart. The following summer they will bloom. All double varieties are hardy perennials; five feet high.

- Early Flowering Mixed.** Blooms readily the first year from seed sown in spring. A wide range of colors in large single or semi-double flowers..... Oz. \$1.25; Pkt. 15c.
- Double Blood Red**..... ¼ Oz. 50c; " 15c.
- " **Lemon Yellow**..... ¼ Oz. 50c; " 15c.
- " **Deep Rose**..... ¼ Oz. 50c; " 15c.
- " **Pink**..... ¼ Oz. 50c; " 15c.
- " **Salmon.** Rich salmon color, suffused with pink..... ¼ Oz. 50c; " 15c.
- " **Pure White.** Our special improved strain..... ¼ Oz. 50c; " 15c.
- " **Mixed**..... ¼ Oz. 30c; " 10c.

Humulus Japonicus (*Japanese Hop*) Hardy annual climber fifteen to twenty feet high with rough lobed leaves of variegated colors, very rough leaf stems and small flowers. Desirable for covering unsightly objects or shading verandas, trellises, etc. Withstands drought and unfavorable weather exceptionally well. Oz. 60c... Pkt. 10c.

Hyacinth Bean (*Dolichos lablab*) A fine climber with clusters of purple or white flowers followed by ornamental seed pods. Tender annual; from ten to fifteen feet high.

- Alba.** White. Oz. 30c..... Pkt. 10c.
- Purpurea.** Purple. Oz. 30c..... " 10c.
- Mixed.** The foregoing mixed. Oz. 25c..... " 10c.

A BORDER OF HOLLYHOCKS SUGGESTS PERMANENCE

IBERIS—(See *Candytuft*)

Ice Plant (*Mesembryanthemum crystallinum*) A curious plant for hanging baskets, rock-work, vases and edgings; leaves and stems succulent, appearing as though covered with ice crystals. Seed should be sown indoors in February or in hotbed in March. Tender annual trailer; six inches high.Pkt. 10c.

IMMORTELLES—(See *Acroclinium*, *Globe Amaranth*, *Helichrysum*, *Rhodanthe*, *Statice*)

IMPATIENS BALSAMINA—(See *Balsam*)

Ipomoea Beautiful annual outdoor climber of luxuriant growth for covering verandas and arbors, or for screening unsightly objects. Sow preferably in heat and transplant to open border; or sow in open border after the ground becomes warm. Soak seed in luke-warm water before planting. Tender annual; ten to fifteen feet high.

Bona Nox (*Evening Glory*) Violet blue flowers, open in the evening; similar to the white Moon Flower but not as large; seed as large but darker. Oz. 30c; Pkt. 10c.

Coccinea (*Star Ipomoea*) Like a Morning Glory but with smaller rather pointed leaves, and covered with small, scarlet star-shaped flowers. Height often ten feet. Seed small, black..... Oz. 30c; Pkt. 10c.

Limbata Mixed. Very large violet or blue flowers with white margins and throats. The leaves are similar to those of Japanese Morning Glory but are less variegated. Seed large, black..... Oz. 30c; Pkt. 10c.

Setosa (*Brazilian Morning Glory*) Very vigorous rapid growing vine with large, three-lobed leaves and stems covered with brown hair. Flowers open in morning; salver formed, delicate blue or reddish purple with pink star in center and produced in clusters. Seed black, a little larger than Limbata. Oz. 50c; Pkt. 10c.

Fine Mixed. The four above varieties mixed. Oz. 40c. Pkt. 10c.

Early Flowering Sky Blue (*Ipomoea grandiflora rubra caerulea*) A most desirable, early, free flowering sort, with glossy dark foliage and very large flowers that open with a tinge of carmine rose and when mature are bright light blue..... Oz. \$1.00; Pkt. 15c.

IPOMOEA GRANDIFLORA—(See *Moon Flower*)

IPOMOEA PURPUREA—(See *Morning Glory*)

IPOMOEA QUAMOCLIT—(See *Cypress Vine*)

JAPANESE HOP—(See *Humulus Japonicus*)

JOSEPH'S COAT—(See *Amaranthus tricolor*)

Job's Tears (*Coix lachryma*) Curious ornamental grass with broad, corn-like leaves and lustrous slate colored seeds used for beads. Valuable for winter bouquets with everlasting flowers. Plant outdoors early in spring in hills three feet apart, four or five seeds in a hill, and cover half an inch deep. Hardy annual; three feet high. Oz. 20c; ¼ Lb. 30c, Pkt. 10c.

Kochia Childsi (*Summer Cypress*) An easily grown foliage or hedge plant which makes a very rapid growth and presents an extremely symmetrical and attractive appearance. Is a mass of moss-like foliage which retains its clean, bright green color until heavy frost. Turns to dull bronze red after heavy frost and blends with the colors of autumn. Sow outdoors early in spring, covering one-fourth inch deep. Make the rows two feet apart and thin eighteen inches apart. Hardy annual; about two and one-half feet high, Oz. 30c.....Pkt. 10c.

Kudzu Vine (*Pueraria*) Jack and the Bean Stalk. Probably the most rapid growing vine in cultivation. Grows eight to ten feet the first season from seed, and from forty to sixty feet in a single season after becoming established. Makes a dense growth of foliage and is valuable for covering verandas, pergolas and unsightly places. Will thrive on any land that will support vegetable growth. In the north it dies back to the roots in winter and makes new growth each season. Hardy perennial climber. It is advisable to soak seed before planting, Oz. 50c.....Pkt. 10c.

LATHYRUS LATIFOLIUS—(See Peas, Everlasting)

LATHYRUS ODORATUS—(See Sweet Peas)

Lantana The plants form small shrubs, producing in late summer and autumn heliotrope-like clusters of single fragrant flowers that change color. Succeeded by green berries that turn to a deep blue. Start under glass and transplant when danger of frost is over. May also be grown in pots. Tender perennial; about two feet high. **Finest French Hybrids mixed**.....Pkt. 10c.

Larkspur (*Delphinium*) The Larkspur with its long clustered spikes of beautiful irregular flowers, often with long spurs, is especially valuable for its shades of blue. The annual forms are very desirable for bedding and the perennials are strikingly effective as a background for borders and for planting among shrubbery. Seed of annual varieties may be sown outdoors early in spring. For earlier blooming start very early indoors or sow in fall. Thin one to one and one-half feet apart. The perennial sorts are sown in fall or early in spring.

Annual Varieties

Double Tall Stock Flowered Dark Blue. Oz. 75c.....	Pkt. 10c.
“ “ “ “ Lustrous Carmine. Oz. 75c.....	“ 10c.
“ “ “ “ Shell Pink Oz. 75c.....	“ 10c.
“ “ “ “ Sky Blue. Oz. 75c.....	“ 10c.
“ “ “ “ White. Oz. 75c.....	“ 10c.

Double Tall Stock Flowered Mixed. Flowers double, borne on spikes about fifteen inches long. Colors rose, white and shades of blue. Hardy annual; two feet high. Oz. 50c.....Pkt. 10c.

Perennial Varieties

Belladonna. Graceful open spikes with large flowers of light turquoise blue color. Hardy perennial, two to three feet high.....Pkt. 10c.

Bellamosum. Of the same form as Belladonna but with intense rich, deep blue flowers. Hardy perennial, two to three feet high.....Pkt. 10c.

Hybrid Large Flowering Mixed. Single, semi-double and double in attractive shades of lavender, blue and purple. The plants are tall growing and are most desirable as a background for lower growing flowers or for planting in clumps in the open border....Pkt. 10c.

Linum Grandiflorum Rubrum (*Scarlet Flax*) An attractive free-flowering bedding plant with slender foliage and bearing on delicate stems clusters of glossy bright red single flowers, saucer-shaped, with black center. If sown in hotbed and transplanted into good, rich soil, one foot apart, the period of flowering will be much advanced but the seed can be sown in the open ground after the weather is warm. Hardy annual; about one and one-half feet high. Oz. 30c.....Pkt. 10c.

Lobelia The dwarf (*Erinus*) sorts are charming plants, well adapted for bedding, pots or rockeries. They make a neat edging for beds of white flowers and are very effective in masses, being covered with flowers a long time. The flowers are usually blue with lighter center and are borne in neat clusters, each irregularly lobed flower being about five-eighths inch across.

Seed may be sown outdoors after danger of frost is over; or start the plants in pots in greenhouse or hotbed, early in spring and transplant in May to place outdoors. Half hardy annual; usually about six inches high.

True Blue. A very fine, erect and compact variety with clear intensely blue flowers. Oz. \$1.50.....Pkt. 10c.

Crystal Palace. (*Speciosa*) An exceptionally graceful sort having bright deep blue flowers; very dark green foliage. Oz. \$1.50....Pkt. 10c.

Love-in-a-Mist (*Nigella*) Also known as Lady-in-the-Green and as Devil-in-a-Bush, because the blossoms are partly concealed by the finely cut foliage. The large oddly shaped flowers are surrounded by a very dense fringe or wreath of mossy fibres. Both plant and flower are handsome and require but little care. Sow seed in spring in any good garden soil, or may be sown in fall. Hardy annual.

Damascena, fl. pl. Double blue flowers; one and one-half to two feet high. Oz. 40c.....Pkt. 10c.

LOVE-IN-A-MIST

Lupin A very attractive free-flowering plant with long graceful terminal spikes of fragrant pea-shaped blossoms. Blooms early in the season and is desirable for cutting. Sow seed in place in spring and thin to one and one-half feet apart. Hardy annual; about three feet high.

Cruikshanki. Blossoms white, shaded with yellow, blue and purple. Oz. 80c.....Pkt. 10c.

Marigold No flower garden seems complete without this fine old-fashioned garden plant with its brilliant displays of yellow and orange, both tall and dwarf sorts, and with finely cut or entire bright green foliage. The African (*Tagetes erecta*) varieties are tall, usually one and one-half to three feet, and are well adapted for large beds, backgrounds or mixed borders, while the French (*Tagetes patula*) are more dwarf and are often used for borders and pot culture as well as bedding.

For best results start seed early indoors and transplant six inches apart when danger from frost is over, but good blossoms of all varieties of Marigold are often successfully obtained from seed planted in the open ground after danger from frost is past. Make the rows one foot apart. Use well pulverized soil, preferably light sandy loam and cover the seed with about one fourth inch of fine soil firmly pressed down. When about two inches high, thin six to twelve inches. Hardy annuals; in bloom till frost comes.

AFRICAN MARIGOLDS

(*Tagetes erecta*)

Lemon Queen. Tall growing plants bearing large, double flowers. Petals quilled. Color soft lemon yellow. Height two to three feet. Oz. 75c.....Pkt. 10c.

Orange Prince. Of the same type of plant and flower as Lemon Queen, but color is rich, deep orange. Excellent for bedding. Height two to three feet. Oz. 75c.....Pkt. 10c.

Double Tall, Mixed. A tall mixture well adapted for large beds. About two feet high. Oz. 60c.....Pkt. 10c.

FRENCH MARIGOLDS

(*Tagetes patula*)

Double Dwarf, Golden Ball. Flowers deep golden yellow. Very desirable for edgings and borders. Height about one foot. Oz. 50c.....Pkt. 10c.

Double Dwarf, Gold Striped. Brown and golden yellow; very double. Valuable for bedding; one foot high. Oz. 60c...Pkt. 10c.

Double Dwarf, Pale Yellow. Similar to Golden Ball but color is light lemon yellow. Height about one foot. Oz. 50c...Pkt. 10c.

Double Dwarf, Mixed. A mixture of the three foregoing varieties. Oz. 50c.....Pkt. 10c.

Legion of Honor (Little Brownie) This is a single, dwarf, bushy variety and is very desirable for borders. The plants bear in profusion rich golden yellow flowers with garnet blotches in the center of each petal and are about one foot high. Oz. 45c.....Pkt. 10c.

Single Pumila. A dwarf French sort with small, bright orange-yellow flowers; excellent for borders or massing. About twelve inches high. Oz. 75c.....Pkt. 10c.

MARVEL OF PERU—(See Four O'Clock)

MATHIOLA—(See Stock)

MIGNONETTE, MACHET

Matricaria Eximia Grandiflora, fl. pl. (Double Feverfew) Beautiful small white button-like double flower-heads. Plants of bushy growth, with very finely cut dark green foliage; desirable for bedding.

Start the seed very early indoors in shallow boxes; transplant when size permits to small pots or plant boxes, giving each seedling two to three inches of space and set out in the open ground after danger of frost is over. Where climate permits seed may also be sown in fall outdoors. Half hardy perennial, about two feet high. Oz. \$1.50.....Pkt. 10c.

Maurandia Graceful slender climber with glossy ivy-shaped leaves. It produces an abundance of showy irregular trumpet-shaped flowers, one and one-half inches long, usually purplish blue, white or rose colored with lighter throat. Suitable for greenhouse and hanging baskets in the winter and very satisfactory outdoors especially if a small trellis is given as support.

Seed should be started in hotbed or indoors and the young plants set out in open border after danger of frost is over. Tender perennial, blooming the first season; six to ten feet high. Fine Mixed.....Pkt. 10c.

MEXICAN FIRE BUSH—(See Kochia)

Mignonette

(*Reseda*). A well known hardy annual producing dense cone-shaped flower-spikes, made up of thickly set florets of modest colors. It is often used for cutting to combine in bouquets with other more pretentious flowers lacking its delicate and pleasing fragrance. Seed is usually sown outdoors after danger of frost is over and if sown at intervals in spring and early summer a succession of bloom, under favorable conditions, is assured till frost. Well pulverized soil, preferably light sandy loam, should be used and the seed covered one-fourth inch deep. Make rows one foot apart; thin to six inches. For very early blooming seed may be sown in the fall, or started indoors and transplanted. May also be grown in pots. Thrives best in a cool temperature and is usually most fragrant in rather light soil. Hardy annual; one foot high.

Goliath Red. A vigorous plant producing magnificent coppery-red flower spikes. Oz. \$1.00.....Pkt. 10c.

Machet. Of dwarf and vigorous growth, with numerous stout flower stalks, terminated by large spikes of red flowers. This is one of the very best for pot culture. Oz. 50c.....Pkt. 10c.

Machet White. Flowers almost pure white, borne on spikes six inches to a foot in length. Oz. \$1.00..... " 10c.

Reseda odorata grandiflora (Sweet) Large flowered, very sweet; light yellowish white. Oz. 30c..... " 10c.

Mimosa Pudica (*Sensitive Plant*) A curious plant with globular heads of small pink flowers, chiefly valued because of the extreme irritability of its leaves which close and droop at the slightest touch, also in cloudy, damp weather and at night. Start in hotbed in pots, and transplant to a warm situation six inches apart. Tender annual; height one and one-half feet..... **Pkt. 10c.**

Mimulus Strikingly handsome flowers of easy cultivation. Perennial in the greenhouse, annual in the open air. Sow the seed, which is exceedingly fine, under glass in spring or fall in rich moist soil, mixed with sand, and in a somewhat shaded situation. Cover the seed lightly and keep well watered.

Punctatus (*Monkey Flower*) Large curiously shaped yellow flowers, spotted with shades of red and rich maroon. An effective pot plant about eight inches high; blooms first year..... **Pkt. 10c.**

MIRABILIS—(See *Four O'Clock*)

Momordica Gracefully climbing vines, with small yellow blossoms followed by fruits of curious shape. Foliage attractively cut and although tender annuals, the vines run ten feet or more during the season. The seed is very hard and germination will be hastened if a notch is carefully cut through the shell before planting. For best results, sow indoors early in spring and transplant after danger of frost is over, or sow in place as soon as ground is warm and dry.

Balsam Pear (*Charantia*) The fruit is pear-shaped, green changing to bright red and has a warty skin; when ripe it bursts open and shows a brilliant interior of large carmine seeds. Oz. 35c..... **Pkt. 10c.**

Balsam Apple (*Balsamina*) Like Balsam Pear but foliage smaller; fruit much smaller and nearly round, green striped when young, becoming scarlet. Oz. 35c..... **Pkt. 10c.**

Moon Flower (*Ipomœa grandiflora alba*) One of the most vigorous summer climbers and will grow under favorable conditions thirty to forty feet in a single season and be covered evenings and cloudy days with very large, white trumpet-shaped flowers widely extended, often four inches across. Leaves large, frequently four to five inches across. The hard outer coat of the very large, light yellow seed should be cut through with a sharp knife, care being taken not to cut any deeper than the hard shell, and the seed planted about one inch deep in moist soil in a box or pan and set in a warm place. If soil be kept moist, germination will take place in about two weeks. After plants are up, transplant outdoors in a sunny situation when danger from frost is past. Known as *Ipomœa Noctiflora*. Tender annual. Oz. 50c..... **Pkt. 10c.**

Morning Glory (*Convolvulus major*, *Ipomœa purpurea*) A handsome showy climber of easy culture and suitable for covering arbors, windows, trellises, old stumps, etc. The flowers are most brilliant in the morning. Hardy annual.

Seed is usually sown outdoors early in spring in row where plants are to remain. Well pulverized soil should be used and the seed covered one-half inch deep; thin four to six inches apart. If very early blooming is desired, seed may be started indoors and transplanted. Give some support such as strings or cord to the vines as soon as they begin to run and they will often exceed ten feet in height before the season is over.

- Striped. Oz. 30c..... **Pkt. 10c.**
- White. Oz. 30c..... " **10c.**
- Blue. A very attractive shade. Oz. 30c..... " **10c.**
- Purple. Oz. 30c..... " **10c.**
- Crimson. Oz. 30c..... " **10c.**
- Mixed. Many shades from white to dark blue, red and striped. Oz. 20c..... **Pkt. 10c.**

Aurora. Flowers decidedly larger and of heavier texture than those of the common Morning Glory; rich, deep blue shading to a white or rose-colored throat, or an exceedingly rich, deep carmine. Very free blooming. Oz. 30c..... **Pkt. 10c.**

Giant Japanese Mixed. (*Imperial*) The flowers of this variety are of largest size, often three inches or more across; some are brilliant red or rich blue, others are equally brilliant, with broad margins of clear white; some are striped or dotted with blue or red on white or lemon yellow ground, others are clouded with blue and red. The foliage in some plants comes plain green, in others it is mottled with white and shades of yellow or yellowish green. Seed black, larger than other varieties of Morning Glory. Oz. 30c..... **Pkt. 10c.**

Mourning Bride (*Scabiosa or Sweet Scabious*) An old-fashioned but most attractive flower. Its great abundance and long succession of richly colored, fragrant blossoms on long stems make it one of the most useful decorative plants of the garden. Desirable for cutting as well as for beds and borders. Flower heads about two inches across; florets double, surrounding the thimble-shaped cone, and giving a fancied resemblance to a pin cushion.

Seed may be sown in place as soon as ground can be worked; or for earlier blooming sow in hotbed early in spring and transplant one and one-half feet apart. Hardy annual; about two to two and one-half feet high.

- Double Blue. Oz. 60c..... **Pkt. 10c.**
- Maroon. Oz. 60c..... " **10c.**
- Pink. Oz. 60c..... " **10c.**
- Red. Oz. 60c..... " **10c.**
- White. Oz. 60c..... " **10c.**
- Yellow. Oz. 60c..... " **10c.**
- Mixed. Colors include deep and light purple, scarlet pure white and dark mulberry red. Oz. 50c..... **Pkt. 10c.**

MOURNING BRIDE

MOSS ROSE—(See *Portulaca*)
MYRSIPHYLLUM—(See *Smlax*)

Nasturtium

Few plants are more easily grown or remain longer in bloom than the *Tropaeolum* with its large shield-shaped leaves and beautifully irregular flowers having long spurs and brilliantly colored petals. In favorable soil, flowers are produced in abundance throughout the season. Much used for window boxes. If the black aphid appears, spray the foliage vigorously with water.

Seed is usually sown outdoors, as soon as the weather is warm and settled, in the row where the plants are to remain. Well pulverized soil, preferably well drained and moderately rich, should be used and the seed covered with about one inch of fine soil firmly pressed down. A sunny situation is essential for free blooming. If the soil is very rich the plants give a large amount of foliage but few flowers. For earlier blooming, start indoors and transplant to the open ground after danger of frost is over.

Dwarf Varieties (*Tropaeolum minor*) Sometimes called Tom-Thumb sorts. The flowers are brilliant and attractive. The plants are evenly dwarf and are often used for a border. When about two inches high, thin so as to give each plant about one foot of room. Hardy annual; about one foot high.

- | | |
|---|---|
| Aurora. Flowers light reddish orange, veined with carmine. Oz. 20c; ¼ Lb. 45c..... | King Theodore. Scarlet-maroon or brown-red flowers. Oz. 20c; ¼ Lb. 45c..... |
| Chameleon. Almost every shade of color and marking known to nasturtiums; continually changing from day to day. Attractive strains. Oz. 20c; ¼ Lb. 45c..... | Rose. A warm rose-pink. Oz. 20c; ¼ Lb. 45c..... |
| Empress of India. Small, compact plant; deep scarlet flowers; very dark foliage. Oz. 20c; ¼ Lb. 45c..... | Scarlet. Scarlet-orange. Oz. 20c; ¼ Lb. 45c..... |
| | Yellow. Bright rich yellow. Oz. 20c; ¼ Lb. 45c..... |
| | Dwarf Mixed. Many desirable shades and colors. Oz. 15c; ¼ Lb. 40c; Lb. \$1.25..... |

Trailing Varieties (*Tropaeolum Lobbianum*) The Lobbianum differs from the common tall, climbing or running nasturtium in being a little smaller in leaf, more compact in growth, more floriferous and having richer, more varied colored flowers. When about two inches high thin to six inches apart. Give some support to the vines as soon as they begin to run and they will usually grow six to eight feet during the season. The trailing sorts are much used for covering arbors and trellises. Half hardy annual.

| Trailing Mixed. Lobbianum varieties. A wide range of colors and shades. Oz. 15c; ¼ Lb. 40c; Lb. \$1.25..... | Pkt. 10c. |

Nemesia Compact, low growing plants producing an abundance of bright colored flowers of distinctive shape. The flowers are borne somewhat above the foliage and range in color from white through pale yellow and rose to orange and crimson. Very desirable for the open border and for pot culture indoors.

Seed should be sown indoors during March and the plants set out during May to furnish flowers during midsummer; sowing made out of doors will flower during September.

Suttoni Grandiflora Mixed. A choice strain producing flowers of the largest size in rich and varied shades of color.....**Pkt. 10c.**

Nicotiana Handsome bedding plants of the tobacco family, valuable for long and free blooming. The flowers are salver-shaped, with long tubular corollas.

Sow outdoors when ground is warm and dry, covering the fine seed one-eighth inch deep or for earlier blooming start in boxes indoors and transplant to open ground when danger of frost is past. Allow at least eighteen inches to each plant for proper development. Half hardy annuals; about three feet high.

Affinis. Large flowers which are fully expanded only in the morning, evening and on cloudy days. Very fragrant. White. Oz. 40c..**Pkt. 10c.**

Mixed. Crimson, Lavender, Pink, White and Yellow. Oz. 50c.....**Pkt. 10c.**

NASTURTIUM

NIGELLA—(See Love-in-a-Mist)

CENOTHERA—(See Primrose)

PANSY, GIANT FLOWERED

Pansies

Pansies are now produced in an almost infinite variety of colors and markings. Their brilliancy of shading, extended season of blooming and long keeping characteristics make them general favorites. The strains now offered are far superior to the old Heart's Ease or *Viola Tricolor* and the esteem in which they were held by older generations has been heightened by the greater variety and more brilliant colors of the improved sorts. We have been interested in the bringing forward

of advanced types of very large varieties in this country as well as in Europe, and our stocks are the very best obtainable. We spare neither pains nor expense to satisfy the most critical trade. Every year we visit the gardens of the most expert specialists and are in position to give our customers the benefit of their knowledge.

We have annually both out of doors and under glass extensive trials of Pansies from the most successful European growers and from prominent seedsmen. While the variations in shades of color and markings appear almost limitless our list includes the very best strains the world produces.

Seed may be sown indoors very early in spring, or a little later in the open ground, and transplanted when an inch high. Such plants will commence to bloom in June. If sown in July, the plants will bloom in the fall, or if sown in September, the following spring. Well pulverized soil should be used and the seeds covered one-eighth to one-fourth inch deep with fine soil firmly pressed down. The largest and best flowers are produced by young plants which have been grown rather slowly in a partially shaded situation, and in very rich soil; coolness and moisture are necessary. A situation sheltered from high winds and exposed to the morning sun is most favorable and frequent sprinklings are advantageous. Grown indoors pansies make a good winter blooming pot plant. Hardy perennial but usually grown as an annual or biennial. Four to six inches high.

MIXTURES

Ferry's Superbissima Blotched. Exceptionally large fluted and ruffled flowers. Beautifully veined and blotched in all the finer and deeper colors found in pansies. Plants are very vigorous and floriferous. Superior to rather than simply different from the old strains. Pkt. 10c.

Giant Flowering Parisian. As large as Superbissima but less ruffled. Of fine form and substance, wide range of colors, and attractive blotching. Oz. \$2.50. Pkt. 10c.

Trimardeau Mixed. A standard variety producing very large, well rounded flowers, each of which is marked with three large blotches. They are well colored, usually in the darker shades. We recommend this mixture as one sure to give general satisfaction when conditions are at all suitable for pansy growth. Oz. \$1.75. Pkt. 10c.

Extra Choice Mixed. A superb mixture of the best named varieties in every class. Superior in size, coloring, form, substance, variety, and balance. Oz. \$2.00. Pkt. 10c.

Choice Mixed. Seeds saved from large flowering sorts. A special mixture in a wide range of colors, shades and markings. Oz. \$1.25. Pkt. 10c.

SEPARATE COLORS

Giant Black. Very large flowers of rich purplish black. Oz. \$2.50. Pkt. 10c.

" **Bronze.** Light golden bronze or tawny yellow, blotched with mahogany. Oz. \$2.50. " 10c.

" **Light Blue.** Bright light blue flowers with dark blotches on lower petals. Oz. \$2.50. " 10c.

" **Mahogany.** Rich mahogany brown. Oz. \$2.50. " 10c.

" **White.** Very large flowers, all white. Oz. \$2.50. " 10c.

" **Wine Colored.** Large size flowers in shades of red and wine. Oz. \$2.50. " 10c.

" **Yellow.** Flowers pure yellow. Oz. \$2.50. " 10c.

Navy Blue. Deep lavender blue petals, dark blue about eye; large flowering. Oz. \$2.50. " 10c.

Lord Beaconsfield. The lower petals are very deep violet purple, shading in upper petals to white, slightly tinted with purple. The flowers are very large and finely formed. Oz. \$2.50. Pkt. 10c.

Peas, Everlasting (*Lathyrus latifolius*) An easily grown, hardy perennial climber with smaller flowers lacking the fragrance of Sweet Peas, but producing for many weeks a succession of blossoms in clusters of eight to ten each. Only a few flowers can be expected the second season but in the third and fourth, the plants then being well established, an abundance of foliage and blooms is afforded. The plants die down late in the fall and start again in the spring.

Sow the seed outdoors early in spring, using well prepared soil and covering the seed about one inch deep with fine soil firmly pressed down. The perennial sorts are suitable for covering stumps and fences, and on a trellis will often grow five to six feet.

Mixed. Includes white, rose and purple flowers with rose predominating. Oz. 60c.....**Pkt. 10c.**

PERIWINKLE—(See *Vinca*)

(*Peony Roots are listed in our autumn Bulb Catalogue.*)

Petunia

Petunias are unsurpassed for massing in beds. They are also used along walks and driveways and are often grown in window boxes. Their richness of color, duration of bloom and easy culture will always make them popular. They endure drought exceptionally well. The seed we offer is the result of careful hybridization and can be depended upon to give as large a proportion of double flowers as any.

In some strains the flowers are very large, measuring four to five inches across; in others, they are deeply fringed; still others have star-like markings radiating from the throat and extending nearly or quite to the outer margin of the blossom; again, others have full, double flowers. The colors range from white to deep red-purple and are variously striped and blotched.

Plant the seed, which is exceedingly fine, in a warm, open, sunny place. Seeds may be sown directly in the open ground or for early results the plants may be started in cold frame, hot bed or in pots indoors, in a temperature averaging sixty to seventy degrees. Water with a fine spray and do not permit the seedlings to dry out. The plants are tender and should not be trusted in the open until danger of frost is over. Any good, friable garden soil, well pulverized and in good condition may be used, and the seed covered with about one-eighth to one-fourth inch of fine soil firmly pressed down. The rows should be two feet apart. Thin to eighteen inches apart. The plants begin to bloom when small and continue until cut off by frost. Tender perennial, blooming the first year; about one and one-half feet high.

Petunias may also be grown under glass in winter. The best method is to sow seeds late in summer and grow stocky plants in pots, but old plants can be lifted on the approach of cold weather, cut back and taken inside for winter bloom.

Hybrida Dwarf Rosy Morn. Compact in habit of plant but producing throughout the summer an abundance of clear rosy pink flowers with white throat. An excellent sort for borders, edgings or porch boxes. $\frac{1}{4}$ Oz. 75c.**Pkt. 10c.**

Hybrida Dwarf White. Plants of compact habit, covered with a profusion of white flowers. $\frac{1}{4}$ Oz. 75c.**Pkt. 10c.**

Hybrida Dwarf Mixed. Plants compact growing. A choice mixture of many shades and colors. Very desirable for small beds. $\frac{1}{4}$ Oz. 60c.**Pkt. 10c.**

Hybrida Crimson King (General Dodds). Single flowers of rich, dark purplish red color. $\frac{1}{4}$ Oz. 60c.**Pkt. 10c.**

Hybrida Rose King (Lord Courtenay). Brilliant rose with yellow throat. $\frac{1}{4}$ Oz. 60c.**Pkt. 10c.**

Hybrida Violet King. Single flowers of deep violet-purple. A very desirable strain of this popular dark petunia. $\frac{1}{4}$ Oz. 60c.**Pkt. 10c.**

Hybrida White. Large single white flowers. $\frac{1}{4}$ Oz. 60c.**Pkt. 10c.**

Hybrida Striped and Blotched. Includes striped or blotched flowers in a wide range of brilliant colors. A fine bedder. Oz. \$1.00**Pkt. 10c.**

Hybrida Choice Mixed. An excellent range of colors including white, stripes and shades of rose, red and purple. A very satisfactory mixture. Oz. 75c.**Pkt. 10c.**

Large Flowered Mixed. Plants vigorous and flowers very large; some striped, others self colored. $\frac{1}{2}$ Oz. \$1.50.**Pkt. 10c.**

Double Finest Mixed. The seed we offer will produce a large percentage of double flowers in a good range of colors.**Pkt. 20c.**

Fringed Single Mixed. Very attractive, deeply fringed flowers in a variety of colors.**Pkt. 20c.**

Fringed Double Mixed. Large flowering; many colors; flowers beautifully fringed.**Pkt. 25c.**

Superbissima Mixed. Deeply frilled single flowers of immense size, superbly colored with throats beautifully veined. We have carefully compared our strain with others sold as "Giants of California," etc., and have found it to be the peer of the best. Comes practically 100% true to type.**Pkt. 25c.**

PETUNIA, SUPERBISSIMA

PHLOX DRUMMONDI, STAR MIXED

Phlox Drummondii (*Large Flowering*) Unequaled in the magnificent display of their many and brilliantly colored flowers. The plants are hardy bush-like annuals with many broad flat-topped clusters of nearly round and star-shaped flowers. They are of easiest culture and bloom profusely through a long season. Especially attractive in masses or ribbon beds of contrasted colors; useful as window garden plants and very desirable for combining in mixed bouquets.

Seed is usually sown very early in spring outdoors in rows one foot apart. A sunny situation is desirable. Well pulverized soil, preferably rich and mellow, should be used and the seed, which germinates rather slowly, covered with about one-fourth inch of fine soil firmly pressed down. Thin to four inches apart. For very early blooming, seed may be sown outdoors in fall, or started indoors and transplanted early in April. Hardy annual; one foot high.

White. Pure white, very desirable. Oz. \$1.00	Pkt. 10c.
Maroon. Very deep maroon. Oz. \$1.00.....	" 10c.
Yellow. Creamy yellow. Oz. \$1.00.....	" 10c.
Pink. Deep salmon-rose. Oz. \$1.00.....	" 10c.
Scarlet. With maroon center. Oz. \$1.00.....	" 10c.
Crimson. Crimson, pure white eye. Oz. \$1.00.....	" 10c.
Violet. Deep violet-blue, white eye. Oz. \$1.00.....	" 10c.
Extra Choice Mixed. Best large flowered varieties. Our mixture is unexcelled for profusion of bloom and wide range of brilliant colors. Oz. 90c.....	" 10c.
Star Mixed. Deeply cut, star-shaped flowers which are slightly smaller than those of our regular Phlox Drummondii but very bright and attractive. (See further description on page 8.) Oz. 90c.....	Pkt. 10c

Pinks (*Dianthus*) The Pinks are old-fashioned favorites and as a class are more varied in color than the Carnations but lack their fragrance. Both the single and double Pinks are well adapted for bedding and borders, and are suitable also for cutting as the stems are of good length and the brilliantly colored flowers often one and one-half to two inches across, contrast vividly with the rather narrow bright green leaves. The Pinks are annuals and not perennials like the Carnation.

Seed may be sown in the open ground in spring after danger of frost is past, in the place where the plants are wanted to bloom. Use well pulverized soil, preferably sandy loam. Make the rows one foot to fifteen inches apart and cover the seed with one-fourth inch of fine soil firmly pressed down. When two inches high, thin six to eight inches apart. Plants compact, bushy, usually about one foot high.

Single Crimson. Rich, vivid crimson color; of large size and splendid substance, evenly and finely lacinated.....	Pkt. 10c.
Single White. Pure white flowers with finely cut or lacinated petals.....	Pkt. 10c.
Single White Marbled Rose. Single flowers beautifully marbled and striped with light shades of red upon lighter ground. Border of petals finely cut or lacinated.....	Pkt. 10c.
Royal Pinks (<i>Heddewigi nobilis</i>) These very large, single flowers afford a wide range of colors. Petals deeply cut and fringed and flowers in splendid shades from blood-red to carmine, pink and even white. Plants dwarf and very free flowering	Pkt. 10c.
Heddewig's Single Mixed. A splendid mixture of single flowers of the best shades and beautifully marked. Plants dwarf; very free flowering. Oz. 50c.....	Pkt. 10c.
Double Dark Purple. An attractive and particularly useful color in pinks. The flowers are double, of large size, fine form and are suitable for cutting.....	Pkt. 15c.
Double Pure White. Clear white, double and fully as large as the popular Marguerite Carnation; desirable for cutting	Pkt. 15c.
Double Diadem Mixed (<i>Heddewig's</i>) Very regular, double, and all tints from crimson purple to deep black purple. Oz. 65c.....	Pkt. 10c.
Double Japan Mixed (<i>Chinensis laciniatus</i>) The flowers are rich in hue; very double, deep fringed petals. Colors vary from white to rose, lilac, carmine, crimson, scarlet, purple, brown and almost black, spotted and striped. Oz. 90c.....	Pkt. 10c.
Double China Mixed (<i>Chinensis</i>) Very double flowers borne in trusses. The color range includes white and dark crimson selves, white tipped with light purple and shades of red and rose with darker blotchings. This mixture is unsurpassed in variety of brilliant coloring and marking. Oz. 45c.	Pkt. 10c.

Poppy

(*Papaver*) These well-known hardy annuals and perennials flower in great profusion throughout the summer. Both the single and double varieties are very desirable for bedding and borders. The flowers are remarkable for their large size, delicacy of tissue and wide range of bright dazzling colors.

As early in spring as possible can be worked sow the seed, which is quite small, where the flowers are to bloom as the annual varieties do not bear transplanting. Pulverized soil, preferably light sandy loam, should be used. Make rows fifteen inches apart and cover seed one-fourth inch deep. When two inches high, thin from six inches to one foot. To insure continuous bloom during a long season the flowers should be cut regularly and no seed pods allowed to form.

Annual Varieties

- American Legion.** The brilliant red Poppy of Flanders, adopted as the emblem of the veterans' organization whose name it bears. Flowers somewhat smaller than the Shirley's; bright orange-scarlet in color. Fine for bedding. Oz. 60c..... **Pkt. 10c.**
- Shirley.** A magnificent variety, producing through a long season large single flowers of charmingly delicate colors, ranging from pure white through shades of pink and rose to brightest scarlet and carmine-red. If cut before the blooms are fully expanded, they will keep fresh in water for several days. Hardy annual, about twenty inches high. Oz. 40c..... **Pkt. 10c.**
- Ryburgh Hybrid.** A very desirable new strain of poppies obtained by crossing the Shirley and Ranunculus varieties. They range in color from white through shades of salmon and pink to scarlet and red. The flowers are double or semi-double and the delicate texture of the tissue-like petals gives the flower an exceptionally dainty appearance. Oz. 75c..... **Pkt. 10c.**
- Tulip Flowered.** Single bright scarlet tulip shaped flowers, a black spot appearing at the base of each petal. Hardy annual, about one foot high. Oz. 60c..... **Pkt. 10c.**
- Single Mixed.** Attractive single flowers in a wide range of colors. Many of the flowers are fringed and all are of delicate texture. Oz. 30c..... **Pkt. 10c.**
- Double Fringed Carnation Red.** Flowers large and very double, each petal being so finely cut as to give the blossom the appearance of a large ball of brilliant cardinal colored silk. Hardy annual, two feet high. Oz. 40c..... **Pkt. 10c.**
- Double Fringed Carnation White.** The finest double white poppy. Plant upright growing and floriferous. Flowers three to four inches across, perfectly double, finely fringed. Hardy annual, two feet high. Oz. 40c..... **Pkt. 10c.**
- Double Fringed Carnation, Mixed.** Double, finely fringed flowers in shades of white, pink and red. Oz. 30c..... " **10c.**
- " **Peony White.** Pure white, double showy ball shaped flowers. Oz. 40c..... " **10c.**
- " **Red.** Very double, ball shaped flowers of rich deep crimson. Oz. 40c..... " **10c.**
- " **Mixed.** Large showy double flowers of various colors; hardy annual, about two feet high. Oz. 30c..... " **10c.**
- " **Choice Mixed.** Very large, double poppies in a variety of colors and forms. About two feet high. Oz. 25c..... **Pkt. 10c.**

Perennial Varieties

Perennial poppies do best in rows one and one-half feet apart and one foot apart in the row. Seed may be sown outdoors either in spring or fall.

Orientele. Very large single gorgeous scarlet blossoms; base of petals bluish black. One of the most showy garden perennials; about two feet high. Oz. \$1.50..... **Pkt. 10c.**

Orientele Hybrids Mixed. A choice mixture of Orientele Poppies in shades of white, salmon, orange, scarlet and crimson. Oz. \$2.00..... **Pkt. 10c.**

We do not furnish seed of the opium poppy.

Portulaca

Sometimes called Moss Rose. Few flowers make such a dazzling display of color in the bright sunshine as a bed of portulacas. The glossy cup-shaped single flowers and rose-like double flowers, about one inch across, range through many shades of red, white, pink, orange, yellow, striped, etc. Plants low growing or creeping with thick, fleshy stems tinged with red and small quill-shaped leaves. Desirable also for edgings. They are in bloom through a long season.

Sow seed outdoors, after weather is warm and settled, where the plants are to stand in rows one foot apart. They should have a sunny situation. Well pulverized soil should be used but it does not need to be rich. Cover seed about one-eighth inch deep. Thin to two inches apart. For massed beds seed can be sown broadcast, the soil sifted on and the whole bed carefully pressed with a board. For earliest blooming start under glass and transplant to place after danger of killing frost is over. Tender annual; about nine inches high.

Single Varieties

- Single Orange.** Oz. 75c..... **Pkt. 10c.**
- " **Scarlet.** Oz. 75c..... " **10c.**

POPPY, AMERICAN LEGION

Primrose, Evening (*Enothera*) Large, showy saucer-shaped blossoms, usually fully expanded only towards and during evening. The blossoms are yellow or white and are very freely produced.

Lamarckiana (*Showy Evening*) Superb spikes of large, bright yellow blossoms about three inches across. Sow in open ground early in spring, or if blooms are wanted the first season, start very early in hotbed and transplant. Hardy perennial but blooms the first year; height four feet.....Pkt. 10c.

Primula Sinensis (*Chinese Primrose*) This beautiful winter blooming pot plant is especially valuable in that its brightly colored and finely formed flowers and prettily cut foliage may be had in perfection from November until late in spring.

Sow seed indoors in well drained, shallow pans or boxes from April to last of July, to insure flowering the following winter. For best results use finely sifted leaf mold, loam and sand in equal parts. Cover slightly and place the pans in a temperature of about 60° F. Water with a fine spray. If covered too deeply or if allowed to dry after being wet the seed will not germinate. Transplant into pots and keep in a cool place so that the plants will grow slowly until ready to bloom. Seed may also be sown in fall. Greenhouse perennial, six to ten inches high.

Single Fringed, Choicest Mixed.....Pkt. 25c.

Double Fringed Mixed. Very choice; shades of red, rose, white, etc. The seed we offer can be depended on to produce a very large proportion of double flowers.....Pkt. 25c.

Pyrethrum Very ornamental, both foliage and flowers. Well adapted for bedding and borders. Sow outdoors in spring as soon as ground can be worked, or for best results start the seed indoors and transplant after danger from frost is past. (*See also Matricaria*)

Parthenifolium Aureum (*Golden Feather*) Beautiful dwarf gold leaved bedding plant. Flowers white. Half hardy perennial often treated as an annual; height one foot. Oz. 90c.....Pkt. 10c.

Roseum Single Mixed (*Painted Daisy*) Large daisy-like flowers, the petals of which are brilliantly colored in red or rose. Plants from two to two and one-half feet high, with finely cut foliage. Bright, easily grown, and becoming very popular. Hardy perennial. (*For further description see page 8*).....Pkt. 10c.

Rhodanthe One of the most beautiful everlastings. Sometimes called Straw Flower. The flower-heads are somewhat bell-shaped, becoming when mature fully expanded and sometimes reflexed. They are gracefully poised on slender stems. The mixture we offer includes rose with golden center and white with yellow disc. Blooms should be gathered before fully expanded and dried in the shade.

Start under glass, or sow seed outdoors after danger of frost is over. Tender annual; one and one-half to two feet high.

Rose Oz. 75c.....Pkt. 10c.

White Oz. 75c..... " 10c.

Mixed Oz. 75c..... " 10c.

RICINUS—(*See Castor Bean*)

Rocket, Sweet (*Hesperis matronalis*)

Produces loose clusters of flowers very fragrant during the evening and useful for cutting. Flowers cruciform, somewhat resembling the single Stock but smaller.

Seed germinates readily in open ground if sown after danger from frost is past. Hardy perennial.

Purple. Plants two and one-half to three feet high.....Pkt. 10c.

White. About two feet high... " 10c.

Rose Multiflora Dwarf Perpetual, Mixed. Plants under good care will commence to flower when six inches high and about two months old, and continue to grow and bloom until they form compact bushes about sixteen inches high, well covered with single and double flowers.

Open the berries and separate the seeds, sowing in pots of rich sandy soil and keep at about 70° F, and moderately moist. When plants are about one inch high transplant and give plenty of light and air. Tender perennial; blooming the first year.....Pkt. 15c.

Salpiglossis Very showy bedding or border

plants with richly colored, funnel-shaped flowers which are borne on long graceful stems. The flowers of purple, scarlet, crimson, yellow, buff, blue or almost black are beautifully veined or penciled. They are produced abundantly during the entire summer, and are certainly worthy of more general cultivation than they have heretofore had. As they lend themselves readily to artistic arrangement they are very desirable for cut flowers. They are easily grown and are most desirable for beds or borders.

For early blooming seed may be started indoors as early as the middle of March and the young plants set out in the garden one foot apart, or seed may be sown outdoors after settled warm weather. Blooms from August to October. Half hardy annual; about two feet high.

Extra Fine Mixed. Flowers of many beautiful shades, finely veined or penciled. A choice mixture of large flowering varieties. Oz. 90c; Pkt. 10c.

SALPIGLOSSIS

Salvia

(*Flowering Sage*) Among the most brilliantly colored of garden flowers and extremely useful for bedding; also valuable for pot culture and cutting. Blooms are borne in long spikes well above the foliage and are of fiery red, crimson or blue, continuing in flower a long time. The densely filled flower spikes are often eight to ten inches long and include thirty or more tube-like florets, one to two inches in length.

Start early in heat and transplant into light soil one to two feet apart; or seed can be sown outdoors after danger from frost is past. Tender perennial, but blooms the first season; height one and one-half to three feet.

Splendens. The large, brilliant scarlet flowers are in very striking contrast with the rich, dark green background of dense foliage. This variety is most generally used in parks and on extensive lawns, as it is more vigorous than the dwarf varieties. One of the most distinct and effective bedding plants. Two and one-half to three feet high. ¼Oz. 60cPkt. 10c.

Bonfire. Many strains of *Salvia Splendens* have been offered under different names claiming they are larger flowered or more floriferous than the old type. We have found none more valuable than this strain in which the plant is more uniformly dwarf, and comes into bloom earlier than most sorts. Height of plant about two feet. ¼Oz. 60c.....Pkt. 10c.

Patens. One of the finest blue flowers known; not as well suited for bedding as the other varieties of *salvia*, but very attractive in the mixed border or in the green house. Height of plant, about one and one-half to two feet.....Pkt. 15c.

SCABIOSA—(See *Mourning Bride*)

SCARLET FLAX—(See *Linum*)

Scarlet Runner Beans A rapid growing annual climber, bearing sprays of brilliant scarlet pea shaped blossoms. Used either as a snap or shell bean for eating as well as being desirable for ornamental purposes. Seed may be planted out of doors as soon as danger of frost is past. Vines ten to twelve feet high. Oz. 15c; ¼ Lb. 20c....Pkt. 10c.

Schizanthus Retusus Mixed. Also known as Butterfly Flower or Poor Man's Orchid. Dainty compact branching plants with finely cut foliage, covered when in bloom with clusters or spikes of brilliantly colored butterfly-like flowers. Valuable for garden decoration or pot culture. Petals bright yellow with margins and tube of carmine or purple-rose, shading from lighter to darker shades.

The seed may be sown outdoors after danger of frost is past, where the plants are to remain; or start inside and transplant when weather is suitable. Hardy annual; about twenty inches high.....Pkt. 15c.

Shasta Daisy Splendid perennial plants with large single white flowers with yellow centers. The flowers are borne on very desirable for the hardy border. long stems and are excellent for cutting. The plants produce an abundance of bloom, making them very desirable for the hardy border.

Seed may be sown in the open ground early in spring but better results are usually obtained from sowings made in boxes indoors and plants set out after they have made some growth. Well pulverized soil, preferably light sandy loam should be used and the seed covered one-fourth inch.....Pkt. 10c.

SENSITIVE PLANT—(See *Mimosa Pudica*)

Smilax

(*Myrsiphyllum asparaagoides*) No twining plant in cultivation surpasses this in graceful beauty of foliage. Indispensable to florists for table and house decoration. The hard texture of its small glossy green leaves permits the long delicate sprays of foliage to be kept without wilting several days after being cut.

Planted in spring it makes a fine pot plant for fall and winter. The seed germinates very slowly. The process may be hastened somewhat by soaking the seed in hot water for ten hours before planting, but even then it is often six or eight weeks before the plants make their appearance. Tender perennial climber, ten feet high.....Pkt. 10c.

Snapdragon

(*Antirrhinum*) (*Large Flowering*) This border and bedding plant of long blooming season is one of the best perennials suitable for flowering as an annual. The long showy spikes of curiously shaped tubular flowers with spreading lobes and finely marked throats are fragrant as well as brilliantly colored. They are very desirable for cutting as the spikes of bloom are borne well above the dark glossy leaves and keep fresh for a long time.

For blooms the first season outdoors, sow seed very early under glass and transplant to open border as soon as the ground is warm and dry, in rich loamy soil in a sunny situation, setting one foot apart each way and giving them plenty of water; or sow seed in August or September and cover plants with a mulch on approach of cold weather. These fall-sown plants may be transplanted into pots and flowered in the house, and in this case give them the same temperature and treatment as geraniums and carnations. Tender perennial, often treated as annual or biennial.

Semi-Dwarf Varieties

This class of plants grows about fifteen inches high and are splendid for mass effects in the garden. The stems, while not as long as those of the tall growing sorts, are very desirable as cut flowers for small vases.

Semi-Dwarf Maroon.....	Pkt. 10c
“ “ Pink.....	“ 10c.
“ “ Scarlet.....	“ 10c.
“ “ White.....	“ 10c.
“ “ Yellow.....	“ 10c.

Statice

An easily grown annual which is very desirable for use in rock gardens or as a border plant. The flowers are borne in racemes on long graceful stems and may be cut and dried like everlasting; for this purpose they should be dried in a cool and shady place hung up by the stems to keep their natural shape. Sow the seed indoors during March or April and transplant to open ground after danger of frost is past. They prefer a sunny location and are rather susceptible to an excess of moisture. Height of plants two to two and one-half feet.

Sinuata Mixed. A choice mixture in shades of blue, pink, yellow and white. Oz. 50c.....Pkt. 10c.

STATICE, SINUATA

Stock

(*Mathiola*) Sometimes called Gilliflower. Considered almost indispensable where a fine display of flowers is wanted and particularly valued for edgings, bedding and pot culture. The improved varieties we offer of this favorite garden plant produce dense spikes of very fragrant and beautiful rosette-like double flowers in a wide range of attractive colors. They are suitable for cutting, being produced on stems of good length in pleasing contrast with the dark green foliage of the bushy plants. Each of the two types is of long flowering period and if the earlier ones are started indoors, a profusion of fragrant and pleasing flowers is afforded for the entire season.

Sow outdoors early in spring, using well fertilized, carefully pulverized soil and cover seed with one-fourth inch of fine soil firmly pressed down. Make the rows fifteen inches apart; thin to six inches apart. For earlier blooming start indoors and transplant. Height of plants, one to one and one-half feet.

Mammoth Beauty of Nice

A decidedly superior, large-flowering annual strain with the splendid foliage and bloom of the older type but flowering with the Ten Weeks and decidedly superior in length of stem and size of flower spike. This group is also called Beauty Stocks, Giants of Nice, "Cut and Come Again" and Victoria Stocks.

STOCK, DOUBLE TEN WEEKS

Sunflower

(*Helianthus*) These stately, old-fashioned flowers with the newer improved varieties are coming into special favor as a background for lawns and in front of high fences. Valuable also as a screen to hide unsightly places and sometimes used to mitigate the evil of adjacent swamp holes. Their very tall dense growth and bright yellow disc-like flowers of very large size and long blooming period make them one of the most deserving and useful of hardy annuals.

Sunflowers grow readily in almost any soil but do best on light, rich limestone or alluvial land well supplied with moisture and not shaded by trees or buildings. Sow the seed outdoors in spring after danger of frost is over, preferably in well pulverized soil either broadcast or in rows two to three feet apart and cover about one-half inch deep. When the young plants are about four inches high thin one-half to two feet apart to secure the best development.

Red and Gold. (*Gaillardia Flowered*) A new and very desirable strain of sunflower producing large single flowers which vary in color from deep golden yellow to dull coppery red. Many of the flowers have petals marked like those of *Gaillardia*. The plants are tall and vigorous growing averaging five to seven feet. Oz. 50c.....Pkt. 10c.

Double Golden (*Globosus Fistulosus*) This desirable variety produces very large, globular exceedingly double flowers, often six to eight inches in diameter and of bright yellow color. Petals quilled. The plants are usually about five feet high. Oz. 25c.....Pkt. 10c.

Stella. The plant of this fine Miniature (*cucumerifolius*) variety is spreading with many branches and attains a height of about three feet. The flowers are about three inches in diameter and are of an unusually pure golden yellow with black discs or centers, and are borne on long stems well above the foliage. Early blooming and produced in abundance throughout a long season. Oz. 35c..Pkt. 10c.

SUNFLOWER, RED AND GOLD

SWEET ROCKET—(See *Rocket*)

SWEET PEAS

(*Lathyrus odoratus*) No garden is too small for a row of Sweet Peas and no estate, however extensive or magnificent, should fail to include many varieties of this most popular flower. Its long blooming season usually extends from early summer until very hot dry weather and no other climber equals it for cutting, either for use in bouquets or for table decoration.

In describing floral structure, by the term "standard" is meant the wide petal at the top of the flower; the "wings" are the two petals below.

The **Spencers** are of exceptionally large size, the standard and wings waved or frilled and the general effect remarkably graceful and attractive. The plants are of vigorous growth and remain in bloom for a longer time than the old *Grandiflora* sorts. The Spencers are decidedly shy seeders, hence the price will doubtless always be higher than for the older types.

Culture. Early in spring make a trench three to four inches deep in rich, mellow soil, so arranged that no water can stand in it and plant the seed in the bottom, covering at first only one inch deep. Sweet Peas, particularly the white seeded sorts, are often a little difficult to start. If the soil is too dry they will remain a long time without germinating; if it is too wet and cold they will not sprout at all. In soils at all heavy, or composed largely of clay, put about one inch of sand in the bottom of the trench and sow the seed on this, covering with more sand. Cover the row with a board to shield the rain and protect the soil from the hot sun but remove this as soon as the young plants appear.

When the plants are two inches high, cultivate and as they grow gradually fill up the trench. When the plants are about five inches high it is desirable to furnish some support for the vines to run upon, preferably a wire netting firmly supported by stakes to prevent sagging, but strings or brush are often used with satisfactory results.

The essentials for the largest and most finely formed flowers are as follows:

Planting as early in spring as possible, deep spading or plowing; the placing of manure in the bottom of the trenches to draw the roots downward; a sunny situation with the rows where possible running north and south, the removal in the early stages of growth of all but two branches and thinning the plants to not less than eight inches apart in the rows.

The roots should not be allowed to become too dry. Water applied thoroughly once or twice a week, preferably early in the morning or in the evening, is usually better than light sprinkling more frequently.

If the flower stems become shortened, an application of manure water will aid materially in keeping them long. This should follow a rain or thorough watering. If applied when ground is hot and dry, burning or serious injury will usually result.

The blooms should be picked before they form pods or the plants will soon stop flowering.

Fall Planting. A better growth of vines and earlier blooming often result from planting seed in the fall instead of early spring. If a well drained sandy soil is selected this method may usually be depended upon to give satisfactory results even in the Northern states.

Preparation of the soil is the same as that for spring planting. The seeds should be sown about an inch or two apart in rows about three inches deep, and firmly covered with soil which should be somewhat ridged above the rows to improve drainage. The most important point in fall planting of Sweet Peas is to plant late enough so that plants will not appear above the surface of the soil before freezing weather sets in. Plantings are usually made in the latitude of Detroit from the 1st to the 15th of November. After the ground freezes the rows should be covered with a mulch of litter or manure. Upon approach of warm weather in the spring the rows should be examined and if plants have started the mulch may be removed either wholly or in part, leaving it between the rows or near at hand so that it may be replaced in case of a cold wave or sudden change of temperature.

For the aphid or plant louse, spraying with solutions of some tobacco extract or whale-oil soap is usually effective; and for the Red Spider, which also causes trouble at times, spraying with pure water is usually sufficient. A frequent change of location has also been found important.

Especial attention is directed to the desirability of the **Early Flowering Spencers** for early outdoor planting. In localities where the hot sun of early summer makes it difficult to obtain satisfactory results with the Late Spencers, it will prove of advantage to plant the Early Flowering sorts. The flowering date of this class is so much earlier that they will produce an abundance of good blooms before being checked by the heat.

A full assortment of colors is now available in this class, either through the selection of the named varieties we offer or in the use of our Early Flowering Spencers Mixed. If the results you have had with the later sorts have been disappointing, we suggest that you give these a trial. **One ounce of seed is sufficient to plant a single row of 50 feet.**

EARLY FLOWERING SPENCER VARIETIES

A comparatively new class of Sweet Peas that is rapidly becoming very popular for winter flowering indoors. The flowers are large, of the same form as the Spencers and are beautifully waved or frilled. They remain in bloom for a much longer time than the Early Flowering *Grandiflora* sorts. When planted out of doors they will commence blooming a month or more earlier than the later flowering varieties planted at the same time.

- EARLY AVIATOR.** Brilliant crimson flowers of large size and fine form. Sunproof. Pkt. 10c; Oz. 60c; ¼ Lb. \$1.75
- EARLY BLANCHE FERRY.** An attractive bicolor with rose pink standard and wings white or slightly tinged with pink. Similar to the well known late flowering Blanche Ferry. Pkt. 10c; Oz. 60c; ¼ Lb. \$1.75
- EARLY BLUE BIRD.** A very attractive shade of bright silvery blue. Flowers become somewhat flaked with a deeper shade of blue as they age. Pkt. 10c; Oz. 60c; ¼ Lb. \$1.75
- EARLY COLUMBIA.** Standard rose pink, wings creamy white tinged with pink. Pkt. 10c; Oz. 60c; ¼ Lb. \$1.75
- EARLY ELDORADO.** Ruddy orange with wings of softer shade. Pkt. 10c; Oz. 90c; 2 Oz. \$1.50
- EARLY GLITTERS.** Fiery orange-scarlet with wings of a deeper shade. Unsurpassed in brilliancy of color when used under artificial light. Pkt. 10c; Oz. 60c; ¼ Lb. \$1.75
- EARLY HARMONY.** A pleasing shade of lavender. Flowers of large size and borne on long stems. Pkt. 10c; Oz. 60c; ¼ Lb. \$1.75
- EARLY SNOW FLAKE.** An early flowering white variety of distinctive merit. The blossoms are large, of the best Spencer form and are borne in profusion on long stems. Pkt. 10c; Oz. 60c; ¼ Lb. \$1.75
- EARLY SPRINGSONG.** Warm rose pink tinged with salmon. Flowers large and of fine form. This is a new variety of extraordinary beauty. Pkt. 10c; Oz. 90c; 2 Oz. \$1.50
- EARLY SUPERIOR PINK.** Clear pink flowers of extra size. Pkt. 10c; Oz. 60c; ¼ Lb. \$1.75
- EARLY VULCAN.** Intense scarlet red, perfectly sunproof. Produces freely on long stems. Pkt. 10c; Oz. 75c; ¼ Lb. \$2.00
- EARLY WHITE HARMONY.** A new variety of special merit. Flowers are very large and of splendid substance. Pure white, becoming slightly flushed with bluish pink or lavender when past their prime. Pkt. 10c; Oz. 75c; ¼ Lb. \$2.00
- EARLY ZVOLANEK'S ROSE.** Rich rose pink. The flowers are large and are produced on stems of good length. Pkt. 10c; Oz. 60c; ¼ Lb. \$1.75
- EARLY FLOWERING SPENCERS MIXED.** A choice mixture of the aforementioned Early Flowering Spencer varieties. Pkt. 10c; Oz. 50c; ¼ Lb. \$1.50

SWEET PEAS—Continued

SPENCER VARIETIES

This group includes the largest and most beautifully formed sweet peas. The Spencers have very large waved flowers which are produced abundantly on long strong stems, making the blossoms most desirable for cutting.

The plants of Spencer varieties when grown outdoors are usually in bloom much longer than other sweet peas, as most of the blossoms fall off after maturity without setting pods. A characteristic of the best Spencers is an "open keel." The petal or envelope enclosing the pistil, stamens and anthers is called the keel. In a typical Spencer flower grown under favorable conditions the anthers and stigma are not clamped together and the envelope of the keel is large and baggy and open at the top.

Bicolor

BLANCHE FERRY. This is similar in color to the original grandiflora Blanche Ferry; standard rose-pink, wings white. Our strain is comparatively free from the tinting which usually occurs in the wings of most bicolors but the flowers will have more sharply contrasting colors if not exposed to over-much direct sunlight. Pkt. 10c; Oz. 30c; ¼ Lb. 90c

DORA. Bright rose standard with wings of very light primrose, flushed or tinted rose-carmine. Very large Spencer form. Flowers are brighter and have more sharply contrasting colors if given some protection against too much hot sun. Pkt. 10c; Oz. 30c; ¼ Lb. 90c

Blue, Light

GLENEAGLES. Flowers of distinct rounded form, beautifully waved with daintily frilled edges. Color lavender-blue, slightly deeper at center. Pkt. 10c; Oz. 60c; ¼ Lb. \$1.75

MRS. TOM JONES. Clear wistaria-blue. Flowers are large, of fine substance and sunproof. One of the very best. Pkt. 10c; Oz. 30c; ¼ Lb. 90c

REFLECTION. The flowers are well waved, set on long stems, and of a clear cornflower blue. This variety was introduced only a year ago and it is already the leader of its color class. Pkt. 15c

Blue, Dark

FORTUNE. Dusky violet-blue. Flowers are large, waved and of fine form. A most striking variety, especially when used in combination with the lighter colors. Pkt. 10c; Oz. 60c; ¼ Lb. \$1.75

Carmine Rose

DOREEN. Carmine rose flowers of extra large size and beautifully waved petals. Pkt. 10c; Oz. 30c; ¼ Lb. 90c

ROSABELLE. A very rich bright rose. Large flowers, beautifully waved and fluted. Pkt. 10c; Oz. 30c; ¼ Lb. 90c

Cream

DOBBIE'S CREAM. A strong growing cream or ivory. Very profuse blooming with flowers often duplexed. Pkt. 10c; Oz. 30c; ¼ Lb. 90c

Crimson

CRIMSON KING. Deep, glossy crimson. Flowers large and perfectly placed on long, strong stems. Vigorous growing, a profuse bloomer and entirely free from sunburn or wind scald. Probably the most satisfactory red sweet pea for general outdoor culture. Pkt. 10c; Oz. 30c; ¼ Lb. 90c

KING EDWARD. Rich and brilliant crimson. A vigorous grower, producing flowers of large size and beautiful form. Pkt. 10c; Oz. 30c; ¼ Lb. 90c

Lavender

AUSTIN FREDERICK. Our stock is of the improved strain. Flowers of largest size, well placed on long stems. Color a true lavender, the best yet introduced. Pkt. 10c; Oz. 30c; ¼ Lb. 90c

Maroon

WARRIOR. The best pure deep maroon. Large flowers of splendid form. Pkt. 10c; Oz. 30c; ¼ Lb. 90c

Orange

MAMMOTH. Brilliant orange-scarlet of large size, the standard showing more orange than the wings. Vigorous and very free blooming. Pkt. 10c; Oz. 30c; ¼ Lb. 90c

Picotee

YOUTH. Clear waxy white with well defined pink edge. Flushes rose-pink when over-exposed to the hot sun but produces large, handsome blooms even when conditions are not entirely favorable. Delightfully fragrant. Pkt. 10c; Oz. 40c; ¼ Lb. \$1.25

Pink, Pale

ELFRIDA PEARSON. White ground flushed with pink, tinged with bronze when first opening. Free flowering and strong growing. Pkt. 10c; Oz. 30c; ¼ Lb. 90c

WINNIE MORSE. Flowers are exceptionally large, delightfully frilled, and usually duplexed. The color is cream ground

SWEET PEA, MAMMOTH

lightly flushed with soft rose pink. A new sweet pea of almost breath-taking loveliness. Pkt. 15c

VALENTINE. A recently introduced charming blush pink variety. The flowers are well formed, of largest size and are well placed in fours on long strong stems. Pkt. 10c; Oz. 30c; ¼ Lb. \$1.00

Pink, Cream

MARY PICKFORD. A dainty cream pink with a faint suffusion of salmon. Flowers exceptionally large with both standards and wings beautifully waved. Strong growing and free flowering. Pkt. 10c; Oz. 30c; ¼ Lb. 90c

MISS CALIFORNIA. A rich cream pink variety with large beautifully waved flowers which are borne in fours on long stout stems. Pkt. 10c; Oz. 30c; ¼ Lb. 90c

SWEET PEAS—Continued

SPENCER VARIETIES—Continued

Pink, Cream

PICTURE. Flowers well waved and frilled. Standard cream with tint of primrose. Wings and keel cream, suffused with soft pink. A most attractive sweet pea. **Pkt. 10c; Oz. 30c; ¼ Lb. 90c**

Pink, Deep

HAWLMARK PINK. Color deep rose pink at margin of petals and standard, but shades lighter toward the center of the flower. Flowers large and borne on long strong stems. One of the most beautiful pink sweet peas yet introduced. **Pkt. 10c; Oz. 30c; ¼ Lb. 90c**

PINKIE. Huge flowers, deep rose-pink. There are many good rose-pink sweet peas and we consider Pinkie the best of the lot. **Pkt. 10c**

Pink, Salmon

ILLUMINATOR. Glowing salmon pink. Very satisfactory under artificial light. **Pkt. 10c; Oz. 30c; ¼ Lb. 90c**

CHARMING. Somewhat deeper in color than Illuminator and equally brilliant. Flowers open true and hold color well. **Pkt. 10c; Oz. 35c; ¼ Lb. \$1.00**

Purple

ROYAL PURPLE. The color deepens as the flower ages which is a desirable quality in a purple variety. The best purple sweet pea. **Pkt. 10c; Oz. 30c; ¼ Lb. 90c**

Salmon

TANGERINE IMPROVED. A deep metallic salmon suffused with orange. A beautiful Spencer, especially in artificial light. This should be given some protection from hot sun to bring out its true color. **Pkt. 10c; Oz. 30c; ¼ Lb. 90c**

Scarlet

ALL BRIGHT. A 1930 novelty which sets a new standard for scarlet sweet peas. The vividly colored flowers are richly frilled, sometimes duplexed, and usually set in fours on long stems. **Pkt. 25c**

CAMPFIRE. Vivid scarlet. Flowers are large, well formed and withstand the sun exceptionally well. **Pkt. 10c; Oz. 35c; ¼ Lb. \$1.00**

ROYAL SCOT. Intensely brilliant scarlet or spectrum red. A vigorous grower, producing large, finely waved flowers. **Pkt. 10c; Oz. 30c; ¼ Lb. 90c**

SUNPROOF SCARLET. Deep scarlet red. Vigorous in habit and with large waved flowers which are practically sunproof. **Pkt. 10c; Oz. 30c; ¼ Lb. 90c**

Striped and Flaked

SENATOR. Chocolate and brown striped and splashed on light ground. Large size and good form. **Pkt. 10c; Oz. 30c; ¼ Lb. 90c**

White

KING WHITE. The form, size, vigor, waviness and purity of color, give pre-eminence to its claim as the best white Spencer yet introduced. Seed white. **Pkt. 10c; Oz. 30c; ¼ Lb. 90c**

CONSTANCE HINTON. Flowers open blush but change to almost pure white. Of largest size, splendid form and superior substance. Seed black. **Pkt. 10c; Oz. 30c; ¼ Lb. 90c**

SWEET PEA, MISS CALIFORNIA

MIXTURES OF SWEET PEAS

Most people obtain more satisfaction from planting Sweet Peas in mixture than from growing named sorts, but to be successful it is necessary that the seed be of the best quality obtainable. Often what is offered as mixed seed is stock harvested from plants that have come up as volunteers on ground where Sweet Peas have been grown before, or a lot of seed which has been grown, saved or handled so carelessly that it cannot be sold as any distinct variety. The use of such seeds will not give satisfactory results. We assure our customers the Mixtures of Sweet Peas which we offer are the results of as great care in selecting as any stocks we grow and as fine flowers are obtained from them as from any seed that can be bought. We invite comparison with any and all others, no matter under what name or at how high prices offered and are certain that a trial will demonstrate the superiority of our mixtures.

Early Flowering Spencers Mixed A well balanced blend of the colors included in the Spring Flowering class. Our stock will produce flowers of all the desirable shades and is especially recommended for planting in localities where hot weather comes early. **Pkt. 10c; Oz. 50c; ¼ Lb. \$1.50**

Spencers Mixed A splendid mixture of Spencer varieties grown for us by the most careful methods from proven stocks. A wide range of colors is thus assured in this comparatively new class of Sweet Peas of such remarkably large size and wonderfully attractive form. **Pkt. 10c; Oz. 20c; ¼ Lb. 55c; Lb. \$1.50**

Ferry's Superb Spencers Mixed We make up this magnificent mixture by combining eighteen separate named Spencer varieties, each of which our trials have repeatedly shown to be the very best of its class. Unsurpassed as a mixture of this superb class and showing the most desirable range of colors and the finest forms. No better mixture in all the world than this. **Pkt. 10c; Oz. 25c; ¼ Lb. 65c; Lb. \$2.00**

Sweet William

(*Dianthus barbatus*) A well known, extensively used, sweet scented perennial for bedding and borders, forming fine clumps in any good garden soil and under proper conditions lasting for several seasons. They produce a succession of flower clusters, thus affording splendid bloom for several weeks. The florets are handsomely colored and marked and are borne on stiff stems in great profusion, forming dense round topped heads or clusters, often three to four inches across. The colors are exceedingly varied, ranging from white through many shades of rose, lilac, red, carmine, crimson and maroon to nearly black, usually two shades to each plant.

Sow outdoors very early in spring, preferably in rich, mellow soil, in rows one foot apart. Cover seed with one-fourth inch of fine soil firmly pressed down. When two inches high, thin to six inches apart. In the more northerly latitudes, protect with mulching in winter. Seed can also be sown in fall. There are usually no flowers until the second season, but if seed is started very early under glass and transplanted, blooms may be had late in autumn. The old clumps may be divided but it is usually more satisfactory to start vigorous young plants every year or two. Hardy perennial; one and one-half feet high.

Newport Pink. A beautiful shade of Begonia rose. Very effective in mass beds and also very desirable for cutting. The flower trusses are exceptionally large and are produced on stems about 18 inches high. **Pkt. 10c.**

Velvety Maroon. Flowers velvety dark maroon; very desirable on account of its rich, deep color. Oz. 50c. **" 10c.**

White, pure. Beautiful white flowers, sometimes faintly marked about the eye. Oz. 50c. **" 10c.**

Fine Mixed. This mixture will be found especially satisfactory. Oz. 40c. **" 10c.**

Double Mixed. Double flowers in a great variety of colors and shades. Oz. 60c. **" 10c.**

TAGETES—(See *Marigold*)

Texas Blue Bonnet

(*Lupinus Terensis*) A dwarf growing plant, ten to twelve inches tall. The distinctive, small, palm-like leaves and spikes of blue and white pea-shaped flowers make this attractive for low borders, also desirable for window boxes and pot culture. For early blooming in spring, plants should be started indoors and transplanted to open bed as soon as ground can be made ready. Seed may be sown out of doors as early as ground can be worked or it may be planted in the fall. For indoor planting or for spring planting out of doors, the seed should be soaked in water for twenty-four hours, or chipped, to hasten germination as the seed coat is very hard. Oz. 40c. **Pkt. 10c.**

TROPÆOLUM LOBBIANUM—(See *Nasturtium, Trailing*)

TROPÆOLUM CANARIENSE—(See *Canary Bird Flower*)

TROPÆOLUM MINOR—(See *Nasturtium, Dwarf*)

Verbena

This well known annual of low growing decumbent habit of growth is very desirable for massing in beds on the lawn. It is suitable also for borders and window boxes.

Verbenas usually flower well in August from seed sown in open ground in May. Germination will be hastened if the seed is soaked in lukewarm water before planting. It is desirable to have the soil well fertilized and carefully pulverized. Cover seed about one-fourth inch deep. When the young plants have three or four leaves transplant in rows two feet apart and about twenty-four inches apart in the row, choosing preferably a sunny situation. At this distance the plants, if conditions are favorable, will spread so as to cover the ground completely.

Earlier blooming may be had if plants are started indoors and transplanted in the open ground after danger of killing frost is over. Half hardy perennial trailer, one foot high, usually treated as an annual.

Hybrida Scarlet. May be relied upon to produce the true, deep scarlet color. No variety gives a more brilliant effect when used as a bedding plant. Oz. \$1.50. **Pkt. 10c.**

Hybrida Dark Blue. Oz. \$1.50. **" 10c.**

" Pink. Oz. \$2.00. **" 10c.**

" White. Produces large, pure white flowers; very floriferous, fine for florists; comes true from seed. Oz. \$1.50. **Pkt. 10c.**

Hybrida Italian Striped. A strikingly attractive and beautiful sort, producing large, brilliant, striped blossoms in great abundance. Oz. \$2.00. **Pkt. 10c.**

Hybrida Fine Mixed. This extra choice mixture includes a wide range of very beautiful colors, shades and stripes usually running from pure white to deep purple. The clusters are of largest size. Oz. \$1.00. **Pkt. 10c.**

Vinca

(*Periwinkle*) These very attractive bushy plants with glossy green foliage produce in abundance handsome round or salver shaped single flowers, suitable either for culture in pots or boxes or

for summer bedding and borders. If sown early under glass and transplanted in a warm, sheltered situation will bloom in summer and autumn and may be potted for the house before frost. The plants require no trimming, are in continuous bloom from setting out until frost and are entirely free from the attacks of insects. These desirable features account for the increasing demand for Vincas in parks and private grounds for summer bedding and borders. Tender perennial, blooming the first season, about fifteen inches high.

Pure White. Beautiful pure white. Oz. \$1.00. **Pkt. 10c.**

Rosea Alba. White with crimson eye. Oz. \$1.00. **" 10c.**

VIOLA TRICOLOR—(See *Pansy*)

VINCA

Rosea. Rose with crimson eye; flowers often two inches in diameter. A very desirable window plant. Oz. \$1.00. **Pkt. 10c.**

Mixed. The foregoing named varieties mixed. Oz. 80c **" 10c.**

Wallflower

(*Cheiranthus cheiri*) This is a favorite European garden flower. The long, fragrant terminal spikes of the Wallflower when properly grown are very conspicuous in beds and borders and are very useful in making bouquets.

Sow seed early in hotbed and while plants are small prick them out into pots and sink in the earth. On approach of cold weather remove the pots to the house and the plants will bloom all winter. Tender bushy biennial or perennial that will live through the winter in a mild climate; height of plants about one and one-half feet.

Early Brown. Brownish-red, fragrant single flowers; large, thick spikes; early. Tender biennial. **Pkt. 10c.**

Double Mixed. Deliciously fragrant, perfectly double, and combine many shades of color, the orange, purple and chocolate predominating. **Pkt. 10c.**

Wistaria Chinensis

One of the most beautiful and rapid growing of the hardy perennial climbers. When well established in good soil it will often grow fifteen to twenty feet during the season and frequently blooms both in spring and fall. The flowers are very fragrant, single, pale blue, peashaped and are borne in long, drooping grape-like clusters, often over a foot in length. Foliage light green, pinnate. The seed should be sown in mellow loam early in the spring, or in greenhouse or hotbed in winter and when plants are one foot high transplanted into permanent situations. **Pkt. 20c.**

WOOLFLOWER (See *Celosia Childsi*)

DOUBLE GIANT ZINNIA

Zinnia

Sometimes called Youth and Old Age. The well known bush-like plants of Zinnias produce a profusion of large double imbricated flowers, borne on stiff stems. They are much used for bedding and are suitable for borders and for cutting.

There is much satisfaction in a bed of Zinnias with their twisted and recurved petalled flowers in many bright colors, and when nearly every other flower has been killed by frost this plant is still in full bloom. Few flowers are more easily grown or bloom more abundantly throughout the season, and the wide range of color is not less remarkable than their unusual depth and richness.

Sow the seed early in spring, in open ground in good rich soil, preferably in rows one and one-half feet apart and covering about one-fourth inch deep. When the young plants are one to two inches high thin to six inches apart. Start under glass for earlier blooming. Half hardy annual; tall growing, usually about one and one-half to two feet high.

Giant Double An improved strain which produces immense double flowers 3 to 4 inches in diameter in an extremely wide range of colors. The plants are hardy, of very vigorous growth, often 3 feet high, and remain in bloom from early summer until killed by severe frost. (See further description on page 9.)

Giant Double Canary Yellow. Oz. \$1.00.....	Pkt. 10c.	Giant Double Purple (Several Shades). Oz. \$1.00..	Pkt. 10c.
" " Crimson. Oz. \$1.00.....	" 10c.	" " Scarlet. Oz. \$1.00.....	" 10c.
" " Orange. Oz. \$1.00.....	" 10c.	" " White. Oz. \$1.00.....	" 10c.
" " Pink. Oz. \$1.00.....	" 10c.	" " Mixed—A choice mixture of the above shades	
		and colors. Oz. 80c.....	Pkt. 10c.

Double Quilled Mixed. A very attractive and distinct type with tubular or quilled petals which give the flowers the appearance of a cactus dahlia. The colors range through the softer shades of yellow and orange to russet. Oz. \$1.50.....**Pkt. 10c.**

Dahlia Flowered Mixed. This new giant flowered type has petals which overlap in such a manner as to give the flowers the appearance of a decorative dahlia. The flowers, although not so brilliant in color as those of the older type, are many of them in exquisite shades of rose, lavender and old gold. The plants are strong and vigorous growing and produce an abundance of blooms throughout the summer and early fall. Oz. \$1.50.....**Pkt. 10c.**

Lilliput Double Mixed. This strain grows about one foot high and bears a profusion of comparatively small, very double, globular flowers about one inch in diameter, very brilliant in color. Oz. 90c.....**Pkt. 10c.**

Mexicana Double Orange. Dwarf variety with double flowers of a deep orange color, about one and one-quarter inches in diameter; fine for cut flowers; height one foot. Oz. \$1.00.....**Pkt. 10c.**

Mexicana Single Gypsy Girl. Distinctive in its well-formed single flowers of deep maroon and golden yellow strikingly contrasted. The flowers are similar to those of French Legion of Honor Marigold, but are earlier and more easily grown. Hardy annual; one foot high. Oz. \$1.50.....**Pkt. 15c.**

BULBS AND ROOTS

FOR SPRING PLANTING

Included in this class are some of our most showy garden flowers and their culture is very easy. In the spring, after danger from frost is over, plant in a rich, loamy soil, having a sunny position and flowers the same season are assured.

All bulbs and roots will be sent by mail or express, charges prepaid, when ordered at single or per 10 rates. At the 100 rate they will be sent by express or freight, the purchaser paying the charges unless otherwise stated. Not less than five of any one variety supplied at ten rates and not less than 25 at the 100 rate. Orders with money should be sent to us as early as possible and they will be filled in rotation. Bulbs subject to injury by frost will not be sent until such danger is over.

Dahlia

There are few flowers that compare with the Dahlia in charming diversity of form and wide range of brilliant colors, and certainly no other surpasses it for autumn display in the garden as well as for cutting.

The "Decorative" types are characterized by gracefully formed flowers of large size with broad petals, being intermediate in form between the compact "Show" sorts which are nearly round and the "Cactus" varieties which have loosely formed blossoms with long twisted petals.

The roots are tender and easily injured by frost. They should be set out three feet apart, after all danger of frost is over. The best blooms are sometimes obtained if planting is deferred until about June 1. The soil should be deeply dug and well drained but only moderately enriched with thoroughly rotted barnyard manure. A stiff clay should be avoided. A sunny situation is desirable as well as plenty of space and air. Place the roots horizontally, covering two to three inches deep. Give thorough cultivation and during dry weather water well once a week. In order to secure the largest blooms, it is the common practice to remove the side shoots and lateral buds, leaving a single flower to a stem. Dahlias usually do not require much fertilizer and fresh barnyard manure especially should not be used. The plants should be supported by tying to stakes. The roots should be placed during winter in a cool cellar but not allowed to freeze.

Decorative Type

Alex Waldie. Large cream colored flowers overlaid with delicate salmon-pink. One of the most beautiful dahlias, on good long stems. 75c each; \$6.00 per 10.

Champagne. One of the largest of its class. A new and distinct color, being best described as golden champagne with chamois shading. A model for shape and very free flowering, 75c each; \$6.00 per 10.

Chas. Stratton. Pale gold shaded and tipped with old rose. Especially desirable for its large size and artistic coloring. Strong healthy grower. \$1.00 each; \$7.50 per 10.

Dr. Tevis. Flowers a beautiful shade of soft salmon rose suffused with old gold. Very attractive form. 50c each; \$4.00 per 10.

Fireburst. Brilliant scarlet red flowers borne on stems of good length for cutting. 25c each; \$2.00 per 10.

Frau G. Scheiff. Color a rich blending of apricot, orange and yellow, with reverse of petals coral red. The flowers freely produced on long-erect stems. 50c each; \$4.00 per 10.

Gertrude Manda. Peach colored flowers of large size. Very desirable flowers. 25c each; \$2.00 per 10.

Giant Ruby. A very vigorous growing dahlia producing superbly large flowers of rich ruby red on good stems. A consistent winner of "Firsts" for three years. \$1.00 each; \$7.50 per 10.

Jersey's Beauty. Has been a consistent leader at the eastern Dahlia shows for the past three years. A true, pure pink of extra size and depth on long stiff stems. A recent introduction of great merit. 75c each; \$6.00 per 10.

Joseph Manda. A fine dark red. 50c each; \$4.00 per 10.

Judge Alton B. Parker. Dark burnt orange and buff. Extra large flowers on bushes of medium height. 50c each; \$4.00 per 10.

Judge Marean. A pleasing shade of cream heavily suffused with pink. An early and profuse bloomer of perfect form. 75c each; \$6.00 per 10.

Le Toreador. A very free blooming crimson on long wiry stem. An excellent keeper. 50c each; \$4.00 per 10.

Mrs. Carl Salbach. Solferino-pink suffused with white. Very desirable for cutting. 50c each; \$4.00 per 10.

Mrs. C. H. Dresselhuys. A very dainty dahlia. Medium in size with petals slightly curled at ends; color an exquisite shade of true pink. Good stems for cutting. 35c each; \$3.00 per 10.

Mrs. Forbush. Rich purple garnet shaded with maroon. 25c each; \$2.25 per 10.

Mrs. I. de Ver Werner. The flowers are large, of perfect form on long stiff stems. Produces masses of blooms which are a refined mauve-pink in color. Ideal for cutting. 50c each; \$4.00 per 10.

Myra Valentine. Large golden-bronze flowers on long stiff stems. A consistent prize winner in its class. 75c each; \$6.00 per 10.

Oregon Beauty. Intense glowing red suffused with orange and garnet. A free bloomer with long stiff stems. One of the best. 35c each; \$3.00 per 10.

DAHLIA, DECORATIVE TYPE

Not less than 5 of any one variety supplied at the 10 rate and not less than 25 at the 100 rate

DAHLIA—Continued

Decorative Type—Continued

- Patrick O'Mara.** The flowers, borne on long stiff stems, are of perfect form and of rich chrome-yellow suffused with red. **50c each; \$4.00 per 10.**
- Paul Michael.** Color pure gold, shaded orange buff at center. Petals quilled at base, curled and twisted toward tip. Of exceptionally large size. **\$1.00 each; \$7.50 per 10.**
- Porthos.** Rich crimson flowers of extra large size on long stems. A very free bloomer. **50c each; \$4.00 per 10.**
- Pride of Wayne.** A plum colored flower of the largest size. Very free blooming, medium sized plants, with an extra long flowering season. **75c each; \$6.00 per 10.**
- Princess Juliana.** An early blooming white. Equally desirable for cutting or garden decoration. **25c each; \$2.00 per 10.**
- Purity.** One of the very best of the pure whites. The artistically arranged petals give the large flowers a full, fluffy appearance. **25c each; \$2.00 per 10.**
- Rosa Nell.** Bright rose color, large and well formed on very good stem. One of the most satisfactory dahlias of recent years. **50c each; \$4.00 per 10.**
- Sagamore.** A rich amber-gold, elusively shaded toward center with warm salmon-rose. Extra large, perfectly formed flowers. Strong and healthy. **\$1.00 each; \$7.50 per 10.**
- Sanhican Gem.** An attractive shade of old rose thickly suffused with amber. At maturity it is a clear old rose with a glistening sheen. **\$1.00 each; \$7.50 per 10.**
- Tommy Atkins.** An intense spectrum red as showy as the color of the British soldiers' tunics. Flowers of good size and form on excellent stems. **\$1.00 each; \$7.50 per 10.**
- Venus.** Large flowers produced on strong, stiff stems. Color a creamy white with lavender suffusion. Excellent for cutting. **50c each; \$4.00 per 10.**
- Yellow Colosse.** Gigantic flowers of pure primrose yellow. **35c each; \$3.00 per 10.**

Show Type

- Arabella.** Light sulphur yellow shaded with primrose. **25c each; \$2.00 per 10.**
- Dorothy Peacock.** Large, perfectly shaped flowers of bright shell pink color. Early and free flowering. **25c each; \$2.00 per 10.**
- Dr. Kirkland.** Dark crimson. Flowers very large and full. **25c each; \$2.00 per 10.**
- Maude Adams.** White overlaid with delicate pink. An excellent variety for all purposes. **25c each; \$2.00 per 10.**
- Royal Purple.** Rich deep purple. Flowers only of medium size but are abundantly produced. **25c each; \$2.00 per 10.**
- Yellow Duke.** A vigorous grower with large, clear canary yellow flowers; quilled petals. **25c each; \$2.00 per 10.**

Hybrid Cactus Type

- Attraction.** Lilac rose; petals beautifully curled. **50c each; \$4.00 per 10.**
- Daddy Butler.** Color, American Beauty Rose or rosy carmine. Reverse of petals lighter, giving a variation in tone. Free blooming and of the best type for exhibition. **75c each; \$6.00 per 10.**
- E. R. Holmes.** Large graceful flowers on fine stems. The color is a most pleasing orchid-lavender. **75c each; \$6.00 per 10.**
- Gay Paree.** Golden bronze with a faint tint of orange red. One of the most satisfactory varieties yet introduced. Flowers of the largest size and of splendid form. **75c each; \$6.00 per 10.**
- George Walters.** The large flowers which are a pleasing shade of salmon are borne on long stems well above the foliage. **50c each; \$4.00 per 10.**
- Kalif.** Color a pure scarlet. Flowers of largest size. **50c each; \$4.00 per 10.**
- Mariposa.** A very attractive lavender pink. Perfect in form on good long stems. **75c each; \$6.00 per 10.**
- Nichu.** True in form and a pleasing clear lemon yellow. Stems wiry and of good length. Bush comparatively short and stocky with fine foliage. **\$1.00 each; \$7.50 per 10.**
- Wodan.** Delicate salmon-rose, shading to old-gold in the center. Large, very attractive form. **50c each; \$4.00 per 10.**

Cactus Type

- Ballet Girl.** Variegated orange or deep salmon and white. Many different combinations of these colors on the same plant. **75c each; \$6.00 per 10.**
- Brides Bouquet.** A pure white of good form and size. It has fine stems and keeps well as a cut flower. **35c each; \$3.00 per 10.**
- Countess of Lonsdale.** Apricot shaded salmon-red. An early, very attractive Cactus variety. **35c each; \$3.00 per 10.**

- Entandard de Lyon.** Beautiful carmine rose. Flowers of the largest size with broad waved petals. **35c each; \$3.00 per 10.**
- Marguerite Bouchon.** Soft rose with white tips and center; straight petals. Medium size but of perfect form and habit. A universal favorite. **50c each; \$4.50 per 10.**
- Mrs. Chas. Turner.** Free blooming, pure yellow, of fair size on good stems. **25c each; \$2.00 per 10.**

Peony Type

- Queen Wilhelmina.** Large fluffy flowers of pure white with yellow center. A long stemmed variety, especially attractive in bouquets. **35c each; \$3.00 per 10.**
- Red Cross.** One of the finest new introductions. Bronze shaded red. **50c each; \$4.00 per 10.**
- U. S. A.** A most distinctly colored dahlia, being a rich golden yellow with a tint of old rose. Early and remarkably free flowering with good stems. **\$1.00 each; \$7.50 per 10.**

Pompom Dahlias

These short, bushy dahlias with their profuse, small, ball-shaped flowers are very useful for borders and are much used for table decoration. The flowers are very symmetrical and the shades of color soft and attractive. They continue in bloom until killing frosts and their presence in the garden helps to replace the loss of earlier kinds of flowers which have ceased to bloom. We are offering a selected list of varieties which will be found especially desirable. Culture the same as for other dahlias.

- Catherine.** Clear canary yellow. **25c each; \$2.00 per 10.**
- Madeline.** Pale primrose, edged with rosy purple. **25c each; \$2.00 per 10.**
- Rose Bud.** Clear shell pink. Very dainty. **25c each; \$2.00 per 10.**
- Snowbird.** Pure white, compact form. **25c each; \$2.00 per 10.**
- Tommy Keith.** Cardinal red, tipped with white. **25c each; \$2.00 per 10.**

HYBRID CACTUS DAHLIA, GEORGE WALTERS

Not less than 5 of any one variety supplied at the 10 rate and not less than 25 at the 100 rate

GLADIOLUS

The Gladiolus is one of the most decorative plants in the garden, and as a cut flower lends itself readily to any arrangement. If the spikes are cut when the lowest flower is in bloom, the others will open in succession and remain fresh a week or ten days. No flower has gained more rapidly in public favor than the Gladiolus; this could not well be otherwise, for in addition to the great intrinsic merit of the flower, it is hardy and blooms the first season from bulbs.

Gladioli will thrive in almost any good soil except a stiff clay. They require full sunlight and are liable to injury only from rank manure. Plant the bulbs six to nine inches apart, the large ones four inches and the small ones two inches deep. Make an early planting of the smallest bulbs first as soon as the ground is sufficiently dry and warm. Continue to plant at intervals of two weeks during the spring and early summer; in this way a succession of bloom may be had from midsummer until frost. A free use of water during the season of active growth and particularly as the buds begin to show color will be beneficial in producing fine blossoms. In the autumn, before freezing, they should be dug up and the tops allowed to dry down, after which the dry tops, earth and old bulbs can be removed. Store in a cool, dry place, secure from frost until spring.

- Albania.** Pure snow white, large open flowers with beautiful round petals. **10c each; 80c per 10; \$6.50 per 100.**
- America.** Very light pink, exquisitely tinted with lavender. Much valued for freedom of bloom and size of flower spike. **7c each; 50c per 10; \$3.50 per 100.**
- Baron Hulot.** Flowers dark velvety purple. One of the very best so-called blues. **13c each; \$1.10 per 10; \$9.00 per 100.**
- Captain Boynton.** A beautiful shade of lavender with violet purple blotch on lower petals. The flowers are perfectly placed on tall strong stems. A good early forcer. **16c each; \$1.40 per 10; \$12.00 per 100.**
- Carmen Sylva.** Snow white; largest flowers of any of whites. Stems perfectly straight and tall. An extra good variety for cut flowers. **11c each; 90c per 10; \$7.00 per 100.**
- Chateau Thierry.** Orange-cerise with red blotch having a yellow border on lower petals; tall spike with open, well formed flowers. **9c each; 70c per 10; \$5.50 per 100.**
- Crimson Glow.** Glowing velvety crimson shading to deeper color at center. Tall, strong grower with flowers well placed. Considered by many the best in its color. **9c each; 70c per 10; \$5.50 per 100.**
- Early Sunrise.** A very early variety; deep orange-salmon with yellowish blotch on lower petals. An excellent florist's variety and a good forcer. **10c each; 80c per 10; \$6.50 per 100.**
- E. J. Shaylor.** Tall, vigorous growing plants, with large flowers of clear, deep rose pink color. **9c each; 70c per 10; \$5.00 per 100.**
- Evelyn Kirtland.** Shell pink at center shading to very warm rose-pink and deeper at edges of petals. Brilliant scarlet blotches on lower petals. Has strong stem and is very desirable for cutting. **9c each; 70c per 10; \$5.50 per 100.**
- Giant Nymph.** Light rose-pink with creamy-yellow throat, very large open flowers well arranged on long stems. One of the tallest. **11c each; 90c per 10; \$7.00 per 100.**
- Golden Measure.** Very large, golden-yellow flowers of fine substance; strong, vigorous grower and considered by many the best yellow on the market. **15c each; \$1.25 per 10; \$11.00 per 100.**
- Halley.** Salmon pink with a slight tinge of rose. Creamy blotch on lower petals with bright red stripe through center. One of the most popular sorts. **7c each; 50c per 10; \$3.50 per 100.**
- Hereda.** Flowers of largest size on tall, straight spikes. Pure glistening mauve with darker markings in throat. **9c each; 70c per 10; \$5.00 per 100.**
- Jack London.** Light salmon with vermilion stripes and canary-yellow throat. Flowers perfectly placed on long strong stems. A robust grower. **11c each; 90c per 10; \$7.00 per 100.**
- Joe Coleman.** Bright red with carmine blotchings in throat and on lower petals. Flowers large and ruffled. Strong growing and even blooming. **10c each; 80c per 10; \$6.00 per 100.**
- Lily White.** Creamy-white shading to cream at center; very early; good cut flowers. **9c each; 70c per 10; \$5.00 per 100.**
- Los Angeles.** A beautiful shrimp pink with showy orange carmine blotch in throat. Tall graceful stems with flowers well placed. **13c each; \$1.10 per 10; \$8.00 per 100.**
- Louise.** Orchid lavender with deeper blotch in throat, a refined color combination; wide open flowers on strong stem. **10c each; 80c per 10; \$6.50 per 100.**
- Mrs. Francis King.** A most effective variety for decorations. Spikes extra long; flowers brilliant pink, blazed with vermilion. **7c each; 50c per 10; \$3.50 per 100.**
- Mrs. Frank Pendleton.** Of the largest size and most exquisite color. Delicate flushed salmon pink with rich maroon blotch on the three lower petals. **8c each; 60c per 10; \$4.00 per 100.**
- Mrs. Dr. Norton.** Large white flowers, the edges suffused with soft pink. The lower petals have a blotch of sulphur yellow stained with fine specks of pink. **11c each; 90c per 10; \$7.00 per 100.**
- Mrs. H. E. Bothin.** Geranium pink with salmon tint; flaming scarlet center, making a very striking color combination. Heavily ruffled flowers well placed on strong stem. A leader. **10c each; 80c per 10; \$6.50 per 100.**
- Mrs. Leon Douglas.** Begonia rose, striped with flame scarlet, lower petals pale lemon yellow flecked with ruby. Considered one of the largest gladioli. **15c each; \$1.25 per 10; \$11.00 per 100.**
- Niagara.** Primrose-yellow striped and splashed with bright pink. Large flowers on good strong spike. A favorite sort. **10c each; 80c per 10; \$6.50 per 100.**
- Orange Glory.** Deep orange with carmine blotched throat, creamy white stripes on lower petals; heavily ruffled flowers on strong stem. Very vigorous, sturdy growth with broad foliage. Extra desirable for landscape work. **12c each; \$1.00 per 10; \$8.00 per 100.**
- Panama.** Rich rosy pink. Large fine flowers. **9c each; 70c per 10; \$5.00 per 100.**
- Peace.** White with pale violet feathering on lower petals. Very large flowers well placed on a tall graceful spike. Should be planted early. **8c each; 60c per 10; \$4.00 per 100.**
- Peach Rose.** Deep rose pink with rose red blotches in throat. One of the finest in its color class. **12c each; \$1.00 per 10; \$8.00 per 100.**
- Persia.** Deep mahogany red. One of the deepest of colors in gladiolus. The buds and partly opened flowers are almost black. **13c each; \$1.10 per 10; \$9.00 per 100.**
- Pink Wonder.** La France pink blending with pale pink in throat, with yellow reflex at base of lower petals. Immensely large flowers. **10c each; 80c per 10; \$6.50 per 100.**

GIANT NYMPH

NOT LESS THAN 5 OF ANY ONE VARIETY SUPPLIED AT THE 10 RATE
AND NOT LESS THAN 25 AT THE 100 RATE

GLADIOLUS—Continued

Prince of Wales. The flowers are large and well placed and the color a charming shade of coral pink. **9c each; 70c per 10; \$5.00 per 100.**

Purple Glory. Deepest velvety maroon with almost black blotches. Large ruffled flowers on very tall, sturdy stems. One of the largest flowered sorts. **16c each; \$1.40 per 10; \$12.50 per 100.**

Romance. Orange salmon rose with red and yellow throat. A bluish border surrounds each petal. A very odd combination. **10c each; 80c per 10; \$6.50 per 100.**

Scarlet Wonder. Mammoth flowers of pure deep scarlet. Stiff erect stems bearing many flowers open at one time. One of the largest. **16c each; \$1.40 per 10; \$12.50 per 100.**

Schwaben. Very vigorous and free flowering. Color clear canary yellow shading to sulphury yellow when open. **10c each; 80c per 10; \$6.50 per 100.**

Twilight. Creamy buff in color with edges of petals flaked pink. Throat primrose yellow and pink. A splendid ruffled variety. **12c each; \$1.00 per 10; \$7.50 per 100.**

Virginia. A very showy scarlet; large, massive flowers, even in blooming and makes a gorgeous display. One of the best of the red shades. **10c each; 80c per 10; \$6.00 per 100.**

PRIMULINUS HYBRIDS

Alice Tiplady. Bright saffron-orange; large open flowers on strong stiff stems. Excellent cut flower and forcer. **8c each; 60c per 10; \$4.00 per 100.**

Dorothy Wheeler. Pure delicate rose-pink. Flowers well placed on slender, graceful stem. **10c each; 80c per 10; \$6.00 per 100.**

Orange Queen. Pure apricot of a very warm tint; large open flowers on long stem. Justly considered one of the very

choicest novelties in Primulinus Hybrids. **14c each; \$1.20 per 10; \$10.00 per 100.**

Souvenir. The purest golden yellow of all Gladioli. Large, beautifully shaped flowers on tall, slender stem. **10c each; 80c per 10; \$6.50 per 100.**

GLADIOLUS MIXTURES

We recommend these choice mixtures with perfect confidence as they are composed of only the most desirable varieties and can be depended upon to produce a most satisfactory display of magnificent flowers in many shades and colors.

	Each	10	100
Shades of Blue and Violet Mixed	10c.	80c.	\$6.50
" " Pink and White Mixed	8c.	60c.	4.00
" " Scarlet and Red Mixed	9c.	70c.	5.00
" " Yellow Mixed	10c.	80c.	6.00

Primulinus Hybrids Mixed. The flowers range in color from the purest and lightest of yellows to the deepest orange and from the softest shade of pink to scarlet. The flowers are borne on tall, vigorous, branching stems and for graceful and artistic arrangement in vases are unsurpassed. **7c each; 50c per 10; \$3.50 per 100.**

Giant Flowered Mixed. A mixture of the best Giant Flowered sorts in a wide range of shades and colors, and includes many named varieties of special merit. One of the most satisfactory mixtures of Gladioli obtainable and one that is sure to give satisfaction. **7c each; 50c per 10; \$3.50 per 100.**

Single and ten prices include postage. The 100 rate is by express at purchaser's expense.

Not less than 5 of any one variety supplied at the 10 rate and not less than 25 at the 100 rate.

Caladium

Esculentum. Known also as Elephant's Ear. This is one of the finest tropical plants which can be grown in the open air in the north. It can be made to produce three to ten leaves three to four feet long and nearly as wide, on stalks four to six feet high.

The soil best suited to Caladiums is a mixture of fibrous loam, leaf mold, peat and well rotted cow or sheep manure in equal parts, with a sprinkling of sand added. Bulbs may be planted outdoors as soon as danger of frost is over, covering about three inches deep; or for largest growth start early indoors in pots and set out when the weather is warm and settled. But little water must be given to the roots till active growth commences when, as the plants develop, they require an abundance. Humidity and warmth are necessary for their best development.

First Size Bulbs. Nine inches and over in circumference. **25c each; \$2.00 per 10.**

Second Size Bulbs. Seven to nine inches in circumference. **20c each; \$1.50 per 10.**

Third Size Bulbs. Under seven inches in circumference. **15c each; \$1.00 per 10.**

Madeira Vine Sometimes called Mignonette Vine. This tuberous rooted climber of dense, branching growth has thick, heart-shaped, glossy green leaves and delightfully fragrant, small feathery, white blossoms produced in long hanging racemes. It is of rapid growth, and is fine for porches and covering arbors in a single season. Perennial, but take up roots in fall as the plant will not endure frost. **10c each; 80c per 10, postpaid.**

Tritoma Pfitzeri. An improved variety of the plant sometimes called Red Hot Poker. The handsome flowers are produced in large spikes of rich orange-red tinted flower tubes. Plant two feet apart. Tritomas are hardy south of Cincinnati when well covered in winter. In the north, dig up the plants in November, place in boxes with dry earth and store in a cellar. In spring place in a warm, sheltered, well drained spot, preferably with a background of shrubbery. **25c each; \$2.00 per 10, postpaid.**

Tuberose

The flowers of this well-known tuberous rooted plant are waxy-white, double and exceedingly fragrant. They are very useful in bouquets and house decoration.

If early flowers are wanted fill five-inch pots half full of well-rotted cow manure and the remainder with good, rich, sandy soil. Plant the bulbs in this in March or April, water moderately and hasten growth by putting in a warm, light place. When weather has become warm, plunge the pots in the earth out of doors. They will usually flower before cold weather; if they do not, the pots can be brought in and bulbs will bloom in the house.

Double Dwarf Pearl, first size bulbs, **10c each; 60c per 10; \$4.50 per 100.** We will supply second size Tuberose bulbs 5 cents each, 40 cents per 10. *The 100 rates are by express at purchaser's expense.*

TRITOMA (Red Hot Poker)

NOT LESS THAN 5 OF ANY ONE VARIETY SUPPLIED AT THE 10 RATE AND NOT LESS THAN 25 AT THE 100 RATE

About September First next we will issue our Annual Catalogue of CHOICE DUTCH BULBS AND SEEDS FOR FALL PLANTING. It will be sent free to all customers without ordering it, and to others who apply for it.

BOOKS

These books have been carefully selected and we believe they are the best moderate priced publications on the subjects treated, and in so far as they do not conflict with our own directions as heretofore given, we recommend them to our customers.

ASPARAGUS. By F. M. Hexamer. Culture for Home Use and for Market. Planting, Cultivation, Harvesting, Marketing, Forcing, etc. Illustrated. 174 pages. Cloth. Price \$1.10

BEAN CULTURE. By Glenn C. Sevey. A Practical Treatise on the Production and Marketing of Beans. Illustrated. 144 pages. Cloth. Price \$1.00

CABBAGES, CAULIFLOWER, ETC. By C. L. Allen. Gives complete instructions from sowing the seed till harvest, including Brussels Sprouts, Kohl Rabi, Kale, etc. Illustrated. 125 pages. Cloth. Price \$1.10

CELERY CULTURE. By W. R. Beattie. A practical guide for beginners and a standard reference for experienced celery growers. Fully illustrated. 150 pages. Cloth. Price \$1.00

FARM AND GARDEN RULE-BOOK. By L. H. Bailey. A valuable, authoritative and up-to-date compilation of rules and reference tables for farm and garden, planting distances, seed tables, fertilizers, insecticides, weeds, plant diseases, horses, cattle, poultry, etc. 587 pages. Cloth. Price \$3.25

FARMER'S CYCLOPEDIA OF AGRICULTURE. By E. V. Wilcox and C. B. Smith. A practical, concise and thorough presentation of agriculture. Farm, orchard and garden crops, animals, feeding, dairying, poultry, fertilizing, spraying, etc. 6000 topics. 500 illustrations. 700 pages. Cloth. Price \$4.50

GRASSES AND HOW TO GROW THEM. By Prof. Thos. Shaw. A practical discussion of the economic grasses of the United States and Canada from the standpoint of the stockman and farmer. Illustrated. 454 pages. Cloth. Price \$2.00

HOME FLORICULTURE. By Eben E. Rexford. A Practical Guide to the Treatment of Flowering and Other Plants in the House and Garden. Illustrated. 312 pages. Cloth. Price \$1.75

LAWNS. By F. F. Rockwell. Covers thoroughly the building, seeding and care of new lawns as well as practical information for repairing and remaking old ones. Desirable varieties, fertilizers, weeds and their control are also fully covered. Cloth. Price \$1.00.

MANUAL OF GARDENING. By L. H. Bailey. A Practical Guide to the Making of Home Grounds and the Growing of Flowers, Fruits and Vegetables for Home Use. This authoritative book treats fully of the growing of vegetables, fruits and ornamental plants. Illustrated. 541 pages. Cloth. Price \$3.25

MELON CULTURE. By James Troop. The Production of Melons for Home Use and for Market; Forcing, Insects, Diseases and their Control, etc. Illustrated. 118 pages. Cloth. Price \$1.10

ONIONS ON MUCK SOIL. By C. C. Taylor. A concise pamphlet on how to grow onions on muck soil. Paper. Price 10c.

PEAS AND PEA CULTURE. By Glenn C. Sevey. A Practical and Scientific Discussion of Peas. Garden Varieties, Cultural Methods, Insect and Fungous Pests, Peas as Forage and Soiling Crops, Sweet Peas, etc. Illustrated. 102 pages. Cloth. Price \$1.00

STARTING EARLY VEGETABLES AND FLOWERS UNDER GLASS. By C. H. Nissely. Includes details of construction, heating and operating small greenhouses, sash houses, hot beds, cold frames, etc. Cloth. Price \$3.00

THE GARDENER. By L. H. Bailey. A book of brief directions for the growing of the common fruits, vegetables and flowers in the garden and about the house. Illustrated. 260 pages. Cloth. Price \$2.00

TOMATO CULTURE. By Will W. Tracy. Contains complete and reliable information on the Tomato, planting and cultivation, harvesting, packing, marketing, also insect enemies and diseases. Illustrated. 160 pages. Cloth. Price \$1.10

TOMATO PRODUCTION. By Paul Work. Facts and practices relating to Tomatoes are rounded up for everyday use. Planting, Growing, Soil Management, Field Culture, Enemies, Marketing, Returns, Varieties and Seed. 125 Pages. Cloth. Price \$1.25

VEGETABLE FORCING. By Ralph L. Watts. The most complete book on forcing ever issued. Clear and concise instructions covering greenhouse construction, soil preparation, cropping systems, marketing, insects, diseases, etc. Profusely illustrated. 452 pages. Cloth. Price \$3.00

VEGETABLE GARDENING. By Samuel B. Green. A Manual on the Growing of Vegetables for Home Use and Marketing. For Farmers and Gardeners. Twelfth Edition (Revised). Illustrated. 252 pages. Cloth. Price \$1.50

VEGETABLE GARDENING. By R. L. Watts. Complete, concise and authentic. Covers every phase of vegetable gardening. An excellent handbook for practical growers. Cloth Price \$2.50

ADDRESS ALL ORDERS TO D. M. FERRY & CO.,

All Books sent postpaid on receipt of price.

DETROIT, MICH.

A detailed illustration of several yellow flowers, likely Gaillardias, with green stems and leaves. The flowers are scattered across the cover, with some in the foreground and others in the background. The background is a light, textured greyish-blue.
